(Eastick) P 2408; from distillery slop (Lassloffy) P 2563; amino-acid content of com. (Nollau) 2780; international movement of, 2783; (Goodwin) P 2784; prickly pear expts. (Horn) 2952; hops, dregs, yeast (Völtz) 2952; (Remington) P 2953; potato plant as fodder (Völtz) 3107; importance of inorg. constituents of (Zaitschek) 3276; water-sol. N of some common (Hart) 3308; disintegrated straw (Lehmann) 3309; from wood residues (Walker) P 3309; sea weed as fodder (Beckman) 3309; utilization of total brewery waste for (Ulrich) 3309; disintegrated straw (Lehmann) 3309; see also *Molasses*, etc.

Feeding stuffs, analysis, HCN in (Furlong) 490; (Smetham) 828; detg. fatty acids and ether-sol. constituents (Rather) 943; detg. H_3PO_4 in crops (Stutzer) 2121; microscopic exam. (Bruyning) 2269; detg. NH_3 acids in (Grindley) 2407; detecting rice husks in fodder meal (Coen) 2676; Cl in (Filippo) 2951.

Fehling solution, abnormal reaction obtained in testing urine with (Cramer) 1627; history (Pellet) 1699; behavior toward, of org. compds. containing C, H and O (Margosches) 2881.

Fehling-Soxhlet method, modification (Corletti) 38.

Feldspar, potash from (Anon.) 128 (Cushman) 695 (Brown) P 696 (Bassett) P 1230 (Quinney) 2131; chem. nature of, amphibolites (Loewinson-Lessing) 583; red (McDonald) 1160; fertilizer from (Drury) P 1220, 2684; siloxicon or carborundum from (Peacock) P 1278; alkalies and alumina from, etc. (Rody) P 2798, 2799; aventurine (Anderson) 3192.

Felt, comp. for coating roofing- (Halle) P 140; paper-makers' (Stabinsky) P 149; heat-insulating, fabric (Lappen) P 722; roofing, 1381; silk rendered suitable for making (Diesser) P 3133, 3366.

Fenugreek seeds (Wunschendorff) 124.

Fermentation of benzylpyroracemic acid (Rona) 58; formation of AcH in alc. (Buchner) 94; generation of heat by (Mohr) 117; enzymes of *A. oryzae* in, ind. (Takamine) 117; tubes (Lee) 214 (Hall) 470; formation of AcH in, with yeast (Neuberg) 303; alc. (Kostychev) 471 (Nottin) 472 (Paris) 2963; acids and, of sugar (Neuberg) 472; action of fresh yeast in presence of antiseptics (Neuberg) 472; amyl alc., of methylethylpyroracemic acid (Neuberg) 472; lactic acid (Pollak) P 691; of molasses (Molhant) P 691 (Nagel) 1824 (Miroir) 2124; addition to, of grapes (Hugues) 840; of beverages (Scott) P 843; test in feces (Luna) 922; action of acids on alc. (Rosenblatt) 923; pyroracemic acid in alc. (Oppenheimer) 924; formation of lactic acid during alc. (Oppenheimer) 924; Brennereifragen. Kontinuierliche Gärung der Rubensäfte (Sidersky, book) 951; of carbohydrates by yeast (Euler) 1188; residues as feed (Klein) 1190; of sewage (Comp. Claricité) P 1214; influence of radioactive emanations on alc. (Jacquemin) 1221; re-, of yeast ("Becco" Ges. etc.) P 1223; purification of, CO_2 (Nathan-Inst.) P 1223; vat (Thöing) P 1223; of amylaceous material (Molhant) P 1365; frothy, in after-products of cane sugar manuf. (Prinsen-Geerligs) 1701; of saccharin solns. (de Fazi) P 1825; of refined and raw sugar (Foth) 1825; by ultraviolet light (de Fazi) 1825; of sulfite liquors (Ekström) P 1825; bacterial, in the retting of flax (Adam) P 1847; reduction and alc. (Stange) 1928; measurement of yeast (Wolff) 1967; auto- (Molliard) 1798; effect of H ions on (Hagglund) 1791; acceleration by dead yeast (Moufang) 2124; tech. phases of alc. (Owen) 2124; influence of glycerol on alc. (Rossi) 2257; permanent prepns. (Groll) P 2426; intermediate products of alc., in O respiration (Ivanov) 2548; classification of *Streptococci* by (Hopkins) 2549; H_3PO_4 in (Equeter) 2561; waste (Scott) 2561; (Blum) P 2564; gases formed in lactose-peptone, tubes (Chamot) 2679; of table sirups (Owen) 2720; oryzanin and nutrition of fermentative organisms (Kurono) 2791; fermentative activity of blood and organ tissues after pancreatectomy (Stawraki) 2907; food balances and alc. (Völtz) 2919; a. c. and, by yeast (Hägglund) 2920; of pyruvic acid by bacteria (Karczag) 2921; of beer (Windisch) 2965; viscous, of cane juices (Owen) 2993; succinic acid, of α-ketoglutaric acid (Neuberg) 3059; of dihydroxymaleic acid (Neuberg) 3076; stimulating action of Mg salts on lactic (Richet) 3077; ionization of gases produced during (Potter) 3167; butyric acid (Abderhalden) 3255; viscosity and retardation of (Traube) 3258; role of peptone in (Vlahuta) 3266; reactions of streptococci (Broadhurst) 3268; Al paint for wooden fermenters (Heuss) 3325; of sugar to form acetone and EtOH (Bayer) P 3326.

Ferments, action of eosin on (Zeiss) 814; vinification by, other than wine yeasts (Martinand) 1221; of rum (Kayser) 1658; making diastases and toxins by oxidizing (Bordin) P 2129; bread making and butyric, in Latium (Perotti) 3308; of rum (Kayser) 3322; see also *Enzyme action; Enzymes;* and the individual ferments.

Fern, prothallia (Isaburo-Nagai) 218.

Ferric chloride. See *Iron chlorides.*

Ferricyanides (Williams) 275; detection in presence of ferrocyanide, cyanide and thiocyanate (Feigl) 1018.

Ferrite halos (Grengg) 188.

Ferri-urea persulfate (Barbieri) 2852.

Ferro-aluminium, fixing N on (Soc. gén. des nitrures) P 1375.

Ferro-chromium, C-free (Goldschmidt) P 438; aluminothermic manuf. of (Goldschmidt) P 1455; analysis (Schilling) 2362.

Ferrocyanides, products related to (Cambi) 452; detn. of, with bromates (Koninck) 768;

Digitized by Google

detection of bromides in presence of (Curtman) 898; detection in presence of ferricyanide, cyanide and thiocyanate (Feigl) 1018; and $Hg(CN)_2$ (Strömholm) 1437; acid, of dimethyl-*p*-aminophenol and *p*-hydroxyphenyltrimethylammonium (Lagutt) P 2291; vol. estn. (Campbell) 2855.

Ferroferricyanide. See *Prussian blue.*

Ferromagnetism. See *Magnetism.*

Ferro-manganese liquid, in steel processes (Sahlin) 1294; Ferromangan als Desoxydationsmittel im festen und flüssigen Zustand und das Ferromanganschmelzen (Rodgnhauser, book) 2869.

Ferro-phosphorus (Miller) P 50.

Ferropyrroles (Oddo) 795.

Ferro-silicon, prep. of chlorides of Si from (Martin) 1017; (Harrison) P 1278; manuf. and properties (Hardén) 1294.

Ferro-tungsten, prepg., from ores (Becket) P 3049.

Ferro-vanadium, detg. Mn in (Clark) 1018; tech. exam. (Heinzelmann) 2044; (Bleecker) 2758.

Fertility. See *Soils.*

Fertilisation, membrane of echinoderm egg (McClendon) 1513; butyric acid and (Brachet) 2390; see also *Fertilisers.*

Fertilizer experiments, action of $(NH_4)_2SO_4$ and NH_4 superphosphate in calcareous soils (Wlodeck) 116; duration of action of manures (Hall) 232; critic-sol. H_3PO_4 and potash (Waggaman) 232; green manuring (Hutchinson) 233; with sugar beets (Schneidewind) 233, 2122 (Gerlach) (Kruger) 1219 (Munerati) 3113; barnyard manure and bacteria of soils (Brown) 347; with tobacco (Mathewson) (Anderson) 348 (Trichereau) 838; with corn (Harris) 502; with strawberries (Vercier) 502; with CO_2 (Quarrie) 684 (Fischer) 2559; and maturity of cotton (Williams) 685; influence of phosphatic and potash fertilizers on meadow hay (Dussere) 838; with sugar cane (Salitre) 869 (Eckart) 870; with carnations (Dorner) 1219; yields of stable and green manure and CO_2 (Bornemann) 1362; in Ratibor-plania (Otto) 1652; action of radioactive fertilizers on sugar beets (Crochetelle) 1653; with salicylaldehyde (Schreiner) 1653; germinative force of seeds of *cuscuta trifolii* (Morettini) 1797; in Hawaii (McGeorge) 1816 (Wilcox) 2417; N fertilizers compared with liquid manure and N compds. from air (Krüger) 1817; with decompn. products of $CaCN_2$ (Kappen) 1818; with humus preps. (Haselhoff) 1963; with $K_4Fe(CN)_6$ (Haselhoff) 1963; pot tests compared with field trials (Coffey) 2281; Woburn pot culture (Voelcker) 2281; ammonifications (Given) 2559; with corn and cotton, S. Car. (Keitt) 2789; with coffee berry (Anstead) 2789; action of free S on plants (Bosinelli) 2790; is kainite fertilization economic as to water? (Gerlach) 2789; loss of lime in soil and kainite fertilization (Gerlach) 2789; see also *Fertilisers, nitrogen,* etc.

Fertilizers, S, for alfalfa (Reimer) 116; citric-sol. H_3PO_4 and potash (Waggaman) 232; potash in mixed (Keitt) 348; intern. movement of 501, 2789; radioactive substances as (Ross) 502; (Keep) 503; fish meal and manure 684; need of, detd. by chem. exam. of leaves (Wagner) 685; changes in stable manure during storage and its action in soil (Löhnis) 836; liquid manure (Liechti) 836; fish waste as (Turrentine) 836; escape of NH_3 from soil treated with liquid (Liechti) 947; "Endlaugenkalk" (Ehrenberg) 948; base goods (Lathrop) 948; manure storage (Russell) 948; state tonnage 948; value of aboveground parts of cereals and leguminous plants (Mikulowski-Pomorski) 1086; kieselguhr and waste sulfite liquor (Kern) 1086, 1362; sewage sludge (Wilson) 1212; in import trade 1217; from fish and marine animals 1218; bacterized peat 1218; Ra as (Hopkins) 1218; chemist and (Wallace) 1361; NaCl as (Gonehalli) 1362 (Söderbaum) 1525; bacteriol. effects of green manures (Briscoe) 1362; trade in art., in Austria Hungary (Dafert) 1524; road sweepings 1525; Guida practica per la concimazioni (Marescalchi, book) 1526; I concimi e le concimazioni (Forti, book) 1526; flue dust from Fe works as 1651; from dog fish (Young) (Martell) 1651; (Shutt) 1652; (Ince) 1819; compn. and use of new materials—value of by-products (Haskins) 1652; weeds as (Kling) 1652; green manuring 1653; in New York (Van Slyke) 1817; for coffee 1819; Germany's provision with (Rassow) 1962; for sugar beets (Störmer) (Stutzer) 2122; fish (Lindemuth) 2280; wool and leather wastes (Russell) 2281; systematic scheme for work with (Stuart) 2418; farmyard manure (Berry) 2418; V as (Ramirez) 2418; from Imhoff tank sludges (Lipman) 2558; from municipal waste (Turrentine) 2558; bat guano (Aceton) 2559; prickly pear as (Johnston) 2559; municipal plant at Los Angeles (Heinly) 2684; compn. and value of farm manures (Jensen) 2684; absorption in diff. growth phases of sugar beet (Calzolari) 2789; valuation of, from growing pigs (Crowther) 2962; fertilizing power and harmfulness of (Vivien) 2962; Am. Fertilizer Handbook (book) 2963, 3321; Residui agricole (Formenti, book) 2963; I campi sperimentali di concimazione chimica (Manville, book) 2963; Soils and, Discussion on Nature and Treatment of Soils and Value of (Quear, book) 2963; effect of green manuring on soil nitrates (Hill) 3320; (Rhenania) P 3321; Brit., works, 3332. *Patents:* from leather scrap (Moise & Co.) 117; org. (Pluszeski) 117; (Black) (Willson) (Herrmann) (Wilson) (Melasseschlempe) 349; from combustion products from gas engine (Heine) 503; fertilizing seed grain (Buckley) 687; (Kern) 950; (Hilliard) 1087; from waste matter (Krottnauer) 1087;

Digitized by Google

(Keegan) 1220; from waste liquor after sepn. of sugar from molasses (Sinsheimer) 1363; (Leblanc) (Aucher) (Chem. Fab. Weiler-ter-Meer) 1364; (Messerschmidt) (Melassechlempe) 1526; sol., from meat or fish (Bohon) 1654; sifter and comminutor (Akt.-Ges. Chem. Prod. Fabr.) 1708; (Black) (Chem. Fabr. Rhenania) 1819; incubation tower and manure chambers (Beccari) 1964; (Willson) (Kern) (Twynam) P 2282; non-hygroscopic (Wilkening) 2283; (Willson) (Kern) P 2419; (McAdams) (Twynam) (Gerlach) 2420; (Washburn) 2790; contg. cyanamide (Frank) 3115; see also *Calcium cyanide; Phosphates; Phonolite; Potash; Thomas meal; Slags*, etc.

Fertilizers, analysis, vol. detn. of K in (Ajon) 3188; N in (Hare) 3318; potash in (Jarrell) 3318; (McDonnell) 3318.

Fertilizers, calcium, liming (Thorne) 502 (Tacke) 1217; (Aucher) P 1364; see also *Calcium cyanamide*.

Fertilizers, manganese (Fisher) 684; sulfate and carbonate (Ippolito) 838; (Stein) P 2420.

Fertilizers, nitrogen, $NaNO_3$ *vs.* $(NH_4)_2SO_4$ (Pospisil) 116; NH_3 (Bodin) P 349; utilization of org. N of manures (Von May) 501; N of processed (Lathrop) 501; value of guanidine nitrate and urea nitrate compared with $NaNO_3$ and NH_4NO_3 (Wagner) 502; for grain (Venerosi-Pesciolini) 685; NH_4 salts contg. thiocyanate (Stutzer) 686; atm. N (Kraisy) 836; $NaNO_3$ and $(NH_4)_2SO_4$ production (Bradbury) 1217; from refuse (Elschner) 1217, 2418; top dressing with Chile nitrate (Kiehl) 1362; (Washburn) P 1526; (Hempel) 1651; efficiency of (Oswald) 1651; fermented molasses as (Vita) 2121; availability of org. N (Breckenridge) 2558; action on soils (Tacke) 2559; (Dettifos Co.) P 2791 ; urine as (Hempel) 3113; see also *Calcium cyanamide*, etc.

Fertilizers, phosphorus, locking up of, in Java soils (Jongh) 116; action of H_3PO_4 of steamed bone meal (Alexander) 116; non-hygroscopic (Stoltzenberg) P 116; (Downs) P 349; sol. phosphate (Beckman) P 349; di-Ca phosphate (Norsk Hydro- etc.) P 504; comparative results with (Gilchrist) 684; pptd. bone (Jenkins) 684; from phosphate rock (Cowles) 687; (Willson) P 839, 2420; (Dickson) P 1220; accumulated fertility in grass land from (Somerville) 1362; (Reichelt) P 1363; acid-phosphate (Pratt) P 1654; rendering phosphate rock available as (Landis) P 1654; [illegible] of Ca phosphates and their application [illegible] 1817; (Naegell) 1819; (Crippa) P [illegible] root system of beets (Sazanov) [illegible]) 2560; (Meriwether) P [illegible] phosphorite (Snodgrass) [illegible] t flour and [illegible]9; compara- Hartwell) ing effect erbaum)

3319; detn. of availability of potash in feldspathic (Miller) 3318.

Fertilizers, potassium phonolite (Wagner) 501; substitutes for Stassfurt potash salts (Söderbaum) 685; (Herzfeld) P 686; from kelp (Turrentine) 1218; and legumes (Barontini) 1219; from feldspar (Drury) P 1220, 2684; from kelp (Turrentine) 2418; fermented molasses as (Vita) 2121; availability of potash (Vanatta) 3319.

Ferula galbaniflua (Marsden) 3328.

Fever, swine (Uhlenhuth) 101; sp. hypersensitiveness of heat centers—direct heating and cooling of heat center (Hashimoto) 2268; protein metabolism in (Kocher) 2928; epinephrine (Cloetta) 2938; increased protein decompn. and heat formation in infectious (Mansfeld) 2934; Rocky Mt. spotted (Smith) 3098; chem. heat regulation (Mansfeld) 2935; see also *Pyrogenesis*.

Fiber-board (Geddes) P 2296.

Fibers, waxes of textile (Higgins) 246; solidonia (Werner) 382; technology of paper-making (Bromley) 713; in 1913–14 (Massot) 1250; swelling of textile, on immersion in water (Justin-Mueller) 1251; bleaching of wool (Musgrave) 1693; from various sources 1693; content and fuel problem in sugar factory (Cross) 1701; heat of hydration of textile (Testoni) 2595; from hop vines (Reinke) 2708; injury of vegetable, during bleaching (Weyrich) 2816; structure of, as related to pulp and paper (Lee) 2979. *Patents:* vegetable (Beljaeff) 150; -extg. machine (Jackson) 259; softening textile (Marx) 382; scraping and scutching (Lagatinerie) 385; prepg., for spinning (Streiff) 1123 (Kübler) 1251 (Greeger) 1997; aging (Joseph) 1124; from cotton and like seeds (Segundo) 1251; softening and strengthening degummed (Burton) 1253, 3366; bleaching vegetable (Watremez) 1395; treating short and slippery (Muntz) 1395; from old cordage (Funke) 1396; (Schimmel & Co.) 1396; for spinning or paper-making (Freeman) 1546; cleansing comp. for (Bertlett) 1549; treating, with O_3 (Gminder) 1550; bleaching (MacIlwaine) 1550 (Jardine) 1847; sepg., from printed paper (Winestock) 1691; treating textile (Leech) 1694; washing vegetable (F. Krupp A.-G. etc.) 1998; from resinous wood (Whitaker) 2311; recovering, from waste portions of cotton plant (Marsden) 2311; from viscose (Ver. Glanzstoff-Fab. A.-G. 2458; fireproofing (Eichengrün) 2597; bast, of linden, lime or willow wood (Waganoff) 2712; spinning, from osier bark (Petz) 2712 (Oesterreich, etc.) 2434; defatting (Netz & Co.) 3373; see also *Cotton; Crude fiber; Dyeing; Fabrics; Spinning; Textiles; Wool*, etc.

Fibrillation, ventricular, under $CHCl_3$ anesthesia (Levy) 107.

Fibrin (Bosworth) 810; reaction occurring in living cultures of frog tissues (Baitsell) 2905;

Digitized by Google

indole from digestive products of (Moraczewski) 2907.
Fibrinogen, deficiency in hemophilia (Hess) 3293.
Fibrinolysins, tissue (Fleisher) 2390.
Fibrinolysis in hepatic insufficiency (Goodpasture) 482.
Fibrofn, conversion into nitrofibroin (Johnson) 2657.
Fibroinxanthoproteic acid, conversion of fibroin into (Johnson) 2657.
Fibrous substances, stamping (Bermig) P 699; transmission of X-rays through (Nishikawa) 888; fireproofing and waterproofing felted and (Kristensen) P 2972.
"Fibrox" (Weintraub) 1276, 2352.
Fiehe reaction in mixed honeys (Lüning) 1811.
"Fields of force" theory (Hantzsch) 3234.
Filaments (Kasazawa) P 150; see also *Lighting, electric filaments.*
Filings, d. of metallic (Lowry) 2756.
Fillers for reaction towers and regenerators (Ludwig) 258; behavior toward dyestuffs (Possanner) 964; *Patents:* for ironing textiles (MacKenzie) 155; shoe-bottom (Thoma) 253, 393, 1374, 1703 (Woodward) 1554, 1555 (Snell) 2995; for boots (Woodward) 394; for leather (Krug) 730; for rubber tires (Oliver) 731; (Heimann) 956; for wood (Harris) 972; puncture-closing mixt. for pneumatic tires (Baker) 1135; element for packed towers (Nitrogen Co.) 1230; mattress (Maggia) 2699.
Filling high pressure cylinders (Mewes) P 1100; ampoules (Stick) 3326; see also *Teeth.*
Filling apparatus for molds (Lichtenberger) P 517; for glass forms (Severin) P 519; for ampoules (Murat) 2611.
Fillmasses, detg. viscosity of (Roubínek) 2605.
Films between a liquid and its satd. vapor (Mebius) 2022; oil- and paint- (Öl und Farbfilm-A.-G.) P 2319; stability of liquid (Phillips) 2339; from viscose (Ver. Glanzstoff-Fab. A.-G.) P 2590; of nitrocellulose (Berl) P 3359; see also *Photographic films.*
Filter, action between clay, and salt solns. (Hicks) 38; operation of Oliver (Morrison) 47; economics of sewage (Fuller) 113; solns. from ore slimes (Salisbury) 195; air (Kister) 344; light (Mees) 398 (Getman) 1892; stand, 537; effect of filtration through Berkefeld, on coagulability of oxalated plasma (Goddard) 633; continuous, 873; pipet- for ether (Pickel) 873; calcn. of capacity of smooth (Wolter) 1587; asbestos (Grossfeld) 1724; oil, 1842; gas washing app. with enclosed (Weaver) 1861; active wave lengths of color (Pirani) 2030; charcoal, for waste gases from $(NH_4)_2SO_4$ manuf. (Reinhard) 2143; washer (Pickel) 2329; suction (Takamine) 2469; emptying device (McNutt) 2997; for ultraviolet light (Peskov) 3021; for smoke (Gautier) 3122. *Patents:* For liquids or gases (Porter) 4; for liquids (Kiefer) (Genter) 4 (Pulsometer Eng. Co.) 540 (Deacon) 1262 (Linden) 2332 (Kneuper) 2472; for smelter fumes (Gagnon) 50; for colloidal materials (Kreszewski) 133, 3147; for treating water with radioactive material (Cousens) 176; for C_2H_2 (Corn) 243; metallurgical (Spence) 290 (Faber) 1600; for brewers' mash (Schaefer) 350; medium (Pott) 359; (Kiefer) 539; air and gas (Dinglersche Maschinenfab. A.-G.) 540; plant (Roset) (Cupis) 540; for cyanide solns. from ore slimes, etc. (Trent) 592; air (Bollinger) 733; for milk (Poupart) 829; for beer (Bearman) 843; (Bowser & Co.) 874; for ore-slimes, etc. (Osgood) 1026 (Butters) 1456 (Lass) 2220 (Holderman) 2376 (Kelly) 3216; for whiskey, wine, beer, etc. (Youngman) 1091; (Muirhead) 1138; cylinders (Franz) 1235; cleaning (Candy) 1262; for ore pulp (Faber) 1296 (Vandercook) 1455; for lubricating oils (Richardson) 1559; for sewage (Davidson) 1647; for wort (Schaefer) 1658; gasoline (Gwynn) 1689; for oil (Morris) 1689 (Warden) 1707 (Emory) (Rogers) 2587 (Bithrie) 2613; for sugar juices (Dibbets) 1702; rotary (Schütz) 1862; (Olivier-Alphand) 2010; tar (Rhodes) 2307; for C_6H_6 (Smith) 2472; bone-black (Jaraczewski) 2573; for solns. from ores (Holderman) (Hoffman) 2638; for corrosive liquids, etc. (Brockbank) 2726; (Stedman) (Butters) 2726; (Lelarge) 2727; for purifying naphtha and gasolene (Cronenberger) 2814; (Meissner) 3147; (Berrigan) 3147; see also *Ultrafilter; Water, purification of (filtration); Filter press.*
Filter cloths, fabrics for (Morson) P 2818.
Filtering material (Porter) P 130; (Metallbank etc.) P 133; (Jaraczewski) P 1374; (Kern) 2443; washing (Union-Werke, A.-G. etc.) P 2577.
Filter paper, toughening (Rankin) 2707; for tannin solns. (Small) 2722.
Filter press (Salisbury) P 195; for treating sugar-beet pulp, etc. (Wagner) P 251; in sugar manuf. (Wesely) 391; elements (Haag) P 399; (Rachel) P 540; plates, 1679; (Eberhard) P 2168; new process (Ulzer) 2726; discharging filter cake from (Butters) P 2801 (Filter- u. Brautech.) P 3147; (Sweetland) P 3147.
Filtration, sepg. solids from gases in filtering bags (Playter) P 4; vacuum pump for, systems, 166; funnel (Friedrichs) 257; in detn. of humus (MacIntire) 346; (Nagel) 539; effect of, through Berkefeld filter on coagulability of oxalated plasma (Goddard) 633; bone black, for sugar houses (Kent) 868; Berkefeld, of complement (Schmidt) 1198; multiple, under pressure (Missong) P 1263; gel, of ultramicroscopic particles (Coplans) 1341; resistance of vaccine virus to (Green) 1344; of ore pulp (Vandercook) P 1742 (Kelly) P 3216; of molten metal (Seyboth) P 2378; of sugar juice (Guijarro) 2720; see also

Digitized by Google

Ultrafiltration; Water, purification of (filtration).

Finishing, art. silk (Schneider) 720; prepn. for textile inds. (Micksch) 1996; *Patents:* For plaster (Ramsey) 854; yarns and fabrics (Hermsdorf) 861; enamel-like, on wood (Jirotka) P 1127; steel plates (Ridd) 1296; wooden articles (Adler) 2460; plates (Forbeser, etc.) 2800; cotton fabrics (Heberlein & Co.) 3133; rust-proof black, on Fe or steel (Atuesta) P 3216.

Fir, available for paper pulp (Brown) 1113.

Fire, risks in slaking lime (Wawrziniok) 240; smut, in threshing separators 716; preventing, in stored briquets (Grätz) P 1388.

Fire-bricks. See *Bricks.*

Fire damp. See *Methane.*

Fire extinguisher, flue gas as (Harker) 1241; *Patents:* For oil tanks, etc. (Bartels) 147 (Erwin) 1994; gaseous (Hughes) 259; pipe system and CO_2 (Aktiebolaget Lux) 1228; for oil (Fagan) 2587; (Aylsworth) 3119; dry (Intern. Feuerlöscher-Ges.) 3339.

Firefly. See *Lampyridae.*

Fireproofing, gypsum as, material (Marani) 364; wood and textiles (Moll) 1250; *Patents:* wood or textiles (Zeller) 140; cotton (Perkin) 384; wood (Tumminelli) 704; paper, wood or cloth (Scharwath) 1535; paper cartridges (Clyne) 1547; roofing material (Maschke) 1837; fibers (Eichengrün) 2597; fibrous and felted substances (Kristensen) 2972.

Fireproof products (Schlossberg) P 1235; (Endell) 2009.

Firing, construction for solid fuels (Pradel) 520, 961, 1682, 3349; of gases by adiabatic compression (Crofts) 1573; ceramic (Schmatolla) 1676; with bituminous fuel (Fevér) P 3355; atomizing burners for oil- (Essich) 3356; ind. oil, installations (Schmitt) 3356; see also *Burning; Combustion.*

Fisetin, synthesis (Auwers) 1056.

Fish, respiratory exchange in fresh water (Gardner) 108; digestive enzymes and poison (Konstanov) 654; meal and manure 684; waste as fertilizer (Turrentine) 836; life preservation law (Eberts) 1210; as source of oil and fertilizer (Anon.) 1218 (Young) 1651; fertilizers (Martell) 1651 (Lindemuth) 2280; relation of fat content to its habitat (Polimanti) 1808; menhaden ind. of Atlantic coast (Greer) 2312; utilization of salmon cannery waste (Turrentine) 2321; reaction of salt water, to decompn. products normal to sea water (Shelford) 2947; reflex action of O content of water on respiration of (Petrik) 2947. *Patents:* Food product from (Lamb) 673; preserving (Ivale) 2409; tanning, skins (Bendixen) 2466; smoking (Schwenger) 3108; see also *Shell fish.*

Fish meal (Haselhoff) 489; 684; feeding expts. (Klein) 1190, 2262, 2274.

Fish nets (Dorp) 2324.

Fish oils, substitute for linseed oil (Waentig) P 726; decolorizing and deodorizing (Bergius) P 867; (Anon.) 1218 (Young) 1651; expressing (Schueler) 1707; menhaden ind. of Atlantic coast (Greer) 2321; from salmon cannery waste (Turrentine) 2321; extg., from refuse (Adamson) 2323; deodorizing (Oelwerk Berlin) P 2821 (Padoa) P 2822; detection (Davidsohn) 3138; utilization in soap, stearin and fatty acid ind. (Keutgen) 3138.

Fistula, curare poisoning in Eck (Polimanti) 661; acidity of undil. normal gastric juice from case of human gastric (Menten) 3073.

Fixation of dry plates and developing in one operation (Valenta) 272; fixing bath (Schmidt) 1014.

Fixation reactions. See *Complement fixation.*

Flames, reactions (Bancroft) 167, 1573; CO and NO in (Terres) 242; inner cone of Bunsen (Ubbelohde) 242, 366; velocities in mixts. of CH_4 and air (Parker) 378, 1692; photographic analysis (Dixon) 379; propagation (Burgess) (Wheeler) 379; electrolytic (Bancroft) 404; treating incandescent mantles with hardening (Knoedler) P 522; Bunsen, spectra of alkali metals (Theissen) 549; gas 707; velocities in gas and dust explosions (Morgan) 716; action on gas light chimneys (Schaller) 852, (Reis) 994; inner cone of hydrocarbon (Bubnov) 995, 3014; elec. conduction in (Thieme) 998; Elec. Properties of (Wilson, book) 1428; formation of colloidal solns. by (Donau) 2170; electrodeposition from (Thieme) 2347.

Flasks, NH_3 distn. (Wempe) 257; volumetric 419; for detn. of water in flour and meal (Cox) 828; vacuum-jacketed (Hinkel) P 973; for sterile liquids (Levy) P 982.

Flavones, addition of auxochromes (Perkin) 1311; Ueber die Verwandschaft der Anthocyane und Flavone (Willstätter, Mallison, book) 1919; synthesis of (Jacobson) 2222, 2762; as farina of *Primula* (Müller) 2549.

Flavoring materials, org. (Cohn) 464, 937; exts. of tea, camomile, orange, etc. (Schmidt) P 1081; for cod-liver oil (Beringer) 1094; for cottonseed oil, butter, etc. (Sulzberger) P 1813; rept. on exts. in 1912 (Paul) 3105.

Flax, nutrient requirements (Csókás) 502; feeding value of, shives (Lindsey) 1355; bacterial rusts of flaxseed for detg. fiber and waste of, stems (Domracheva) 1693; retting (Durand) 2816; *Patents:* treating degummed, fibers (Burton) 155, 3366; cleaning (Fiber Corporation, Ltd.) 385; heat-insulator from, straw (Lappen) 722; prepg. for spinning (Summers) 864; retting (Toles) 1395 (Adam) 1846 (Feuillette) 2818; bacterial fermentation in retting of (Adam) 1847; straw (Lappen) 3336.

Flesh. See *Meat.*

Flies, destruction of larvae in horse manure (Cook) 1359, 3313; destruction in war zones (Roubaud) 2279.

Digitized by Google

Flindersine, and Br deriv (Matthes) 1661.
Flint. See *Quartz*.
Floors, rept. of comm. for, preps. (Kreis) 971; exam. of, waxes (Besson) 971, 2459. *Patents:* comp. for (Merrylees) 131 (Rössler) 704 (Barter) 1681; plastic covering (Wailes, Dove & Co.) 1238 (Cowan) 1837 (Lizierl) 1987 (Denny) 2581; flooring similar to linoleum (Hüneke) 1399 (Traeber) 2140; rubber (Johnston) 2008.
Flores cinae (Os) 123.
Floridin, action on unsatd. compds. (Gurvich) 3005.
Flotation ore (Primosigh) P 291; (Callow) P 391; (Appelquist) P 783; (MacDonald) P 1297; (Rork) P 1455; (Bacon) P 1743; (Higgins) 1744; (French) 2210; (Livingston) P 2377; (Moxham) P 2758; in Au metallurgy (Blyth) 1737; progress (Ralston) 1740; testing oil for, process (Coutts) 2054; froth, sepn. of metallic sulfides from slimes (Owen) P 2055; preferential (Ralston) 2210; at Inspiration Mine 2369; at Washoe Reduction, Works (Mathewson) 2636; pneumatic 2864; (Hebbard) 2868; testing machine (Smith) 3199; selective, of Pb and Zn sulfides (Owen) P 3216; see also *Ores, treatment of.*
Flour, detection of additions of rye to wheat, (Fanto) 109; "dry shortening" (Estabrook) P 110, 227; bleached (Haley) 224 (Neely) P 2408; richness in gluten (Hitier) 226; treating (Wesener) P 338 (Herendeen) P 339 (Levin) P 674 (Shackleton) P 2408; sulfates in (Cripps) 489 (Elsdon) 1642; detection of adulteration (Thöni) 490; acidity—bleaching —sulfates and lime in (Thomson) 667; effects of N peroxide on (Moore) 667; botanical analysis of (Buchwald) 668; detn. of water in (Cox) 828; detg., in bread (Meurs) 943; (Scheringa) 1204; chemist and, ind. (Wesener) 1354; (Andrews) P 1516; (Larabee) P 1517; 1642; detg. fiber in (Bauer) 1809; exam. for potato (Bengen) 1809; variation in weight of, during storage (Sanderson) 1950; wheat, as skin application (Unna) 1971; microscopy of (Posner) 2271 (Testoni) 2951; estg. CO_2 in (Macara) 2272; chem., baking and storage tests (Swanson) 2272; baking without grain (Fornet) 2406 (Ostwald) 2676; moisture treatment (Buchwald) 2407; sugars as partial substitutes for, in bread (Jelinek) 2781; modification occurring during baking (Kaining) 2780; baking qualities (Harcourt) 2951; com. valuation of (Jacobs) 2951; digestibility of proteins from (Rammstedt) 2952; nutritive value of wheat, and bread in relation to P fertilizers (Masoni) 3308.
Flow, in capillary tubes (Sorkau) 17, 2022; of viscous fluids through pipes (Lees) 405; gaging stream (Collett) 2954 (Peaslee) 2955; aspirating gas tank of uniform rate of (Gautier) 3123.
Flowers, prepg. paper for art. (Böhmer) P 1115; coloring matters of (Willstätter) 1308.
Flue dust, recovering metal oxides from (Downs) P 259; alkalies from, of cement kilns (Newberry) P 364; recovery of metals from (Billard) P 594; recovering K compds. from (Peacock) P 696; nodulizing (Borch) P 590 (Downs) P 781 (Meyer) P 2506; treatment of smelter (Westby) 1594; from Fe works as fertilizer 1651; recovery of Fe (Baggaley) 1737; removing, in garbage incinerating plants (Vesuvio, A.-G. etc.) P 2557; sintering plant 2636; recovering alkalies from, of cement kilns (Newberry) P 2703; mixing, with molten Fe, Cu mat, etc. (Baggaley) P 2726; recovery and treatment of (Gautier) 3122; see also *Dust.*
Flue gas, detg. CO_2 in (Heath) P 258; sepg. smoke from warm, from boilers (Garbarini) 533; drying bricks with 959; excess in boiler furnace practice (Nisbert) 961; for fire extinction (Harker) 1241; analysis (Dosch) 1683; Furnace Efficiency, Combustion and (Peebles, book) 2977; reduction of SO_2 content in (Donath) 3349; thermoelec., tester 3350.
Flues, areagrams of open hearth furnace (Mitchell) 1737.
Fluid crystals. See *Liquid crystals.*
Fluidextracts, manuf. (Ramsay) 512; see also *Extracts.*
Fluidity, an additive property (Scarpa) 169; and heat of fusion (Guzmán Carrancio) 740, 3148; of strong solns. (Tucker) 2026; of aliphatic acids (Dunstan) 2173; (Rossem) 3148.
Fluids, flow of viscous, through pipes (Lees) 405; upset of, balance in obesity (Düring) 821; convection of heat from small cylinders in stream of (King) 1004; similarity of motion in relation to surface friction of (Stanton) 1568; compn. of tissue, in normal and nephritic animals (Boycott) 2105; detg. sp. heats of (Heydweiller) 2181.
Flume sheets, corrosion of metal (Harris) 2757
Fluoboric acid in analysis of Na (Mathers) 1730
Fluophosphates, ternary (Slavik) 1160.
Fluorene series, syntheses in (Gallas) 3226.
Fluorescein, addition products of, with quinoline and pyridine (Oddo) 74.
Fluorescence of gases excited by ultra-Schumann rays (Steubing) 16; of I vapor (Westphal) 16 (McLennan) 408; light absorption and (Baly) 1001; photo-active cells with fluorescent electrolytes (Thompson) 1002; in microchem. analysis (Lenz) 1785; of uranyl salts under X-rays (Wick) 2186; of frozen solns. of uranyl salts (Howes) 2734; of components of chlorophyll (Wilschire) 2922; polarized, of NH_4 uranyl chloride (Nichols) 3020; of Na vapor (Strutt) 3163, theory of (Baly) 3163; "green," of X-ray tubes (Jackson) 3168.
Fluorides, detg. Fe in presence of (Barnebey) 1728; complex (Geb. Siemens & Co.) P 2802
Fluorine in mineral waters (Gautier) 829 and

Digitized by Google

vegetation (Gautier) 1361; Le fluor (Moissan, book) 1883.
Fluorine, analysis (Adolph) 3188.
Fluorine acids, salts of complex (Gebr. Siemens & Cie) P 1102.
Fluorine compounds, aryldiazo (Bart) P 1830.
Fluorite, -yttrofluorite group (Vogt) 575.
Fluoroalcohol (Swarts) 442.
Fluorobenzamides (Slothouwer) 1314.
Fluorobenzene, nitration (Swarts) 443.
4-Fluorobenzhydrol (Koopal) 2648.
Fluorobenzoic acids and derivs. (Slothouwer) 1341.
Fluorobenzoyl chlorides (Slothouwer) 1314.
β-Fluoroethyl alcohol (Swarts) 442; and *acetate* (Swarts) 3227.
o-Fluoronitrobenzene (Swarts) 443.
Fluoronitrobenzoic acids (Slothouwer) 1315.
Fluorspar, production in 1913 (Buchard) 515; *phosphorescence* of (Formhals) 551 (Formhals) (Ballo) 1002; action on slags (Hamilton) 777.
Fluosilicic acid in analysis of Na (Mathers) 1730.
Flux for Al (Gelly) P 594, 1171; phosphate rock as furnace (Barr) 1023; for welding Fe, steel (Hout) P 1028; for welding and soldering Al (Thaulow) P 1742, 2220; fluxing compn. (J. Abt.) P 1743; Der Einfluss der bassichen *Flussmittel* auf die Haarissigkeit und den Schmelzpunk[illegible] von borsäurefreien Bleigläsuren (Selch, Book) 2974.
Fly sting, anaphylaxis to (Weber) 1638.
Foam, removing fermentation, in air yeast manuf. (Wulf) 506.
Foaming of second fillmass (Weiland) 392.
Fodder. See *Feeding stuffs*.
Fog in glass-clear phot. films (Lüppo-Cramer) 2038.
Foils, color- or *bronze-* (Genthiner Cartonpapierfab.) P 1537; *metal* or color (Genthiner Cartonpapierfab. *Ges.*) P 2700.
Foligan "Henning," 954.
Folin-Farmer method for N (Bock) 813 (*Folin*) 1926.
Food, Nahrwerttafel (König, book) 96; Lehrbuch der Chemie, Bakteriologie und Technologie der Nahrungs und Genussmittel (Kossowicz, book) 110; chemistry in 1913 (Rühle) 225 (Kuttenkeuler) (Rühle) 826; and Sanitation (Forster, Weigley, book) 338; Products (Sherman, book) 338; Inds. (Vulté, Vanderbilt, book) 338; Study of (Wardall, book) 338; Ni ware in prep. of (Georghiu) 487; from Sanitary Standpoint (Norton, book) 497; yeast as (Neodman, [illegible]) 672; Sn in canned (Rosse) 940; *Das* [illegible] *gewerbe* (Buchka, ed. by, book) [illegible]bensmittel-[illegible]081; Prin-[illegible]ook) 1205; [illegible] général de confiserie mode[illegible]e desserts, [illegible], chocolats (Duval, book) [illegible]05; toxic [illegible] in (Higgins) 1492; wood [illegible] (Haber-[illegible]1916; wood and straw as ([illegible]kmann) [illegible] action of (Lusk) 16[illegible]; nutri-[illegible] *purified* (McCollum) 16[illegible]; hardened fats in, ind. (Thoms) 1642; utilization by body of plant protein (Boruttau) 1800; cholesterol of, and excretion through the bile (D'Amato) 1800; metabolism of typhoid patients with and without (Coleman) 1801; Chem. of, and Nutrition (Sherman, book) 1812; love gifts on German, market (Juckenack) 1812; tapping and the storage of plant, in *Hevea brasiliensis* (Campbell) 1858; gas exchange and, consumption of heart (Rohde) 1932; training of, chemists (Juckenack) 1945; effect of mineral in water on canned (Huenink) 1949; Nahrungs-u. Genussmitteln (book) 1951; Nahrungsmittelchemie in Vortragen (Kerp, book) 1951; sugar beets for (Herzfeld) 1951; Nahrungsmittelchemie mit besonderer Berücksicht. der modernen physikalisch-chemischen Lehren (Paul, book) 1952; nutrition and metabolism of infant on art. (Hellensen) 2663; Al in, industries (Trillat) 2687; intoxication of infants by (Howland) 3278; analysis and compn. of some proprietary, for infants (Baker) 3104; physiol. importance of vitamines (Funk) 3278; blood as (Hofmeister) 3307; Trattoto di chimica applicata alla bromatologa e alla igiene (Teixeira, book) 3309. *Patents:* (Rigler) 111; treating, with atomized liquids (Samuelson) 112; (Friedenthal) 339; (Kitchen) 673; from fish and cereals (Lamb) 673; from cereals and milk (Kitchen) 829; from casein (Nyegaard & Co.) 829; cooling (Bull) 943; sol. product contg. Fe for addition to (Marsh) 1081; (Forscher) 1082; prepg. and pasteurizing (Deming) 1206; frozen (Toca) 1355; seasoning for (Eichloff) 1356; lard-like product (Burchenal) 1516; sol., from meat or fish (Bohon) 1654; (Krause) 1813; from kola (Zimmermann) 1813; from cottonseed (Falls) 1952; sterilizing and canning (Fenn) 1952; (Mariner) 1952; from malt ext. and Ca-casein (Hoffman) 2274; puffed cereal (Kellogg) 2407; electrolytic purification (Goucher) 2408; lining cans (Hodgson) 2556; product from potatoes (Haussermann) 2677; contg. lecithin (Martin) 2783; from seeds (Vartanian) 2784; edible fatty product (Ellis) 2821; (Jackson) 3108; solid easily crumbled (Rosell) 3108; jelly-like (Lehritter) P 3310; mixt. of honey and peanuts (Root) P 3310; (Boberg) P 3310; bags for enclosing, for cold storage (Kilner) P 3359; see also *Coloring matter; Feeding stuffs; Diet; Nutrition.*
Food, analysis, tartaric acid in (Häussler) 338; SO_2 in (Molstad) 487; dextrins and sugars in (Muttelet) 488; (Purvis, Hodgson, book) 497; estn. of H_3PO_4 in (Chapin) 920; crude fiber estn. (Fanto) 1950; detg. H_3BO_3 (Camus) 2269; detection of gelatinizing agents, etc. (Congdon) 2405; BzOH in animal (Baumann) 2673; Analysis of Dyestuffs and their Identification in Foodstuffs (Green, book) 2986; detection of coal-tar dyes (Possetto) 3304; see also *Butter, analysis; Fats, analysis;*

Feeding stuffs, analysis; Milk, analysis; Sugar, analysis, etc.

Food, control, Food Inspector's Handbook (Vacher, book) 493; use of harmful colors in (Sudendorf) 1395; Inspectors' Exams. (Billing, Walker, book) 1516; Ger. food law (Beythien) 2110; coloring matter in 2948.

Food, preservation of albuminous materials—liquid foods (Ges. für Sterilisation) P 339, 340; (Folin, book) 338; (Bocandé) P 673, 2556; in closed receptacles (Elliott) P 673; (Ottesen) P 1082; chemist and (Bentley) 1350; (Goslar) P 1643; fish (Qvale) P 2409; (Milburn) P 2678; see also the individual foods.

Foot and mouth disease, vaccine for (Otto) P 1226; and compn. of milk and butter (Bordas) 1353; (Yocum) 1702.

Footeite, identity with connellite (Ford) 1888.

Forests, action of foliage and needle, on soil and plants (Koch) 1816.

Forging tools, etc. (Weathers) P 166; drop (Stubbs) 2218.

Formaldehyde, treating gelatin capsules with, soln. (DeLanney) 123; sterilization (Hauswirth) 230; action of acids on $Na_2S_2O_3$ in presence of (Vanino) 275; Plöchl's reaction (Knudsen) 300; action of HCl and, on isonitroso-α-hydrindone, etc. (Steinkopf) 314; disinfection (Mayer) 344 (Dreyfus) 680 (Kropf) 1359 (Lautenschläger, G. m. b. H.) P 2557; prepg. (Gruszkiewicz) P 355 (Holzverkohlungs. Ind. A.-G.) P 1370; preservation of milk samples with (Ketel) 491; catalyst for making (Snelling) P 516; MeOH and disinfection with (Croner) 924; in milk (Graaf) 942; estn. of, tablets (Stuewe) 952; detg., in presence of Fe (Lockemann) 1159; reactions (Salkowski) 1187; detg., in aq. solns. (Lockemann) 1288; effect of added substances in prep. of colloidal Au solns. by, method (Heige) 1567; detection of small amts. of sugar by (Salkowski) 1627; sugar-, compds. (Bauer) P 1829; compd. from urea and H_2O_2 (Girsewald) P 1830; combinations of amino acids with (Azzi) 1943; process for estg. NH_3 1990; condensation products of 2,3-hydroxynaphthoic acid arylamides (Griesheim-Elek.) P 1997; salts of (Franzen) 2063; generating gaseous (Kingzett) P 2119; combating stinking smut in winter wheat by (Müller) 2122; tanning with 2161; soln. (Fuller) P 2291; transformation of antipyrine into diantipyrylmethane by (Astre) 2290; gas (Ranft) P 2292; titrating monosubstituted NH_2 group of NH_3 acids with (Clementi) 2394; basic Al salts of, -H_2SO_3 (Bleckwenn) P 2795; titration for diketopiperazines (Glagolev) 2918; transformation into MeOH (Neuberg) 58; see also *Phenol condensation products.*

Formaldehyde compounds. See *Phenol condensation products.*

Formalin. See *Formaldehyde.*

Formamide, f. p. diagrams of, with water and aliphatic acids (English) 2476; action on nitrocamphor (Lowry) 2764.

Formamidinethiolacetic acid and -HCl (Ray) 63.

Formamine, pharmacy and chemistry (Puckner) 2965.

Formaminoacetal (Gabriel) 629.

Formates, decomp. by *B. coli communis* (Grey) 329.

Formic acid, kinetics of formation (Bredig) 294; recovering esters from manuf. of artificial silk (Duclaux) P 861; viscosities of binary mixts. of, with H_2O and AcOH (Davis) 1568; (Haakh) P 1833; activation of chlorates by (Hofmann) 2169; prep. of (Keimatsu) 2232; free energy of formation of (Branch) 2832; utilization of, produced by oxidation of linseed oil (Fritz) 2988; basic Cu salts (Fowles) 3231; see also the various salts and esters.

Formic acid, analysis, in catchup (Peters) 338; seps. from AcOH (Heuser) 1444; in presence of AcOH (Lauffmann) 2632.

Formocholine butyl ether and salts (Ewins) 296.

Formocholine ethyl ether and salts (Ewins) 296.

Formocholine ethyl iodide and salts (Ewins) 296.

Formocholine methyl ether (Ewins) 295.

Formocholine propyl ether and salts (Ewins) 296.

Formol. See *Formaldehyde.*

Formularies, Book of Pharmacopoeias and Unofficial (Lucas, Stevens, book) 1225.

Formula(s), mol. (Turner) 400; for turbid media (Boutaric) 406; interpolation, for resistance thermometry at low temps. (Zernike) 407; connecting pressure and temp. of satd. steam (Godbeer) 1422; simplified, for cyclic compounds (Zappi) 2242.

Formylbromohydrin, optically active (Abderhalden) 311.

Formylcholine and salts (Ewins) 295.

Formyldesoxybenzoins (Scheiber) 301.

Formyldihydrocarvylamine (Harries) 2879.

Formyldihydroterpenylamine (?) (Harries) 2879.

Formylglyoxylic acid and diphenylhydrazone (Ciusa) 453.

Formylphenylacetic acid, isomeric forms of Et ester of (Michael) 55.

Formylpyruvic acid, Na salt of diphenylhydrazone (Ciusa) 453.

Fornet's typhus vaccine 953.

Forsterite system; anorthite–silica– (Andersen) 1446.

Fosse reagent in detn. of urea (Hugounenq) 1628.

Founding modern Fe (Onions) 1167; refractories for (Kelley) 47, 2635; elec. furnace in (Morrison) (Snyder) 176 (Kraus) 2189; Seattle elec. steel foundry (Churchill) 557; coke troubles in 590; use of oil burners in (Irinyi) 1111; Buffalo elec. steel foundry

Fundulus (Loeb) 2390.
Fungi, gathered in France (Ford) 105; disease of hemp (Charles) 153; *Amanita, Inocybe, Volvaria* and *Gyrophragimum* (Ford) 218; oxidation of $MnCO_3$ by (Beijerinck) 471; enzymes of mold (Kylin) 809; action of eosin on (Zeiss) 814; polysaccharides of (Dox) 814; org. substances and secretion of diastase by (Chapman) 923; action on alkaloids of opium (Frederichs) 952; degradation of woody matter by (Wehmer) 1059; effects of brown-rot, on compn. of peach (Hawkins) 1495; poisoning by (Fleissig) 2403; filamentous, tested for cellulose-destroying power (Seaks) 2661; chemistry of higher (Zellner) 3083; sterins (Ikeguchi) 473; see also *Molds; Mushrooms,* etc.
Fungicide, liver of S 348; plant poisons in agr. and ind. (Crivelli) 348; (Keep) P 503; N bases from tars and tar oils (Chem. Fab. Nördlinger) P 503, 1087; (Lang) P 1087; (Schmidt) P 1526; for preserving wood (Schmidt) P 1541; analyses and tests (Ince) 1819; Cu-lime powder (Pleines) P 2282; expts. (Darnell-Smith) 2419.
Funnel (Friedrichs) 257.
Fur, dyes for (Erlenbach) P 2315; glaze (Kosofsky) P 2699; protecting, from moths (Anilin-Fab.) P 2802; mordanting (Casella) P 3367.
Furane, desoxins as derivs. of (Kotyukov) 3050.
Furane-2,5-diacrylic acid and Me and Et esters (Cooper) 204.
Furane-2,5-dialdehyde, condensation with malonic ester and malonic acid (Cooper) 204.
Furane-2,5-dimethylenemalonic acid and derivs. (Cooper) 204.
Furane-2,5-dipropionic acid (Cooper) 204.
Furane-2-propionic-5-acrylic acid (Cooper) 204.
Furfural from waste gases in sulfite pulp mills (Bergström) 149; formation in steaming wood (Heuser) 859; compd. with *o*-aldehydophenylglycine (Gluud) 1615.
Furnace, wood-burning assay (Tays) 3; Pb-smelting (Monometer Mfg. Co.) 46; calcn. of, charges (Chauvenet) 48; (Bumgardner) 2635; reheating (Schreiber) 48; Iler crucible. 191 (Iler) 431; reverberatory 191 (Pyne) 1736; coal-dust reverberatory firing (Mathewson) 191 (Anon.) (Bender) 585; double chamber bullion (Harvey) 192; influence of slags and vapors on muffles in Zn (Proske) 429; charge calcns. (Osann) 430; open hearth, fired with tar oil (Ring) 430; Siegerland "spiegel" (Thaler) 430; Fink (Pulsifer) 776; excess in boiler, practice (Nisbert) 961; metallurgical and special (Monnett) 1163; gas, and heat treatment of metals (Lord) 1385; for measurement of small dissociation pressures (Sosman) 1557; for melting metals in portable crucibles (Best) 1599; thermo-tech. calcns. for gas chamber for burning clay ware (Litinsky) 1678; regenerative (Berthelot) 1685; gas-fired industrial 1705; for roasting pyrites (Barth) 1706; heating open hearth (Greiner) 1736. areagrams of open hearth flues (Mitchell) 1737; fumeless ore 1891; efficiency (Weitlaner) 2054 (Dunn) 2583 (Peebles, book) 2977; powdered coal as fuel for metallurgical 2212; oil-fired metallurgical (Dunn 2212 (Anon.) 2503; curves (Weitlaner) 2304. Pt baskets for combustion (Grant) 2611 plug for combustion (Cochran) 2611; open hearth *vs.* elec., in manuf. of com. steels (Cornell) 2867; open hearth, heating (Krueger) 3198; continuous rotary heat-treating (Paul) 3211; internal temp. of S (Pagliani) 3331 *Patents:* Tubes or chambers (Pictet) 4; heating metallurgical (Hunt) 49 (Bleininger) 3218. for roasting ores (Wedge) 50, 590 (Heskewood) 288 (Bracq) 592 (Nichols Copper Co.) 782 (Simmonds) 1171 (Sarrasin) 1297 (Bousse) 1300 (Klepinger) 1742 (Margetts) 2375; crucible-, for desilvering Pb, etc (Davison) 51; heating melting or smelting (Stoughton) 51; for melting metals (Hall) 51 (Best) 195; regenerative, for smelting (Moore) 51; gas-fired reversible regenerative (Reynolds) 52; for melting and alloying metals *in vacuo* (Simpson) 52; annealing (Kugel) 52 (Blankertz) 1171 (Gibbons Bros.) 1863 (Ingraham) 2504 (Brayshaw) 2760; melting-pot (Coppée) 52 (Hall) 594; heating open hearth (Rehmann) 53; lime and cement burning (Anker) 141; rotating tube (Port Cementwerk, etc.) 141; for making pigments (Holley) 157; for heating tools, etc. (Weathers) 166; for melting and refining Cu (Rockey) 195; metallurgical (Wedge) 195 (Hemmer) 590 (Houston) 592 (Paper) 1171 (Wedge) 1296, 1599 (Pape) 2219 (Niewerth) 2504 (Carson) 2637; for recovering metal oxides from flue dust (Downs) 259; crucible (Mellen) 287 (Goldberger) 591 (Iler) 1027 (Brierly) 1456 (Hallgren) 1600; safety-valve for

(Beling) 288; gas-fired crucible or melting-pot (King) 288; melting (Vergnani) 288 (Buess) 783 (Ver. Schmirgel, etc.) 1745 (Hatscher) 1863; for heating ingots (George) 288; distg., for Zn (Hantelmann) 292; kindling device for ore-roasting (Soc. min. & met., etc.) 292; sulfate (Emrich) 358; rakes or scrapers for salt-cake (Farbw.) 358; (Siegwart) 398; heating (Hillebrand) 398 (Poetter) 594 (Eickworth & Sturm) 1243 (Armbruster) 2146; for heating metals (Cooper) 591 (Tilley) 1027 (Schiele) 1028 (Moore) (Beach) 1742; basic-lined (Addicks) 592; gas heating (Johnson) 592; linings of metallurgical (Schwarz) (Schlossberg) 592; for recovering readily oxidizable metals (Zavelberg) 594, 1300; regenerative open-hearth (Freygang) 594 (Rehmann) 1172; for heating metal objects (Allgaier) 596; tilting (Lambot) 596, 1601; muffle-, for enameling (Zahn) 701; for prepg. fuel briquets (Unger) 708; rotary (Meyer) 733; for heating metal blanks (Swindell) 781; for Zn ores (Lanyon) 781; cement (Polysius) 855; chamber ring (Meiser) 907; hearth and muffle (Gebr. Pierburg) 907, 1172, 1707; for burning S for disinfecting (Freiherr v. Walther, etc.) 945; for heating metal tires (Lincoln) 1027; oil-heated, for heating metals (Lunger) P 1027; regenerator for metallurgical (Slick) 1027 (Orth) 1028 (Danforth) 1742; plate-heating (Diether) 1028; for detinning Pb tubes (Lehmann) 1028; nozzle for hot gas canals of open-hearth (Knox Steel Co.) 1028; superposed-hearth, for roasting ores (Wedge) 1028; metallurgical regenerative (Raynolds) 1028; muffle, for obtaining Zn (Koppers) 1028, 2377 (Engels) 1455; receivers of Zn (Laue) 1028 (Meguin & Co.) 1172 (Metallw. Unterweser, A.-G.) 2505; refuse incinerating (Leask) (New Destructor Co.) 1084; chamber (Pictet) 1103 (Geipert) 2145; rotary inclined, for port. cement (Akers) 1105; canal (Meiser) 1109, 1242; const. temp. device on (Freas) 1139; for smelting Fe ores (Kendall) 1170 (Jean) 2376; roasting (Bracq) 1172; heating and igniting (Heckmann) 1242; ventil for regenerative (Poetter) 1242; surface-combustion (Johnson) 1242 (Polysius) 2449; for coking binder in coal briquets (Grätz) 1243; for gasifying slimes (Nübling) 1243; open-hearth (Kosinski) 1297 (Intern. Salt Co.) 1979 (Davis) 2218 (Maccallum) 2760; ingot-reheating (Siemens) 1298; arch for open-hearth (Orth) 1299; stirring app. of roasting (A.-G. für Zinkind., etc.) 1300; roasting muffle (Bunzlauer Werke, etc.) 1300; for recovering Sn (Gebr. Karges) 1300; tunnel (Meiser) 1387 (Dreves) 2221 (Siemens) 3216; recovering coal from, residues (Pohl) 1388; stirrer for melting (Hall) 1410; punching tuyères of smelting (Baggaley) 1455; for making charcoal (Felizat) 1559; case-hardening (Schönemann) 1599; for heating steel bars for manuf. of Sn-plate (Golding) 1600; for melting cast Fe, etc. (Ionides) 1600; utilizing waste heat from regenerative (Bacon) 1600; smelting (Gibson) 1600 (Pape) 2219 (Plantinga) 2376; slime hearth for dressing ores (Deister) 1601; control of regenerative (Küppers) 1686; preventing Fe_2O_3 deposits in regenerators (Maccallum) 1744; welding (Erhard & Söhne) 1744; heating and combustion (Busse) 1841; for purifying petroleum coke (Johnson) 1879; metal-tempering (Diehl) 1895; reverberatory (Russell) 1895; Zn-smelting (Hyde) 2218; for drying or roasting ores (Ridge) 2218; working Zn retorts (Reitzheim) 2219; regenerative (Eckardt) 2220 (Atkinson) 2585; reheating (Eickworth & Sturm Ges.) 2220 (Krupp A.-G.) 2221; tilting crucible (Ifö, Ofenbauges.) 2221 (Tooth, Com. Gas Co.) 2472; lining (Ges. zur Ausbeutung) 2222 (Dynamidon, G. m. b. H.) 2301 (Happe) 2301, 2579 (Frick) 2807; muffle (Busse) 2308; cooling, heads (Lackner) 2377; heating rotary (Stahlwerk, etc.) 2377; smoking and preheating in ring (Beyer) 2443; rotary tube (Polysius) 2443; basic lining for tube (Happe) 2443; fuel for boiler (Perkins) 2448; gas-fired (Tooth, Com. Gas Co.) 2472; for manuf. of steel (Maccallum) 2506; Zn (Specketer) 2506; (Polysius, etc.) 2579; for enameling (Hirsch) 2580; building material (Baker) 2582; plate grate (Gerber) 2586; ring (Rauls) (Wessel) 2586; for calcining granular C, etc. (Clymer) 2612; charging ore-roasting (Harris) 2637; regulating gas-combustion in (Doherty) 2706; for coking briquets (Gratz) 2977; oil-burning smelting (Moore) 3049; heat-absorbing walls of (Pease) 3125; liquid and gaseous fuel (Rusby) 3125; prevention of smoke in (Enke) 3125; retort-, for distg. HNO_3 (Fletcher) 3334; operations (Hughes) 3354; preheating air for large chamber (Koppers) 3355; see also *Charging apparatus; Glass furnace; Discharging apparatus.*

Furnace, blast, Ti ores in (Core) 46; turbo blower for (Cutler) 47; improvements in Martin (Canaris) 429; plants of Gelsenkirch mines (Zillgen) 430; Mayari ores in (McKay) 431; cleaning, gases (Wagner, book) 437 (Johnson) 776; heat balance of (Cornell) 777; charging (Johnson) 1163; handling Fe and cinder at (Johnson) 905; construction (Maccoun) 1024, 2053; 57 years of, practice (Lange) 1163; compn. of furnace gas and working conditions of (Mathesius) 1294; continuous production of Zn in (Rzehulka) 1594; use of coal in (Lange) 1736; heat of a cupola (Guerdzeavskii) 1737; smelting in a cupola (d'Asse) 1737; operation in cupola (Townsend) 1737; Cu from (Heike) 1739; reduction of Mn in (Thaler) 1740; Beiträge zur Kenntnis des Kupolofenschmelzprozesses hinsichtlich des Verhaltens des Schwefels (Vollenbruck, book) 1894; gas en-

gines (Hubert) 2053; plant auxiliaries and general arrangement (Johnson) 2503; efficiency of operation (Burman) 3046; chem. principles of (Johnson) 3197; carbonization of Fe in gases of (Byrom) 3201. *Patents:* Cooling and purifying waste gases from (Hofmann) 52; for smelting Cu, Zn, Pb, etc. (Kekich) 592; charging (Semmler) 782 (Deutsche Maschinenfab.) 1028; blast conduit for (Zillgen) 783; prepg. Fe ore for (Collard) 1027; (Nostitz) 1299; (Thomas) (Morgan) 1599; hot-blast stove for metallurgical (Neeland) 2218; air heater for (Röchlingsche, etc.) 2378; (Gutmann, A.-G., etc.) 2506; absorbing waste heat from (Semmler) 2759; (Knox) 2758; (Wright) 2760; cupola (Gautier) 291; safety device for cupola (A.-G. Waagner, etc.) 1172; cupola, for melting Fe (Rice) 1296; cupola for melting Fe in foundries (Klug) 1455; hot-blast stoves for (Brown) 1743 (Diehl) 1894; see also *Air; Blast.*

Furnace, electric, loads for hydro-elec. plants (Johnson) 22; off-peak loads and (Johnson) 22; regulator (Anon.) 26 (McLain) 1272; in foundry (Morrison) (Snyder) 176 (Kranz) 2189; Rennerfelt 556; high temp. (Malm) 754; for detn. of C and O in steel and W (Johnson) 754; smelting (Helfenstein) 754; mfg. Fe alloys in (Keeney) 754; (Lyon) 754; in mfg. steel castings (Muntz) 754; m. Cu in (Lyon) (Addicks) 755; Elektrische Oefen (Georges, book) 893; for steel-making (Robertson) 1007; for producing nitrates from air (Scott) 1274; variation with temp. of, spectra of V and Cr (King) 1577; smelting dross in (Wile) 1581; lab. (Johnson) 1877; (Krupp) 2352; Stassano (McKnight) 2486; Héroult, 2487; melting ferro alloys (Wile) 2623; for steel and wrought Fe (Dieffenbach) 2736; for reheating, heat treatment and annealing (Baily) 2736; for Au refining (Lass) 2737; open hearth *vs.*, in manuf. of com. steels (Cornell) 2867; progress in Fe and steel ind. and (Frank) 3028; vacuum (Oesterheld) 3028; elec. Fe-ore smelting in Sweden (Leffler) 3029; elec. steel costs (Snyder) 3029; heat losses from (Wills) 3029. *Patents:* For smelting, etc. (Crafts) 26, 271 (Wellman) (Hampton) 27, 2741 (Ruhoff) 269 (Wright) 2741; (Crafts) 270; (Fischer) 270; of Birkeland type (Troye) 414; (Thierry) 414; (Rennerfelt) 1279; (Podszus) 1280; for casting metals (Queneau) 563; (Marshall) 759; (Guggenheim) 760; (Elec. Smelting Co.) 907; arc, for effecting gas reactions (Wilmowsky) 1009; carbonitrides or similar products in (Peacock) 1010; for heating solids with gases (Peacock) 1010; resistance (Blatchford) 1011; cooling smelting (Magron) 1011; for CaC_2 (Horry) 1011 (Marshall) 2625; arc (Rennerfelt) 1013; closed (Helfenstein, etc.) 1013; dead-roasting Zn blende in (Quineau) 1154; (Soc. gén. des nitrures) 1154; (Snyder) 1155; for m. quartz, glass, etc. (Industriewerke Ges.) 1156; for smelting Zn (Comp. pour le traitement, etc.) 1280; regulating, for steel (Brown, Boveri & Cie) 1281; (Harden) (Krupp Akt.-Ges.) 1721; (Soc. electro-met., etc.) 2037; incandescent body for (Podszus) 2038; (Brown) 2191; (Stassano) 2191; (Bergmann-, etc.) 2192; for graphite (Brown) 1279, 2487; for m. metals (Rombacher, etc.) 2192; for recovery of volatile metals (Breslauer) 2193; mixing rotary (Churchward) 2193; (Krupp, A.-G.) 2193; (Bunet) 2352; for roasting ores (Hampton) 2352; lining (Brüstlein) 2353; (Sodium Co.) 2353; (Ubbelohde) 2489; (Krupp, A.-G.) 2489; preventing punctures in, for making N oxides (Troye) 2625; for obtaining alkali metals (Deutsche Gold, etc.) 2742; for fusing alumina (Gerbel-Strover) 2742; (Davies) 2742; for making nitrides (Coutagne) 2841; see also *Electrodes; Glass furnace; Zinc, metallurgy of; Refractory materials.*

Furniture polish (Lewis) P 358 (Waters) P 1551 (Strauss) P 2155.

Furyl isoamyl ketone and semicarbazone (Asahina) 1049.

Furyl isobutyl ketone and semicarbazone (Asahina) 1049.

Furyl methyl ketone and semicarbazone (Asahina) 1049.

Furyl phenyl ketone and derivs. (Asahina) 1049.

Furyl propyl ketone and semicarbazone (Asahina) 1049.

Fusel oil (Scheckenbach) P 120, 691; detn. (Adams) 3115.

Fuses, igniting powder for (Lilley) P 862; (Oelker) 1248; safety detonating (Sounder) 1392; elec. blasting (Bickford, Smith & Co.) P 1548; (Oelker) 1844; (Arsem) P 3176; see also *Explosives.*

Fusibility, curves of volatile systems (Baume) 546, 547; of coal ash (Fieldner) 1837, 2808.

Fusion of metals (Guggenheim) P 762; of hollow articles from quartz sand (Voelker & Co.) P 1104; metastable continuation of, line (Smits) 1423; heat effect of Cr_2O_3 and Al_2O_3 in, with Na_2O_2 (Mixter) 1437; theory of (Ratnowsky) 1870; Fusion du platine et dissociation (Sainte-Claire-Deville, *et al.*, book) 1874 (Le Chatelier, book) 2836; modification of tartaric acid during (Bruhat) 2056; change in thermal cond. of metals on (Porter) 2345; relation between diagrams of, and viscosity (Kurnakov) 2478; curves (Bridgman) 2479; of alumina (Gerbel-Strover) P 2742; disintegration of materials by, with Na_2O_2 (Noaillon) 2745; mining S by, process (Frasch) P 2800.

Fustic, osage orange as substitute (Kressmann) 2723.

Gadolinium, morphotropic relations of Et sulfates of, and other rare elements (Jaeger) 990; spectrum (Paulson) 2030.

enamel for (Baezner) 3343; white (Macbeth) 3344; attaching rubber to (Moench) 3379; see also *Polishing composition.*

Glass blowing app. (Chamberlin) 701 (Schiller) 852 (Vernay) 1104; blowing pipe (Bornkessel) 852; automatic machine (Treuhand Ver. A.-G.) P 1984 (Mainzer) P 1984 (Severin) P 2579 (Vertriebsges., etc.) P 2807 (Fairmount Works) (Millville Co.) P 137.

Glass-drawing. *Patents:* App. (Maynard) (Healy) (Pilkington) 136 (Campbell) 519, 2300 (Colburn) 519 (Clause) (Thornburg) 701 (Pilkington) 1234 (Guelff) 1379 (Hitner) (Moore) 1679 (Slingluff) 1984 (Paquet) 2300 (Unger) 2444; (Frink) (Wadsworth) 238; (Pease) (Maynard) 239; (Dixon) 852; ring for (Quertinmont) 1103; (Stupakoff) 1539; (Bishop) 1984.

Glass furnace, introducing batch (Anon.) 700 (Ka. L.) 2135; for hollow and pressed glass 2701; continuous melting of batch in pot (Bork) 2973. *Patents:* For refining and settling (Hammitt) 136; gas generator for (Deselle) 137; for annealing glass (Nolan) 701; (Thornburg) (Henshaw) 852; (Quertinmont) 1103; (Paquet) 1234; (Miller) 1539; (Paquet) 1540; (Howard) 1679; (Ferngren) 2300; (Gregory) (Mathews) 2806; for painted glass (Padelt) 2443.

Glass pots, manuf. 852; (Wagner) P 2579; prepd. in glass factory 2973.

Glauber's salt. See *Sodium sulfate.*

Glaucidine (Cadamer) 300.

Glazes, enamel (Eyer) P 136; influence of whiteware-, -compn. on development of under, -colors (Jacobs) 2135; specification for salt-glazed ware pipes 700; calcn. of (Hermann) 957; coeff. of expansion of (Rieke) 1676; measuring, of papers (Ingersoll) 1690; majolica (B.) 1982; mosaic (Huth) 2135; for sheet-iron, glass, etc. (Mygatt) P 3343.

Glazing corks (Debove) P 1832; tiles (Baarmann) P 2443; brick, terra-cotta, etc. (Dennison) P 3344.

Gliadin, products of hydrolysis of (Osborne) 3073; proteoses from (Underhill) 3252.

Gliding in $Li_2SO_4.H_2O$ (Johnsen) 2175.

Globules, Liquid Drops and (Darling, book) 886; expts. with liquid (Darling) 2022.

Globulin, blood enzymes in, fractions of serum (Satta) 1639; perca (Folin) 1944; (Aynaud) 1803; detn. in blood serum (Robertson) 2913 (Tranter) 3284; detn. by the nephelometer (Marshall) 2914.

Glomerella, alkalinity in, cultures (Reed) 1929.

Gloriosa superba, constituents of (Clewer) 2884.

Gloss, compn. for removing, from worn garments (Wolfenden) P 1673.

Glover tower. See *Sulfuric acid, manufacture.*

Glow discharge, light emission of metal vapors in (Janicki) 3150.

Glucemia, depancreatization and (Kleiner) 1933; blood transfusion and hyper- (Carlson) 1939; pregnancy and hyper-, pancreatic diabetes (Carlson) 2665; salt and diuretin hyper- (Hirsch) 2941; influence of Na_2CO_3 on hyper-, of depancreatized dogs (Kramer) 3091; peptone hypo- (McGuigan) 3100.

Glucinum. See *Beryllium.*

Glucobakter (Bernard) 1188; (Sauer) 1189.

Gluco - *m* - hydroxycoumarin (Manthner) 1908.

Glucolysis, action of tonsils (Farmachidis) 97; catalytic influence of oxidative (Beysel) 1489; see also *Glucose; Sugar.*

Gluconeogenesis (Sansum) 3277.

***d*-Gluconic acid,** *d*-, esters and lactones (Hedenburg) 908; test for Ca salt (Mandel) 3081; in organism (Paderi) 3252.

Glucoprotocatechuic acid synthesis (Manthner) 1908.

Glucorone diphenylmethanedimethyldihydrazone (Zerner) 651.

Glucosaminic acid, prep. of (Pringsheim) 1918; methylation of (Pringsheim) 2544; test for *d*- (Mandel) 3081.

Glucose, exam. of (Petkow) 666; maize cultivated for (Boyer) 1406; conc. solns. (Wulkan) P 1855; com. (Rolfe) 2159; invert sugar or starch (Eastick) P 2324; see also *Dextrose; Sugar, analysis.*

Glucose desoxins (Kotyukov) 3050.

α-Glucosidase, specificity (Aubry) 91; glucosidification of glycerol by (Bourquelot) 2639; influence of NaOH on (Bourquelot) 2896; influence of AcOH on synthesizing and hydrolyzing properties of (Bourquelot) 3070.

β-Glucosidase. See *Emulsin.*

Glucosides (Rijn, book) 89; (Yamashita) 623; condensation of (Oddo) 789; biochem. synthesis of, of propyleneglycol (Bourquelot) 1309; of the chalcones (Bargellini) 1317; biochem. synthesis of (Bourquelot) 1339; lophopetalin (Galvialo) 1368; in sunflower (Zanotti) 1483; of Papilionaceae and Scrophularineae (Bourquelot) 1923; of purine series (Bayer & Co.) P 2130; biochem. synthesis of *d*-, of monovalent alcs. (Bourquelot) 2639; Kombe and Gratus strophanthin (Reichard) 2792; synthesis of (Engelhart) 2871; coloring matters contd. as, in flowers of Indian plants (Perkin) 2924.

Glucosidification of glycerol (Bourquelot) 2521, 2639.

Glucosone, action of aseptic tissue on (Levene) 3073.

Glucosuria, temp. and epinephrine (Nardelli) 223; post-anesthetic (Ross) 335; epinephrine (Blum) 479; in nephritis (Luzzatto) 819; of epinephrine and of diabetes mellitus (Airila) 1203; influence of posterior lobe of hypophysis on alimentary epinephrine and diabetes (Quadri) 1500; blood transfusion and (Carlson) 1939; hypophysectomy and alimentary (Camus) 2263; influence of Na_2CO_3 on, of depancreatized dogs (Kramer) 3091, (Farges) 3267; human phlorhizin (Benedict)

3278; levulose, glycocoll and alanine in phlorhizin (Lusk) 3279; exptl. (MacLeod) 3283; pancreas ext. in (Massaglia) 3295; after injection of U nitrate (MacNider) 3302.

Glucuronic acids, conjugated (Sera) 465; chloralose in organism and relation to glucuronic conjugation (Tiffeneau) 1076.

Glue, sensitiveness of dichromated (Valenta) 31; conversion table for (Ginsberg) 253; manuf. from hides (Cambon) 535; tensile strength (Gill) 730; waterproof (Bullock) P 730; and, Testing (Rideal, book) 979; (Perkins Co.) P 979; from furrier's waste (Fischel) P 1134; substitute for (Lehmann) P 1134; light colored viscous product from sea-weed (Norsk Tangsyndikat) P 1134; recovering, from sized paper scrap (Hey) P 1246; extn. of (Barnick) 1554; drying (Grosvenor) P 1672; (Sauer) 3377.

Glutaminic acid, transformation into *l*-pyrrolidonecarboxylic acid (Foreman) 632; estn. in products of protein hydrolysis (Foreman) 636; (Melasseschlempe) P 2160.

Gluten, richness of flours in (Hitier) 226; pptn. by alkaloids (Hanzlik) 637; variations in (Marchadier) 1078; colloidal swelling of wheat (Upson) 1623.

***l*-Glutimic acid**, quant. detn. of, in sugar house products (Staněk) 3373.

Glutinous materials, extg., from marine plants (Gloess) P 518.

Glyceria (Alsberg) 2773.

Glyceric acid, transformation into AcH (Neuberg) 59; relation of opt. active glycerol derivs. to (Abderhalden) 1058.

Glyceric aldehyde, *d*- and *l*- (Wohl) 1049; *dl*- (Neuberg) 3080 (Woodyatt) 3277.

Glyceric dimethylacetals (Wohl) 1050.

Glycerides, autohydrolysis of, of oils and paints (Gardner) 866; hydrogenation (Asp-Bock) P 868; hydrogenation of, of unsatd. fatty acids (Puchs) P 2822 (Schonfeld) 2988.

Glycerinhydroxamic acid and Cu salt (Angeli) 1323.

Glycerinometer (G. S.) 3370.

Glycerol, action on bacteria (Leiffert) 93; -guaiacol soln. of salvarsan (Galvagni) 123; metabolism of certain bacilli in, broths (Kendall) 215; crude sapon., in, ind. (Wilmart 250; decomp. of fats and oils into (Wilmart) 250; colloidal solns. of S and Se in (Veimarn) 546; condensing, into diglycerol (Hibbert) P 694; action of ultraviolet radiation on (Isaac) 800; and structure of *Pisum sativum* (Lawrent) 814; increasing, in oils and fats (Swamlooze, etc.) P 975; evapn. of, waters [illegible]er) 1128; elastic products from, -gelatin [illegible]ausen) P 1136; pyrophoric deposits [illegible]olysis of $FeSO_4$, $MgCl_2$ and (Kre[illegible]2; decolorizing (McKee) P 1227; [illegible]om sized paper scrap (Hay) P [illegible]Vood) P 1257; action on glyco- 1310; condensation of acetone [illegible]vine) 1468; action on pathogenic bacteria (Seiffert) 1494; factory control in, ind. (Stadlinger) 1552; soaps 1852; synthesis of cycloglycylglycines by action of, on amino acids (Maillard) 1911; as germicide (Ruediger) 1929; action of ultraviolet rays on (Henry) 2242; influence on alc. fermentation and inversion of sugar (Rossi) 2257; gas solubility in aq. solns. of (Hammel) 2342; glucosidification of (Bourquelot) 2521, 2639; yields (Steiner) 2717; combinations of boric acid and (Scoville) 2967; hemolytic action of (Simon) 3296.

Glycerol, analysis, in tablets, etc. (Forman) 512; in soap lyes (Davidsohn) 531; in pharm. preps. (Briggs) 845; (Bradt) 846; (François) 1019; in wine (Wohack) 1821; test for small amts. of (Mandel) 3081; (Steinfels) 3371.

Glycerol derivatives, opt. active (Abderhalden) 1058.

Glycerol halohydrins (Grün) P 1096.

Glycerol α-methyl ether (Irvine) 1468.

Glycerol substitute (Feil) 512.

Glycerophosphates, detection and detn. of glycerol in detn. of P in (François) 1019.

Glycerophosphoric acid, identifying esters —Na salt (Grimbert) 1309; in lecithin (Bailly) 1745; synthesis of α- (Bailly) 2059; pharmacol. action of Na salt (Maestro) 2108; Hg salt (Prunier) 2243.

Glycidic acid, *d*- and *l*-, K salt (Abderhalden) 1058.

Glycocoll, plants in, solns. (Dachnowski) 331; anhydridization (Balbiano) 616; metallic compds. of (Bernardi) 794; action of glycerol on (Maillard) 1310; rate at which ingested, is metabolized (Csonka) 1630; effect on plants (Schreiner) 2261; salt compds. of (Pfeiffer) 2652; new Cu deriv. of (Ville) 3223; in phlorhizin glucosuria (Lusk) 3279.

Glycocyamidine, conversion into creatinine isomers (Johnson) 2901; new synthesis of compounds (Johnson) 2901.

Glycogen, hydrolysis of, by enzymes (Noris) 90; in living yeast (Kullberg) 471; liver, and diabetes (Helly) 646; of liver and muscles (Parhon) 647; simultaneous change in content of N, enzyme and, in yeast (Salkowski) 921; $CHCl_3$ poisoning and liver (Graham) 934; in phanerogams (Politis) 1346; in dogs during inanition (Michaëlesco) 2263; as intermediate product in metabolism of organisms (Waterman) 2775; influence of protein and protein decompn. products on formation in liver (Richardson) 2928; mobilization in animals lacking thyroid (Blum) 2934; mechanism of, mobilization (Blum) 2935; sugar retaining power of liver in relationship to amt. of, already present in organ (MacLeod) 3283.

α-Glycoheptonic lactone, utilization by diabetics and non-diabetics (Lenel) 660.

Glycol, $C_{18}H_{38}O_2$ (Semmler) 83; $C_{12}H_{14}C_2$ (v. Auwers) 2546; see also *Ethylene glycol*

Glycolaldehyde, reduction to glycol (Neuberg) 3058.
Glycol aryl ethers (Boyd) 198.
Glycol *p* - benzeneazophenyl ether (Boyd) 198.
Glycol chlorophenyl ethers and *p*-nitrobenzoates (Boyd) 198.
Glycol cyanophenyl ethers and *p*-nitrobenzoate (Boyd) 198.
Glycolic acid, formation of acetoacetic acid from, in liver (Loeb) 926.
Glycol 2 - methoxy - 4 - allylphenyl ether (Boyd) 198.
Glycol *o*-methoxyphenyl ether and *p*-nitrobenzoate (Boyd) 198.
Glycol methylisopropylphenyl ethers (Boyd) 198.
Glycol naphthyl ether, *α*- and *β*- (Boyd) 198.
Glycol nitrophenyl ethers (Boyd) 198.
Glycol phenyl ether, *p*-nitrobenzoate (Boyd) 198.
Glycol pseudocumyl ether (Boyd) 198.
Glycols, simple transformations in series of, and N derivs. (Neuberg) 58; conversion of dibromides into (Bainbridge) 205; disecondary (Bayer & Co.) P 848; action of H_2SO_4 on higher diprimary (Franke) 910; reduction of aldehydes to *α*- (Ciusa) 1173; anhydrides of the monoesters of *ω*,*α*-, from aldehydes (Späth) 1301; influence of some, on cond. of boric acid (Böeseken) 1766; sym. bitertiary (Bouvet) 2639; mol. transpositions in *α*- (Koopal) 2645; synthetic open-chain terpene glycol (Longinov) 3053; rearrangements in, and their nitrogenous derivs. (Neuberg) 3058.
Glycol tolyl ethers and *p*-nitrobenzoates (Boyd) 198.
Glycol, 2,4,6 - tribromophenyl ether (Boyd) 198.
Glycol 2,4,6 - trichlorophenyl ether (Boyd) 198.
Glycol *p*-xylyl ether (Boyd) 198.
Glycoproteins as antigens (Elliott) 100.
Glycosuria. See *Glucosuria*.
Glycylhistamine, physiol. effect (Vanysek) 662.
Glykojogurtin, 954.
Glyoxalase, influence of hydrazine on, activity of liver (Underhill) 1508.
Glyoxals, prep. of, and their acetals (Dakin) 201.
Glyoxylamidehydrazonecarboxylic acid, Et ester (Müller) 320.
Glyoxylatehydrazonecarboxylic acid, di-Et ester (Müller) 321.
Glyoxylic acid, carbazone of Et ester (Müller) 321.
Gneisses, cordierite (Sokol) 188; mode of formation of (Fenner) 582; from Prali (Grill) 2209; theory of (Meunier) 2863.
Goat milk. See *Milk*.
Goeldner's test, for cocaine (Ryan) 2393.
Goiter, alimentary galactosuria in (Szél) 1348; relationship to water supply (Clark) 1953.
Gold, weighing minute spheres of (Blair) 39, (Scott) 49; ultraviolet spark spectra (Eder) 408; in 1913 431; washing, beads (Black) 573 (Hall) 2631; diffusion, pptn. velocity and sedimentation equil. of particles in, hydrosol (Westgren) 737; coagulation of colloidal Au solns. by Au, Ag, or Al foil (Veimarn) 742; elec. properties of, at low temps. (Onnes) 879; production statistics (McCaskey) 1024; production and consumption in U. S. during 1913 1163; coating wire, plates, etc. with (Max) P 1297; effect of added substances in prep. of colloidal, solns. by CH_2O method (Heige) 1567; colloidal (Bastin) 1568 (Hartwagner) 2171; single cell, plating (McAloon) 1582; pharmacodynamic action (Busquet) 1940; arc spectrum (Quincke) 2029; polish (Poulton) P 2432; colloidal, test on spinal fluid in mental diseases (Swalm) 2670; plating (Kateridge) 2738; action of colloidal—cardiac effects of undissolved metal particles (Busquet) 3099; m. p. (Kaye) 3161; imitation, leaf (Olson) P 3336.
Gold, analysis in by-products contg. Pt and Ir (Jolly) 186; in cyanide soln. (Bahney) 770 (Roodhouse) 2043 (Levy) 2203; (Smoot) 1441; sepn. from other metals (Christensen) 1441; (Browning) 3041.
Gold, metallurgy, elec. chlorination (Caldwell) P 29; treatment of Zn-Au slime (White) 193; (Lyons) P 194; in 1914 284; (Baur) P 289; pptg., from cyanide solns. (Clevenger) P 590; by amalgamation (Monroe) P 590 (Thomson) 2052; saving, by washing (Anderson) P 592; from gravel by amalgamation (Hoogendorn) P 1027; refining (Rose) 1293; pptn. with Al (Hamilton) 1451; preventing fumes in smelting sulfide ores of (Baggaley) P 1455; flotation in (Blyth) 1737; quartz mining and recovery of (Aitken) 1892; concn. of, in bottoms in Cu converter (Collins) 2210; smelting methods at Magistral, Mex. (Bissell) 2211; Homestake metallurgy (Clark) 2211; by Miller's Cl process (Pearson) 2501; ore contg. As_2S_3 and Sb_2S_3 (Moore) 2502; elec. furnace for (Lass) 2737; refining cyanide ppts. (Durant) 3047; in Calif.—comparison (Palmer) 3048; (Feldtmann) P 3050; An from cyanide solns. (Towne) P 3215; see also *Cyanide process*.
Gold alloys, use of bad, in mouth (Harnack) 89; with Cd (Saldau) 779; Ni-Cu-Au-Ag (Parravano) 1024; soly. of H in (Sieverts) 3006; transformations in, with Cu (Kurnakov) 3203.
Gold compounds of cantharidine-ethylenediamine (Farbw.) P 356; (Schmitz) P 3330.
Gold cyanides in chemotherapy of tuberculosis (Schumacher) 2940.
Gold deposits of Nova Scotia (Malcolm) 281; placers on Wind and Bighorn Rivers, Wy. (Schrader) 426; -bearing gravels of Beauce Co., Quebec (Tyrrell) 1161; quartz (Slavik) 1290; in southern Nevada (Knopf) 1591.

Hands, protective coating for (Moore) P 2699.
Hardening, steel (Wuelser) P 52 (Campbell) 285 (Humphrey) 436 (Scholz) (Mathews) 778 (Hammesfahr) P 1029 (Arnold) (Hadfield) 2213 (Anon.) 2374 (book) 3213; Cu (Bittner) P 288 (White) (Kich) P 2220; Fe or steel (Sweet) P 288; Fe (Vickers, Ltd.) P 290 (Brown) P 1743; of fats (Bergius) 389 (Fahrion) 1254; oils in Europe, 389; with and without martensitization (Howe) 589; Fe and its alloys (Edwards) 590; change of vol. and form of steel in (Schulz) 1025; Heat-treatment of Steel; Tempering, Annealing (book) 1026; thin steel articles (Nickerson) P 1026 (Ericson) P 2638; concrete structures (Flesheim) P 1237; of metals (Hadfield) 1453, 2213 (Edwards) (Beilby) 2213; formation of Ni in, oils with Ni compds. (Norman) 1552; Ni borate as fat, catalyzer (Norman) 1552; projectiles (Hadfield) P 1600; thin metal articles (Thuillier) P 1894; Ueber die Volumen und Formänderungen des Stahles beim Härten (Schulz, book) 1894; wood (Comp. franc. d'injection) P 2140; steel gears (Farmer) P 2759; of oils with Ni (Siegmund) 3138; high-speed tool-steel (Edwards) 3201; metallography and, of steel (Sauveur) 3208; see also *Case-hardening; Cementation; Hydrogenation.*
Harder glands, cytology of (Kuc-Staniszewska) 650.
Hardness, testing (Shore) P 258 (Poldihütte Tiegelguss.) P 1707 (Olsen) P 1862 (Turpin) 2214 (Anon.) 3208; interstrain theory of (McCance) 285, 777; of Fe–C alloys (Levin) 433; of solid solns. (Desch) 437; of X-rays and interference in crystals (Friedrich) 545; Brinell, tests (Hess) 586 (Ringland) P 592; of systems: Ag–Zn and Ag–Al (Petrenko) 777; of Cu-Zn alloys (Meneghini) 1453, 3206; of water and teeth (Rose) 2098; test on rough cast metals (Portevin) 2374; see also *Water, analysis.*
Hashish, tests for (Beam) 2289.
Hastingsite (Quensel) 2496.
Hauerite, constitution of (Beutell) 2495; action of, on Ag and Cu (Quercigh) 3191.
Hay, granitic soil K and (Curry) 501; influence of phosphate and potash on (Dussere) 838; influence of temp. on microflora of,—lactic and butyric (Gorini) 1642; $CHCl_3$ ext. of (Fraps) 1951; feeding expts. with (Tacke) 1951; food value of potato plant as (Völtz) 3107.
Hay fever, immunization to (Gottlieb) 1937 (Oppenheimer) 2670; vaccine treatment (Iskowitz) 2776.
Health, biologic therapy and public (Krall) 104; Public, Lab. Work (Kenwood, book) 114; Die Bedeutung der Chromate für die Gesundheit der Arbeiter (Lehmann, book) 1214.
Heart, action of amanitas on frog (Ford) 105; ventricular fibrillation under $CHCl_3$ anesthesia (Levy) 107; effect of quinoline group on (Fredericq) 658; action of K and Na

Digitized by Google

iodides and of I ion on (Macht) 659; temp. and rate of, beat (Laurens) 664; method of digitalis assay (Rowe) 846; strychnine and caffeine as cardiovascular stimulants (Newburgh) 1202; respiratory exchanges of, in diabetes (Starling) 1074; cardiovascular action of choline (Patta) 1349; antagonistic action of CO_2 and epinephrine on (Patterson) 1507; sugars and action of (Mizuno) 1510; absorption and storage of digitalis substances in (Issekutz) 1511; renal function in cardiorenal and cardiac diseases (Rowntree) 1639; influence of temp. and concn. on reaction to ouabain (Sollman) 1806; effect of synthetic camphor on (Lutz) 1807; influence of tartrates, citrates and oxalates on isolated (Salant) 1807; gas exchange of (Rohde) 1932; perfused,—effects of NaCl (Burridge) 1933; action of Ca salts and alkalies on perfused (Burridge) 1934; effects of digitalis (Hirschfelder) 1940; action of, drugs on coronary vessels (Sakai) 2110; effect of mechanical conditions on gaseous metabolism and efficiency of mammalian (Evans) 2776; isolated, of frog under action of nicotine and heat (Zanda) 2777; action of K on vagus tonus (Hering) 2935; stimulating action of K on (Hering) 2935; effect of epinephrine on, rate (Meek) 2941; action of colloidal Au—cardiac effects of undissolved metal particles (Busquet) 3099; effect of diff. epinephrine compds. on arterial pressure of dog which had received atropine (Tiffeneau) 3099; refractometry of nerve fluid in chronic affection of (Babes) 3256; treatment of chronic, diseases with "Theacylon" (Hoffmann) 3326.

Hearth for roasting furnace (Bracq) P 1172.

Heat in slag (Johnson) 47; coagulation of albumins by (Chick) 90; generation by fermentation (Mohr) 117; Mechanics and (Anderson, book) 265; regulation in curarized animals (Freund) 478; effects on ethereal oils (Irk) 509; contraction of smooth muscle and, production (Snyder) 633; myothermic expts. in salt solns. in muscular contraction (Weizsacker) 633; behavior of soil bacteria when heated in absence of air (Kühl) 640; produced by plants (Molisch) 641; production in anaphylaxis (Hirsch) 653; balance in blast furnace (Cornell) 777; economy in prep. of alloys (Guertler) 778; inactivation of peroxidase in milk by (Zilva) 813; and transforming and binding power of blood (Terry) 935; economy in sugar factory (Claassen) 976; convection of, from small cylinders in stream of fluid (King) 1004; utilization of exhaust-gas, from internal-combustion engines 1106; destruction of pancreatic enzymes by (Lombroso) 1068; relation to elec. cond. (A. B.) 1141; phenomena in formation of binary mixts. (Kremann) 1143; production in diseased plants (Pavarino) 1190; -interchanging system in smoke stacks (Thiel) P 1242; economy in production of Fe (Otto) 1294; effects on mechanical properties of metals (Huntington) 1295; effect of Cr and Al sesquioxides in fusions with Na peroxide (Mixter) 1437; heat-compensated cond. salinometer (Coplans) 1341; numerical testing of thermal relationships (Herz) 1574; decompn. of NaH_2 salts by (Turrentine) 1586; utilizing waste, from regenerative furnaces (Bacon) P 1600; utilizing, of cooling slags (Wärme-Verwertungs-G.) P 1601; evolved in germination of seeds (Darsie) 1630; decompn. of coal by (Porter) 1682; distribution in ceramic ovens (Bigot) 1835; diffusion along moving cylinder (Sommers) 1869; waste, from combustion motors (Golz) 1989; expansion of Hg and fused SiO_2 (Harlow) 2024; and expansion of solids (Valentiner) 2024; transformation of polymorphic minerals (Laschenko) 2045; radioactivity and earth's thermal history (Holmes) 2052; chemicals used in shop processes requiring (Fish) 2131; distribution in cylinder of gas engine (Gibson) 2142; effects in cooling of metals (Laschenko) 2169; -producing compn. for clearing sewer pipes (McNabb) P 2279; exchange app. (Wärme-Ver., etc.) (Pöppl) P 2332; and activity of reductase (Harris) 2390; effect of temp. on, evolved in reactions (Mellor) 2478; thermionic currents (Smith) 2483 (Richardson) 3166; history of lab., supply (Kistner) 2609; electrons and (Richardson) 2620; absorbing waste, from blast furnaces, etc. (Semmler) P 2759; isolated heart of frog under action of (Zanda) 2777; interchange system for liquefying air (Place) P 2799; waste, recovery in gas plants (Schmied) 2810; formation in infectious fevers (Mansfeld) 2934; chem., regulation (Mansfeld) 2935; evolved in adsorption of different liquids (Gurvich) 3003; losses from elec. steel furnace (Wills) 3029; measuring, by small e. m. fs. (Coburn) 3034; thermal efficiency of gas engine (Asakava) 3124; decomp. of H_2O_2 by (Lemoine) 401; (Kaye) 3160; spontaneous generation of, in recently hardened steel (Brush) 3209; coke-oven thermal balances (Krueger) 3351; thermoregeneration of diastase of yeast (Bertrand) 3258; exchanging device for high pressure steam (Junkers) P 3355; see also *Heat of combination*, etc.

Heat conductivity. See *Conductivity, thermal.*

Heater, const. temp. (Pearce) 539; calcn. of blast (Osann) 585; pre-, for tar distn. (Kuroda) 2305; performance tests of sugar-house (Kerr) 2721; C as heating element (Piper) 3174. *Patents:* for H_2O (Daley) 3 (Anon.) 1262; for asphalt (Guelich) 147; for liquids (McClelland) 258; for slimy liquids (Wolters) 398; elec. (Wilbur) 563 (Westinghouse Elec. Co.) 1139 (Brockdorff) 1722 (Altenkirch) 2010 (Pfretzschner & Co.) 2489; inserting wire in quartz (Katz) 761; furnace (Eickworth & Sturm) 1243; super- for

vapors and gases (Züblin) 2010; for grain (Samuelson) 2117; for peat (Intern. Nitrogen Co.) (Rigby) 2308; for hydrocarbon generators (Van Steenbergh) 2310; for air (Buess) 2332; (Timm) 2332; air, for blast furnaces (Röchlingsche, etc.) 2378; for earthy substances (Popkess) 2703.

Heather tea (Schneider) 1945.

Heating, rate of reaction between Cl and H on (Melander) 31; re-, furnaces (Schreiber) 48; open hearth furnaces (Greiner) 1736 (Krueger) 3198; vacuum pump for, systems 166; CO and NO in, flames (Terres) 242; by gas (Bunte) 243; time of, and quenching (Portevin) 588; and Ventilation Plants (Hubbard, book) 945; Theory and Practice of (Barker, book) 1083; sulfite digesters (Sembritzki) 1114; and Ventilating (Carpenter, book) 1213; Designing, Systems (Fuller, book) 1814; Feuerung und Feuerungsanlagen (Haase, book) 1991; with gas coke and metallurgical coke (Otto) 2144; method in investigating binary eutectic mixts. (Bezborod'ko) 2179; gas coke in central, plants (Ries) 2306; change in elasticity of mild steel wire with (Dodge) 2370; of cottonseed (Barrow) 2604; elec., in metallurgical ind. (Foerster) 2736; problem after the war (Uhlmann)) 3124; brittleness of rolled wrought Fe as consequence of (Baumann) 3209; coke-ovens from the top (Simmersbach) 3351. *Patents:* metal rod electrically (Walling) 28; metallurgical furnaces or cement kilns (Hunt) 49; melting or smelting furnaces (Stoughton) 51; open hearth furnaces (Rehmann) 53; tools, etc., for forging (Weathers) 166; sand, stone, etc. (Coleman) 704, 1988; by "surface combustion" (Kirke) 709; milk (Stier) 944; coal gas retort chambers (Rusby) 1840; coke ovens, gas-retorts (Woodall) 1992; rotary furnaces (Stahlwerk, etc.) 2377; pre-, in ring furnaces (Beyer) 2443; gas-fired coke ovens (Doherty) 2706; oil (Markl) 2814; metals (Permutit) 3218; elements for utilizing waste heat (Kleyer) 3355.

Heat of combination of CO with hemoglobin (Raymond) 818; of water with certain oxides (Mixter) 2478.

Heat of combustion of cane sugar, BzOH and naphthalene (Dickinson) 9; of aromatic nitro derivs. (Swarts) 445; detg. with combustion calorimeter—of aromatic hydrocarbons and their hydrogenation products (Roth) 995, 996; of phototropic substances (Padoa) 1144; of aromatic hydrocarbons and $(CH_2)_6$ (Richards) 1422; of BzOH (Svyentoslavskii) 2180; of muscle protein (Krummacher) 3284.

Heat of dilution, Von Babo's law and Kirchhoff's equation for latent (Porter) 2180; of concd. soln. (Tucker) 2831.

Heat of formation of acrolein and metacrolein (Voisenet) 1575; of V pentoxide and V chlorides (Ruff) 1867; of oxides (Mixter) 2478; of NH_3 (Haber) 2619; of compds. formed in production of gas from C (Hoffmann) 2976.

Heat of fusion, fluidity and (Guzman Carrancio) 740, 3148; of ice (Dickinson) 2344; and periodic system (Guzman Carrancio) 3148.

Heat of hydration of textile fibers (Testoni) 2595.

Heat of neutralization of NH_3OH and NMe_4OH (Ellingson) 1268.

Heat of polymerization of some oxides (Mixter) 2478.

Heat of reaction (Steinwehr) 3149.

Heat of solution (Leval't-Ezerskii) 1711; and tension of satd. vapor (Leval't-Ezerskii) 3003; in mixed solvents (Tanatar) 3018.

Heat of swelling of colloids (Rosenbohm) 742.

Heat of transformation, of $Cd_\alpha \rightleftarrows Cd_\gamma$ (Cohen) 2019.

Heat of vaporization, calcn. of (Partington) 11; (Partington) 548; van der Waals and (Sutton) 1575; in liquids (Garver) 2179.

Heat test (Dupre) 2980.

Heat treatment, plant 47; linear structure of steel and (Oberhoffer) 433; of low-C steel (Preuss) 434 (Lund) 2370; of pearlitic Ni steel (Meyer) 434; of wrought Mn steel (Potter) P 438; of admiralty gun metal (Primrose) 587; of Steel (book) 1026, 3213; (Millholland) 1893; of metals (Tilley) P 1027 (Lord) 1385; development of (Abbott) 1169; of modern steels (Abbott) 1294; of drill steel (Bergh) 1294; of steel wire (Tinsley) 1454; of rolled steel sheets (White) P 2220; of Cu and brass (Hayward) 2372; of case-hardening C steel 3201; of gun steels 3206; of Ni-V steel 3206; measuring temps. for (Coburn) 3208; continuous rotary furnace for (Paull) 3211; see also *Tempering.*

Hediosite, utilization by diabetics and nondiabetics (Lenel) 660.

Hehner number, detn. (Pollak) 531.

Helenin (Lamson) 1202.

Helianthines, isomerism of (Hantzsch) 1177.

Helichrysum saxatile, essence of (Francesconi) 1094.

Heliotropism (Marcolongo) 1347; (Loeb) 1923, 2391.

Helium, production by elec. discharge (Collie) 20; liquid (Onnes) 545, 735, 879; Pt resistance and the He thermometers (Onnes) 747; spectrum of (Evans) 1002 (Nicholson) 1003, 1269, 2482 (Merton) (Bohr) 1269 (Fowler) 1426; in titanite (Magli) 1005; production by radioactive substances (Debierne) 1428; liquid, (M) sp. heat and thermal cond. of Hg at low temps. (Onnes) 1580; H–He system (Harkins) 2335; Stark-LoSurdo phenomenon in (Brunetti) 2835; see also *α-Rays.*

Heller ring test (Michel) 2392.

Helminthiasis, Abderhalden dialysis method in (Manvilov) 334.

Hemagglutinins as indicators in syphilis (Pfeiler) 1804.
Hematein, test for occult blood (Couturier) 1187.
Hematin, detg., in blood (Azadian) 329; affinities of (Menzies) 3258.
Hematite, formation of cryst., during burning of bricks (Hughes) 1587.
Hematology, Bedside (Ward, book) 335; see also *Blood*, etc.
Hematoporphyrin (Küster) 2882.
Hematoporphyrinuria (Pförtner) 108.
Hematoxin, formation by cholera vibrios (Löwy) 1494.
Hematoxylin, soln. (Szüts) 639; as indicator (H. P.) 2566.
Hemicellulose, action of hemicellutase on (Davis) 690.
Hemicellutase (Davis) 690; (Heintz) (Windisch) (Lintner) 2964.
Hemimellitic acid, derivs. (Curtius) 1609.
Hemin, hemopyrrole, scisson of (Hahn) 463; test for blood (Beam) 1793; crystal test (Nippe) 1927; method of union of water taken up by, crystals (Katz) 3256.
Hemlock, cicutoxin, poison of water hemlock (Jacobson) 1330; as pulp wood 1390.
Hemochromatosis, Fe in organs in (Muir) 1198.
Hemocyanin, *Limulus* (Alsberg) 487.
Hemoglobin, isoelec. point of CO-, and of reduced (Michaelis) 466; bile pigments and (Barratt) 479; infra-red absorption bands of (Hartridge) 634; heat of combination of O with (Reymond) 818; reduction by reductase (Harris) 1489; pigment metabolism (Addis) 1630; relation to O tension of respired air (Dallwig) 1932; changes at high altitudes (Schneider) 1933; displacement of O of CO from combination with (Nicloux) 1934; detecting, in urine (Lipp) 2260; effect of work on % of, in blood (Boothby) 3283.
Hemoglobinates, metallic (Kobert) 463.
Hemoglobinuria, paroxysmal (Roberts) 3097.
Hemolysins, transmission of (Troisier) 652; as indicators in syphilis (Pfeiler) 1804; in human serum (Kolmer) 1935; natural anti-sheep, in guinea-pig blood (Cole) 3290.
Hemolysis, by hypotonic salt solns. (May) 91; action of CO_2 on (Lagrange) 102; hemolytic power of aq. exts. of suprarenal capsules (Cazzaniga) 221; by cholera and cholera-like vibrios (Greig) 934; effect of $CaCl_2$ on, occurring *in vivo* (Topley) 1194; salt-conc. and (Topley) 1502; power of serum of frog (Ronca) 1935; by capillary-active substances in cold-blooded animals (Kisch) 2110; producing hemolytic amboceptor against sheep corpuscles (Coca) 3092; viscosity and (Traube) 3258; activity of spleen in pernicious anemia (Robertson) 3288; absorption of Fe from organs after (Muir) 3289; action of glycerol (Simon) 3296.
Hemophilia, fibrinogen deficiency in (Hess) 3293.
Hemopyrroles and picrate (Piloty) 57; (Hahn) 463.
Hemorrhage by toxic agents (Hess) 334; effect on factors of coagulation (Drinker) 1934; protein metabolism, under conditions of repeated (Taylor) 2929; resistance of fasting dogs to (Howe) 3087.
Hemosiderin (Leupold) 99.
Hemostatic, emetine-HCl (Stewart) 2969.
Hemotoxicity, of normal and anti-sera (Nicolle) 2552.
Hemp, fungus disease of (Charles) 153; degummed (Burton) P 155; prepg. for spinning (Summers) P 864; fiber (Young) P 2455; steeping or retting (Feuillette) P 2818.
Heneicosoic acid and derivs. (Le Sueur) 2894.
β-Heptaacetylbenzoylcellobiose and salicyl and hippuryl compds. (Zemplén) 2252.
Heptabromoanthraquinone (Eckert) 1761.
Heptachloroanthraquinone (Eckert) 86, 1465, 1761.
Heptachlorobenzoylbenzoic acids (Eckert) 1761.
Heptachloropropane, decomp. by heat and catalyzers (Böesecken) 1765.
Heptacyclenes and derivs. (Dziewonski) 211.
Heptamethylsucrose (Haworth) 1034.
Heptane, derivs. of (Dionneau) 2057.

***n*-Hexyl alcohol** (Neuberg) 58.
Hexylisoamylcarbinol and chlorohydrin (Vanin) 3050–1.
Hides, manuf. of glue from (Cambon) 535; dressing and drying pelts (König) 979; swelling of pelts in presence of H ions (Powarnin) 979; disinfection of, infected with anthrax spores, (Tilley) 1554; of animals with foot and mouth disease (Yocum) 1702; depilating (Helfrich) 2325; absorbent power of plumped, toward vegetable tanstuffs (Kudlacek) 3143; enzymes in bating of (Wood) 3143. *Patents:* Dyeing (Anilin-Fab.) 386, 3133, 1124, 2153 (Vidal) 2152; dressing (Hansen) 731; treating (Brooks) 980; glue from furriers' waste (Fischel) 1134; dehairing (van Osselaer) 1857; degreasing (Filhol) 1258 (Müller) 2466; preserving fresh (Yocum) 2724; fireproofing and waterproofing (Kristensen) 2972; softening (Morin) 3379.
Hippuric acid in tartrate nephritis (Kingsbury) 817; detg., in blood and tissue (Kingsbury) 2259; synthesis in animal organism (Raiziss) 2261; synthesis in nephrectomized dogs (Kingsbury) 2397; interaction with thiocyanates (Johnson) 2900.
Hirudin, immunization against anticoagulating effect of (Vera) 654; toxicity of preps. (Marshall) 2671.
Histamine, physiol. action (Vanysek) 662; effect on circulation (Mautner) 3285.
Histidine and tribenzoyl compd. (Kossel) 1308; color reaction (Pauly) 2918.
Histidinebisazobenzenearsonic acid (Pauly) 2905.
Histidine-like substances in pituitary gland (Aldrich) 929.
Histone, from testicles of *Astropecten aurantiacus* (Kossel) 2947; prep. from flounder sperm (Eddy) 3071; nucleoprotein (Eddy) 3072; 2 new (Eddy) 3072.
History of corrosion (Bengough) 49; first occurrence of the name "chemistry" (Von Lippmann) 167; of direct NH_3 production process (Ohnesorge) 236; development of

Digitized by Google

Am. chem. inds. (DuBois) 236; development of chem. research in America (Remsen) 260; rise and progress of electrochem. (Hale) 266; of physico-chem. research in biology (Hamburger) 327; synthesis of dyes (Noelting) 381; hardening of fats (Bergius) 389; sensibility of Ag salts to light (Guareschi) 399; of treated wood block pavements in the U. S. (Teesdale) 520; of sugar (Wright) 532, 1130, 1699; Ag mirrors according to Liebig (Lenk) 695; development of Canadian chem. ind. (Wardleworth) 848; crystal structure and chem. constitution (Pope) 875; Ger. chem. ind. 30 yrs. ago (Roscoe) 848; of the metallurgy of Fe and steel (Hadfield) 904; of opium, its prepns. and alkaloids (Macht) 953; development of soil science (Neuss) 1084; of petroleum 1109; 4000 yrs. of papermaking (Stephenson) 1113; 57 yrs. of blast furnace practice (Lange) 1163; treated wood block pavements 1236; development of elec. science (Auerbach) 1272; elec. pptn. (Cottrell) 1272; of the thermometer (Atchison) 1409; ductless glands, internal secretions and harmonic equil. (Garrison) 1500; NaCl and its use as medicine (Berger) 1531; cupropotassic solns., Barreswil's and Fehling's solns. (Pellet) 1699; dawn of modern chem. (Stillman) 2012; aniline dyes (Douglas) 2151; bone black (Wiechmann) 2159; Lavoisier and Berzelius (Guareschi) 2169; calcining of metals (Bloch) 2334; of lab. heat supply (Kistner) 2609; of phenazone, phenacetin and acetanilide (Sharp) 2691; of salicylic compds. and of salicin (Sharp) 2691; of pharmacopeias (Buehrer) 2692; colored glass of Middle Ages (Chesneau) 2700; of org. coloring substances (Wahl) 2710; of writing ink (Martell) 2714; of therapeutics and chem. of oxypinenes (Blomén) 2792; of sugar cane (Hines) 2990; Jan van Geuns and discovery of vulcanization of rubber (Jorissen) 2996; Edison and invention of elec. incandescent lamp 3034; Geschichte der Chemie, II (Bauer, book) 3167; of antiseptics ("Chemicus") 3328; of emetine and ipecac (Prinz) 3328; of cane mills (Dod) 3375; Versuche e. Geschichte der Gerberei (Stickelberger, book) 3378.

Hittorf-Crooks space, elec. field in (Lo Surdo) 1269.

Hog cholera, sepn. of antibody fractions in, serum (Eberson) 3092.

Hoist controller (Cullinan) 24.

Holarrhena congolensis, alkaloids of (Burn) 659.

Holarrhenine (Burn) 659.

Holder for C electrodes (Planiawerke, etc.) P 1156; gas (Braine) 1683.

Holoquinoid salts (Kehrmann) 1334–5.

Holothuria, orientation of, by light (Crozier) 928.

Holothurians, rythmic pulsation of cloaca of (Crozier) 2947.

Homatropine and vagus (Zulick) 1203.

Homocholines, phys. actions of (Hun 1203.

Homogenization, milk (Schroeder) P 944; degree of, of milk (Sobbe) 1352.

Homologous series, b. pa. in (Sugden) 10; b. ps. and critical temps. of compds. of (Ferguson) 1575; rotation dispersion of (Hagenbach) 1872.

β-Homonataloin, resolution of (Léger) 2895.

Homopiperonyl alcohol (Robinson) 1602.

Homotropism (Lehmann) 779.

Homovanillin and derivs. (Harries) 1053; (Harries) 2246.

Homoveratryl alcohol (Robinson) 1602.

1 - Homoveratryl - 1 - dimethylamine - 5,6 - dimethoxyindene (Pyman) 1311.

1 - Homoveratryl - 1,5,6 - trimethoxyindene (Pyman) 1311.

Honey, exams. (Kretzschmar) 109; strained (McGill) 225; mouse-grey,—sugar layers in (Reese) 226; enzymes of (Gothe) 666; detg Cl ions in (Nottbohm) 939; properties and action of, diastase (Gothe) 1077; protein of (Langer) 1491; Fiehe reaction in mixed (Lüning) 1811; Ueber neuere Methoden der Honiguntersuchung (Fiehe, book) 1951; chem. investigation of (Kuttenkeuler) 3107; in diet for diabetics (Davidov) 3278; food mixt. of, and peanuts (Root) P 3310.

Hood, lab. fume (Coleman) P 3; stone-frame chem. (Weaver) 2470.

Hopkins-Cole reaction for protein (Breidahl) 1792.

Hops, detg. resins in (Schmidt) 688 (Wingo) 1657; testing for aroma (Schönfeld) 1090; extg. (Horst) P 1222; transformations during boiling (Jakob) (Wiegmann) 1222; aroma of (Schmidt) 1657; lupulin content; titration of resins (Schmidt) 1823; new variety (Salmon) 2284; fiber, paper and red charcoal from, vines (Reinke) 2708; examg. (Moufang) 2686; feed value of brewed (Völtz) 2952.

Hormonal, physiol. effect (Vanysek) 662.

Hormones, ductless glands, internal secretions and hormonic equil. (Garrison) 1500.

Horn (Damgaard) P 535; coloring (Beutel) 2816; working up (Pufahl) 2971.

Horse-chestnut as a feed (Hansen) 828.

Horse radish, sauce (Schwartz) P 2408.

Horticulture, use of HCN in (Sargeant) 233.

Hospital, air (Winslow) 230.

Hübl index. See *Iodine number.*

Human organism. See *Animal organism.*

Humic acids. See *Humus.*

Humidifying, app. (Desaulles) P 2999.

Humidity, action on organism (Lee) 3258.

Humin, formed by acid hydrolysis of proteins (Gortner) 2098.

"Humin" process in sugar factory (Pritzkow) 391.

Humors. See *Body fluids.*

Humus formation (Lang) 191 (Trousseff) 3112. oxidation of Fe compds. in solns. contg

Digitized by Google

humus (Maekinen) 231; colloidal properties of, acids in Japan (Tadokoro) 231; nature of humic acid (Odén) 231; influence of $(NH_4)_2CO_3$ on detn. of (MacIntire) 346; humic substances in barley husks (Weinwurm) 1088; detg., in soils (Rollov) 1216 (Smith) (Fraps) 3316; Die Bestimmung des Oxyhumushaltigen v. Eisenverbindungen in humushaltigen Lösungen (Makinen, book) 1963; action of prepns. on vegetation (Haselhoff) 1963; acids and colloids of (Fischer) 2119; chem. groups of amino acids in hydrolyzed soil and their humic acids (Potter) 2683; Ueber die Natur der Humussäure (Oden, book) 2963; from org. compds. (Beecroft) 3253.

Hunger, gastric hunger mechanism (Luckhardt) 818; cholesterol in organs and blood in (Rothschild) 2397.

Husks, stock food from (Walker) P 1813.

Hyaline casts, production of, by ions (Gates) 3289; $MgSO_4$ on production of (Gates) 3301.

Hydantoins, geometrical isomerism in (Johnson) 597; (Johnson) 909, 2528, 2900; condensation of cinnamaldehyde with (Johnson) 2654.

Hydnoresinotannol, benzoic esters of (Zellner) 3083.

Hydnum, chemistry of *H. ferrugineum* and *H. imbricatum* (Zellner) 3083.

Hydracids. See *Acids.*

Hydracrylic acid, hydrolysis of Et ester (Drushel) 615.

Hydrastine, identification in plants (Mayrhoffer) 122; detn. (David) 1826.

Hydrastinine (Bayer & Co.) P 126; derivs. (Merck) P 1226.

Hydrastis, assay (Jones) 846.

Hydrastis canadensis L., detn. of hydrastine in (David) 1826.

Hydrastopon 954.

Hydrates, detg., formed by a salt (Foote) 1016; solubility of (Gay) 1142; in soln. (Washburn, book) 1428; problem (Remy) 1569; in non-associated solvents (Szyszkowski) 2014, 2015; solubility curves of salt (Taylor) 2019; (Johnsen) 2194; expansibility tension and theory of (Gay) 2478.

Hydration of portland cement (Klein) 701; ionic, of CsCl (Washburn) 1265; of ions at infinite diln. (Smith) 1266; in soln. (Padoa) 1416; of $CaSO_4.0.5H_2O$ (Rohland) 1540; hysteresis of degree of, of cellulose (Rakovskii) 1567; (Remy) 1869; temp. and, of acids in C_6H_6 (Szyszkowski) 2015; and f. p. and b. p. in aq. solns. of salts (Sluiter) 2020; of camphoric anhydride (Wilsdon) 2174; of lime (Anker) P 2445, 2446, 2703 (Schondeling) P 2446 (Avram) P 3347; in gelatin (Fischer) 2830; non-acid and non-alk., of proteins (Fischer) 2903; of protein ion (Pauli) 2909; of paper pulp (Cyster) 3129.

Hydrazinacetic acid derivs. (Müller) 320.

Hydrazinazides of tribasic acids (Curtius) 1607.

Hydrazides of org. acids (Curtius) 1605; of org. acids—oxalic acid (Curtius) 2765.

Hydrazidioxalic acid and derivs. (Curtius) 2766.

Hydrazidioxalyl derivatives (Curtius) 2766.

Hydrazidioxamide and Ag salt (Curtius) 2765.

Hydrazihydrazides of tribasic acids (Curtius) 1607.

Hydrazimethanedicarboxylic acid di-Et ester (Müller) 320.

Hydrazimethanetricarboxylic acid tri-Et ester (Müller) 320.

Hydrazine, anhydrous, as solvent (Welsh) 1015, 1267; chem. reactions in anhydrous (Welsh) 1284; influence on utilization of dextrose and on glyoxalase activity of liver (Underhill) 1508; action of oxalyl chloride with derivs. of (Folpmers) 1785; (Schlenk) 2197; ditertiary (Wieland) 2537; aromatic (Wieland) 2540.

Hydrazine compounds with Pt (Chugaev) 274; (Gabriel) 321.

Hydrazinedicarbamides (Busch) 61.

Hydrazine diperchlorate (Turrentine) 1586.

Hydrazinedithiocarboxallylamide (Busch) 62.

Hydrazinedithiocarboxymethylamide (Busch) 61.

Hydrazine hydrate action on fats (Falciola) 866.

Hydrazine salts, reduction of chlorates (Hodgkinson) 571; detg. As by heating in HCl with, and KBr (Jannasch) 1286; decompn. by heat (Turrentine) 1586.

Hydrazine sulfate, electrochem. oxidation of (Turrentine) 1586.

Hydrazinodiacetic acid (Bailey) 1332.

Hydrazinoformomethylamides (Backer) 2383–4.

Hydrazino-oxalic acid, Et ester and its HCl (Curtius) 2766.

Hydrazobenzene, action on org. acids and anhydrides (Simonyi) 88.

Hydrazo compounds, decomp. of aromatic (Wieland) 2539.

Hydrazoic acid, salts of (Wöhler) 1115.

Hydrazones, auto-oxidation of (Busch) 805.

Hydrindenedicarboxylic acid, reduction of Et ester—chloride of (Kenner) 461; (Bougault) 614.

1 - Hydrindonedihydrocarbostyril - 2,3 - spirane and isomer (Leuchs) 3244.

2 - Hydrindylmethylamine and salts (Kenner) 462.

2 - Hydrindylmethylmalonic acid and derivs. (Kenner) 462.

β - 2 - Hydrindylpropionic acid and salts (Kenner) 462.

Hydriodic acid, reduction of arylsulfonamides by (Fischer) 1057; dielec. const. of liquid (Schlundt) 1575; photochem. reaction of (Gil) 2338.

Hydroacridine, Mg deriv. of (Chelintzev) 2072.

Digitized by Google

Hydroaromatic compounds with *gem*-dialkyl groups (v. Auwers) 2871.

Hydrocarbon, sepn. of $C_{18}H_{28}$ from solanine *s.* (Oddo) 72; $C_{18}H_{30}$ (Rupe) 326; blue, in essential oils (Sherndal) 596; C_5H_{16} (Wallach) 1458; $C_{10}H_{18}$ (Wallach) 1458; $C_{10}H_{20}$ (Wallach) 1458; $C_{10}H_{18}$, isomer, and bromide (Krestinskii) 1897; azulene, a blue (Sherndal) 2089; $C_{26}H_{40}$ and dibromide, $C_{26}H_{44}$ (Windaus) 2246.

Hydrocarbon oils. See *Petroleum.*

Hydrocarbons, optically active, from carvone (Rupe) 325; detecting and detg. solid, in fatty acids (Verona-Rinati) 372; cracking (Freud) 1687; polymerization of unsatd. (Lebedev) 798, 799; action of chloral, etc. on polycyclic (Frankforter) 909; inner cone of hydrocarbon flame (Bubnov) 995, 3014; heats of combustion of aromatic (Roth) 996 (Richards) 1422; prep. of gasoline and kerosene from heavier (Brookes) 1111; formation of aromatic, by electrolysis (Schall) 1583; prep. and m. ps. of higher aliphatic (Levene) 1610; from pentaerythritol (Filipov) 1904; satd., from vacuum tar (Pictet) 2058; unsatd. hydroaromatic, (v. Auwers) 2546; prep. of, of formula Ph_2CHR (Bodroux) 2895; compd. of $AlBr_3$ and (Chugaev) 2898; action of trioxymethylene on, in presence of Al_2Cl_6 (Frankforter) 2900; estn. of aromatic, in cracked petroleum (Rittman) 3126; liquid SO_2 method for detg. aromatic constituents in (Rittman) 3356. *Patents:* Prepg. (Matthews) 127 (Hall) 376 (Vidstrand) 376; generator (Walton) 144 (Van Steenbergh) 2310; gasifying liquid (Empis) 148; paraffin, from liquid residue of petroleum distn. (Humphreys) 244; liquid for internal-combustion engines (McArthur) 244; cracking (Sabatier) 710 (Washburn) (Testelin) 1689 (Fenchelle) 2451; from coals, cannels or shales (Rollason) 711; from tar distn. (Melamid) 712; aliphatic satd. (Sommer) 860; condensation products from unsatd. (Chem. Fab. E. Schering) 1096; hydroxyisopropyl derivs. of (Bayer & Co.) 1371; pure H from (Pictet) 1374; fatty, soap-like products from (Benedix) 2003; dihalogen derivs. of satd. (Perkin) 2291; aromatic and fatty aromatic (Lecher) 2292; heater for, generators (Van Steenbergh) 2310; sepg. solid (Allgem. etc.) 2451; purifying unsatd. (Matthews) 2467; O derivs. of (Badische) 2588; chlorinating satd. (Sparre) 2612; converting heavy petroleum, into volatile (Sabatier) 2814; increasing volatility of (Porges) 2814; addition products of olefin, with SO_2 (Matthews) 2971; atomizing and burning (Stuart) 2979; extg. (Chem. Fab. Heyden) 3340; see also *Petroleum.*

Hydrocellulose (Hauser) 3128.

Hydrochalcones (Bargellini) 447, 1042.

Hydrochloras toponali (Huber) 2794.

Hydrochloric acid, neutralization in stomach and small intestine (Milovsorov) 97; detg. H_3PO_4 in HCl exts. of soil (Berger) 115; action of cold conc., on starch and maltose (Daish) 196; action on isonitroso-α-hydrindone, etc. (Steinkopf) 314; (Engelstad) P 358; scrapers for salt-cake furnaces (Farbw.) P 358; systems formed by, and MeOH with MeCl (Baumé) 402; action on excretion of alkali (Secchi) 477; density of liquefied HCl (Baumé) 547; fusibility curves of binary systems with Me_2O, H_2S, C_2H_6, $EtCO_2H$, MeOH (Baumé) 547; action of H chloride on semicarbazones (Wilson) 604; soln. velocity of Zn-Cu alloys in (Centnerswer) 745; acid agglutination by (Michaelis) 822; for mercerizing (Knecht) 863; equil. of, and gelatin (Procter) 875; hydrolysis of maltose by (Davis) 922; in stomach (Hammett) 929 (Bergeim) 3276; action of alc., on β-phellandrene (Francesconi) 1043; clinical test (Christiansen) 1069; (Schwarzenauer) P 1101; modification of starch by gaseous (Frary) 1132; solubilities of mixts. of Na and K chlorides in (Hicks) 1268; detg. As by heating in, with hydrazine salts and KBr (Jannasch) 1286; in estimating org. N (Drushel) 1613; physiol. activity of combined (Long) 1624; Kayser-Cowles process for (Pietrusky) 1831; absorption tower for making aq. (Raschig) P 1862; estg. in $FeCl_3$ soln. (Romijn) 1971; velocity of soln. of Mg in (Bornsdorff) 2020; action on cantharidin (Gadamer) 2084; action of gas on carbohydrates (Panzer) 2242; reaction between aromatic aldehydes and AcCMe:NOH in presence of (Diels) 2250; formation in evapn. of $MgCl_2$ solns. (Hof) 2359; (Amélie) P 2435. (Howard) P 2572; purification of com. (Coignard) 2697; prep. of *N* (Winkler) 2747; standarization (Hendrixson) 2853; and $KClO_3$ in oxidation of S (Federer) 2918; Ueber die Bedeutung und die Methode der chemischen Bodenanalyse mit starker heisser Salzsäure (Hissink, book) 2963; kinetics of reaction of EtOH-, with phthalic acid (Wegscheider) 3008; H- and hydroxyl-ion activities of solns. of, in presence of neutral salts (Harned) 3156; Brit., works, 3332; see also *Chlorine, analysis.*

Hydrochlorides, alkaloid, from opium (Huber) 2794.

Hydrochlorocholesterol (Moreschi) 796.

Hydrocyanic acid in horticulture (Sargeant) 233; pure (Fab. de produits etc.) P 359; combustion of, to NO (Wehrheim) 417; in plants (Petrie) 475 (Jorissen) 925; estg., in feeding stuffs—in millet and guinea corn (Furlong) 490; analysis (Viehoever) 1019; formation in germination of seeds (Ravenna) 1071, 1630; rate of liberation from linseed (Collins) 1078; fumigation of ships (Roberts) 1523; in sorghum (Willaman) 1949; from haricot beans (Blair) 1949; (Beindl) P 1981. of cassava (Collens) 2406; from beet-molasses waste water (Huber) P 2463; in latex of

Digitized by Google

Hevea brasiliensis (Kerbosch) 2607; characterization in toxicology (Lavialle) 2631; detg., in cherry brandy (Golse) 2686; recovering N as NH_4 salt from, of coal gas (Evans) P 2705; (Lipinski) P 3176.

Hydrodes - *N* - ethyltetrahydroberberine (Freund) 2873.

Hydrodes - *N* - methyltetrahydroberberine *A*- and *B*-, and derivs. (Freund) 2873.

Hydrodiffusion of electrolytes (Smith) 1266.

Hydrofluoric acid in sepn. of Cu and Pb from Sn and Sb (McCay) 277; ind. uses (Stahl) 356; container (Traun, etc.) P 2011; (Girsewald) P 2438; (Bishop) P 2699; saccharification of starch by (Kunz) 3375.

Hydrogen, Pd and (Sieverts) 12; emission of enhanced lines in, atm. (King) 15; wave lengths of H lines (Curtis) 18; red, line (Garbasso) 18; widening of, lines in spark spectrum (Rossi) 18; rate of reaction between Cl and (Melander) 31; series lines of (Lunelund) 173; coulometer (Hatfield) 176; soly. in Fe (Jurisch) 286; CO_2 production from nerve fiber in atm. of (Tashiro) 337; prep. and com. uses (Crossley) 357; α-particles and interaction of Cl and (Taylor) 412; reciprocal action of Ce and (Zhukov) 566; production (Linde) 695; sp. heats of (Mercer) 738; and Pt resistance thermometers (Onnes) 747; isotherms (Walstrs) 747; series spectrum of, and constitution of atom (Allen) 753 (Bohr) 1005 (Vegard) 2484; displacement of metals by (Ipatiev) 766; diffusion of, through Pd (Holt) 877; capillarity of liquid (Onnes) 878; dissociation of (Langmuir) 985 (Isnardi) 3161; passivity— H hypothesis (Flade) 998; effect of dilu. on, potentials of HOAc and "standard acetate" solns. (Walpole) 999; potentials of mixts. of HOAc and NaOAc (Walpole) 999; does ionization of Cl-Knall gas commence on exposure to light? (Le Blanc) 1000; spectrum (Evans) 1002 (Merton) (Bohr) 1269 (Nicholson) 1003, 1269; action on germination period of *Avena sativa* (Plate) 1070; influence on photo-elec. effect of Pd charged with (Stumpf) 1145; review 1269; prepg. (Helbig) 1373; absorption of, by Na-K electrodes (Gowdy) 1419; e. m. fs. in alc.—combinations of, and calomel electrodes (Furness) 1423; ratio of sp. heat for N and (Crofts) 1573; electrode (Barendrecht) 1627 (McClendon) 2915; d., index of refraction and dispersion of liquid (Augustin) 1873; catalytic influence of kaolin on combination of O and (Joannis) 1866; v. p. (Onnes) 2023; elec. cond. of Pd during occlusion of (Beckmann) 2026; potential of, electrode (Mazzucchelli) 2026; diffusion and absorption in quartz glass (Wüstner) 2031; detg. *Ne* for (Eyring) 2182; electrolytic production 2189; for inflating balloons (Fourniols) 2294; app. for prepg. (Kausch) 2329; H–He system (Harkins) 2335; electro-optics of the H mol. (Heydweiller) 2347; influence of silent elec. discharge on mixts. of, and N (Le Blanc) 2479; radiation from elec. source and line spectra (Silberstein) 2484; fusibility of coal ash in mixts. of, and water vapor (Fieldner) 2808; H potentials of NaOH solns. and dissociation const. of water (Frary) 2827; Die Konstitution des Wasserstoff Molekuels (Debye, book) 2836; passage of α-particles through (Marsden) 2837; soly. in various alloys (Sieverts) 3006; photochem. reactions in mixts. of O_2 and (Weigert) 3013; activation by Pt (Eggert) 3014; analyzing gas mixts. contg. (Gautier) 3123; liquefaction of (Meissner) 3149; detn. of P by means of nascent (Ericsson) 3189. *Patents:* (Griffin) 27; (Bosch) 129; (Spitzer) 130; (Soc. Oxy. Franc.) 270; (Uyeno) 357; (Messerschmitt) 359, 360, 698, 699, 2799, 2800; liquefaction of (Lilienfeld) 517; mixt. with N (Scholl) 562; purifying, contg. CO (Bosch) 697; (Bergius) 734; (Mittasch) 1098; from steam (Dicke) 1099 (Messerschmitt) 3341; removing S from (Bosch) 1227; (Badische) 1232, 2437, 2441, 2803; (Naher) 1233; reducing metal with (Kayser) 1297; pure, from hydrocarbons (Pictet) 1374; (Pintsch A.-G.) 1376; purification (Badische) 1376; (Berlin-Anhaltische, etc.) 1536, 2433; (Dicke) 1537; (Levin) 2037; (Schaefer) 2296; (Buchanan) 2434; generator (Jintsch, A.-G.) 2440; (Maschinenfab. Sürth Ges.) 2489; cell for making (Levin) 2741; (Burdett) 3034; (Bosch) 3335.

Hydrogen, analysis in gas mixts. (Burrell) 38; detg. active, in org. compds. (Schlesinger) 75; in org. Hg compds. (Abelman) 279.

Hydrogenation of oils (Colletas) 244 (Robson) 250 (Ellis, book) 389 (Moore) P 389 (Calvert) P 531 (Birkeland) P 729 (Lumbard) 871 (Rivals) 1401 (Ellis) 1698 (Calvert) P 2003, 2323 (Campbell) 2988; of fatty acids (Colletas) 244 (Hausamann) 531 (Wielgolaski) P 975 (Dubovitz) 2001; of cinchonine (Freund) 457; catalyst for (Snelling) P 516 (Erdmann) 1255 (Spieler) P 1852 (Sulzberger) (Wesson) P 2322 (Ellis) P 3372; of oils or fats (Utescher) (Walker) P 729 (Jahn) P 1128 (Ellis) (Richardson) (Bacon) P 2821; equilibria (Padoa) 736, 3008; of fatty acids and glycerides (Asp-Bock) P 868 (Schonfeld) 2988; color reaction for oils of sea animals and their, products (Tortelli) 1255; removing "catalyzer poisons" from oils or fats before (Ellis) P 1257; (Adam) P 1228; (Norman) 1552; (Brochet) 1746, 1912; (Badische) P 2461; of fatty materials (Kayser) P 1401 (Hagemann) P 2003 of unsatd. fatty materials (Hausamann) P 2461; velocity of, of tetramethylbutinediol (Zal'kind) 2067; of C_2H_4 by colloidal Pt (Paal) 2380; of acetylene derivs. (Zal'kind) 2510; (Müller Speisefettfab, A.-G.) P 2605; catalytic, of volatile substances and rate of, of ethylene (Rather) 2653; of fats (Wielgolaski) P 975 (Ellis) P 2990, 3140; fish oils and, products (Davidsohn) 3138; see also *Hydrogen; Reduction.*

Hydrogen bromide. See *Hydrobromic acid.*

Hydrogen chloride. See *Hydrochloric acid.*

Hydrogen compounds with N (Bender) P 1101 (Hlavati) P 2576.

Hydrogen cyanide. See *Hydrocyanic acid.*

Hydrogen ion, effect of, conc. on urease (Van Slyke) 90; Die Wasserstoffionen-Konzentration. Ihre Bedeutung für die Biologie und die Methoden ihrer Messung (Michaelis, book) 91; concn. (Baragiola) 349; conc. of blood (Milrot) 819; swelling of pelt in presence of (Powarnin) 979; changes in, concn. of blood produced by pulmonary ventilation (Milroy) 1074; concn. and optimum temp. of ferment (Compton) 1621; and fermentation (Hagglund) 1791; action on phagocytosis in *Carchesium lachmani* (Koltzov) 2096; system: alc.–H_2O– (Goldschmidt) 2617; conc. in blood under abnormal conditions (Menten) 2775; potentiometer for measuring, concns. (McClendon) 2826; detg., concn. in blood (Levy) 2911; detn. of concn. of (McClendon) 2915, 2937; concns. of *B. coli* cultures (Clark) 2918; detn. of, concn. in sea water (Palitzsch) 2918; activities of solns. of HCl NaOH and KOH in presence of neutral salts (Harned) 3156.

Hydrogen peroxide, formation of tetramethylene diperoxide-dicarbamide (von Girsewald) 77; (Henkel & Cie) P 272, 2742; decomp. of, by heat (Lemoine) 401; oxidation products of maltose with alk. (Lewis) 453; prep. (Cambi) 560; test for (Rogai) 772; enzymic, decomp. (Waentig) 918; (Fischer) P 1009; electrolytic prepn. (Henkel) P 1013 (Weber) P 2191; stabilizing aq. solns. of (Trimble) P 1098; storing (Zirkonglas-G.) P 1101; preventing decomp. (Farago) P 1374; (Weber) P 1584; acidity of, soln. (White) (Callan) 1665; compd. with urea (Richter) P 1830; compd. from urea and HCHO (Girsewald) P 1830; (McGill) 2125; alk. iodide, 2128; removal from water (Erlwein) P 2416; catalysis of, decompn. (Lemoine) 2628; tests for, in milk (Darlington) 2675; new reaction for (Spiro) 2747; soln. of (Wolff) P 2799; (Patek) P 2804; behavior with salts (Kazanetzkii) 2843; increase in acidity of, on standing (Ramsay) 2970; catalytic action of walls of vessel on decompn. of (Klissafoff) 3015; grain steeping expts. with (Deyl) 3113; as spray (Portele) 3114; stable solid, prepn. (Weber) P 3118; influence of dilu. of, on velocity of pptn. of Mn (Walker) 3188; oxidation of pyrogallol by peroxidase and (Bach) 3255; oxidation and reduction by (Fette) 3301; sterilization of receptacles of wood or cellulose pulp with (Ling) P 3314.

Hydrogen sulfide formation from $Na_2S_2O_3$ by yeast (Neuberg) 58; test for, in gas (McBride) 520; density of liquid (Baumé) 547; fusibility curves for systems H_2S–MeOH, H_2S–Me_2O and H_2S–HCl (Baumé) 547; v. p. of (Maass) 876; removing, from coal gas (Burkheiser) P 1243; detg., in coal gas (Way) 1541; oxidation by bacteria (Jacobsen) 1628, detecting bacteria producing (Redfield) 1929; estn. of (Treadwell) 2363; medium for testing for, -forming bacteria (Chamot) 2678; reaction between, and salts of heavy metals in stomach (Meneguzzi) 3296; (Sárvárer Kunst.) 3336.

Hydrohydrastinine (Decker) P 2292.

Hydrojuglones, isomerism—derivs. of β- (Willstätter) 308.

Hydrolecithin (Riedel A.-G.) P 1097, 1829.

Hydrolysis of solanine *s.* (Oddo) 72; of glycogen by enzymes (Norris) 90; velocity of, of starch and maltose by conc. HCl (Daish) 196; of methylated cellulose (Denham) 203; of fatty substances (Wilmart) 250; of MeOAc and catalysis (Lamble) 262; synthetic and hydrolytic activity (Armstrong) 327; calc. of (Goebel) 745; of aspirin (Tsakalotos) 787; auto-, of glycerides of oils and paints (Gardner) 866; of maltose by HCl (Davis) 922; powdered tans and reactions of (Sommerhoff) 979; prepg. colloidal Se by (Gutbier) 1142; of phytin (Anderson) 1622, 2098; glucosides hydrolyzable by emulsin (Bourquelot) 1923; slowness in Fe''' salts (Quartaroli) 2016; acid. of proteins (Gortner) 2098; of flesh albumin (Lob) 2392; of sugar solns. (Hubbard) 2404; estg. raffinose by enzymic (Hudson) 2632; of Na_2CO_3 in soln. (Frary) 2827; influence of NaOH on hydrolytic power of α-glucosidase (Bourquelot) 2896; of proteins (Siegfried) 2905; of proteins by pepsin, trypsin and erepsin (Anderson) 2908; products of, of gliadin, lactalbumin and protein of rice kernel (Osborne) 3073; kyrine fraction obtained on partial, of protein (Levene) 3074; influence of phenols and phenolcarboxylic acids on, of proteins by pepsin (Guglialmelli) 3075; of $ZnCl_2$ (Sordelli) 3185, see also *Water.*

Hydrolytic agent, $Ba(OH)_2$ in estg. tryptophan content of proteins (Homer) 3264.

Hydromelanothallite (Zambonini) 773.

Hydrometallurgy in 1914 (Aiken) 284; of Mich Cu tailings (Leisk) 1451.

Hydrometers, detg. proof-strengths of spirits by Salke's (Carter) 117; testing, 539; (Lucas) P 733; (Angström) 1409.

Hydronephrosis (Keith) 1195.

Hydronitric acid. See *Hydrazoic acid.*

Hydroquinone, sulfonation of (Pinnow) 3007, reaction with alkalies (Frary) 3036.

Hydrosaccharimeter (Stephan) 1261, 2917.

Hydrosols, quantity of peptizing agent and properties of (Zsigmondy) 546; diffusion, pptn. velocity and sedimentation equil. in Se and Au (Westgren) 737; detg. pptn. value of (Hauser) 1414 (Freundlich) 1415, growths or deposits in metastable instr. (Moore) 3069.

Hydrosulfites. See *Hyposulfites.*

Hydroxamic acids (Angeli) 1323.

Hydroxides, effects of, on sugars (Woodyatt

Digitized by Google

926; action of ammono acids on metallic (Franklin) 1016; organosols of metals and, of Pt group (Amberger) 3159.
o - **Hydroxyacetophenone** Cu compd. (Pauly) 1052.
Hydroxy acid(s) and detns. of chem. consts. of fatty acids (Browne) 389; $C_7H_{13}(OH)(CO_2H)_3$, ester and Ag salt (Zal'kind) 1748; $MeC_6H_4C(OH)(CH_2C_6H_4CO_2H)_2$ and derivs. (Zal'kind) 1748; action of NaClO on amides of α- (Weerman) 3233; hydroaromatic α- (v. Auwers) 3238.
Hydroxyaldehydes, derivs. of (Angeli) 1323.
1 - [Hydroxy - *p* - aldehydophenylhydrazone-benzyl] deriv. (Lugner) 1465.
1 - [Hydroxy - *p* - aldehydothiosemicarbazonebenzyl] deriv. and Ag salt (Lugner) 1465.
3 - Hydroxy - 4 - allylaminohexadiene and amino alc. (Le Heux) 1327.
4 - [3 - Hydroxy - 5 - aminobenzyl]hydantoin -HCl (Johnson) 2529.
Hydroxyamino-oximes (Ley) 315.
3 - Hydroxy - 5 - aminophenylalanine, synthesis of hydantoin of (Johnson) 2528.
Hydroxyanthraquinonesulfonic acids, Cr compds. of (Badische) P 1998, 2598.
Hydroxyazo compounds, etherification of *o*- (Charrier) 792; constitution (McPherson) 1330; *o*- from α-naphthol (Charrier) 70.
2- Hydroxy - 2' - benzalaceto - 1' - naphthol glucoside (Bargellini) 1318.
4 - *o* - Hydroxybenzalhydantoin (Johnson) 2528.
4 - *p* - Hydroxybenzeneazophenylmercuric acetate (Jacobs) 1610.
Hydroxybenzoic acids, mol. wt. of (Coninck) 985; basic mercuric salts of *m*- and *p*- (Lajoux) 2527; action of $H(NO)SO_4$ on *p*- (Biehringer) 3233.
[*o* - Hydroxybenzoyl]benzanilide (Mumm) 1485.
Hydroxybenzoyl - *o* - benzoic acids, esters of (Bayer & Co.) P 1097.
[*o* - Hydroxybenzoyl]benzo - *o* - toluidide (Mumm) 1485.
o - Hydroxybenzylamine (Gabriel) 2876.
7 - Hydroxy - 3 - benzyl - 2,5 - dimethyl - benzo - γ - pyrone and derivs. (Jacobson) 2222.
7 - Hydroxy - 3 - benzylflavone and acetate (Jacobson) 2763.
α - Hydroxy - α - benzylhydrindenehydrin - done - β,β - spirane (Leuchs) 3243.
4 - Hydroxybenzylideneamines, polymorphic (Senier) 202.
4 - *o* - Hydroxybenzylideneaminophenyl - mercuric acetate (Jacobs) 1610.
7 - Hydroxy - 3 - benzyl - 2 - methylbenzo - γ - pyrone and derivs. (Jacobson) 2222.
7 - Hydroxy - 3 - benzyl - 5 - methylflavone (Jacobson) 2763.
β - Hydroxybutyric acid, dissoc. const. of (Michaelis) 466.
2 - Hydroxy - 3 - carbomethoxynaphtho - benzyl chloride compd. with $(CH_2)_6N_4$ (Jacobs) 1611–2.
N - **Hydroxycarbostyrilcarboxanilide** (Heller) 311.
N - **Hydroxycarbostyrilcarboxylic acid** and salts (Heller) 311.
Hydroxycarboxylic acids, acid ferrous salts of aromatic (Claass) P 1370.
2 - Hydroxy - 3 - carboxy - 5 - methylbenzyl chloride compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
Hydroxy compounds, substitution in aromatic (Harding) 602; splitting off water from (Riedel, A.-G.) P 2293; influence on soly. of $HgCl_2$ in H_2O (Moles) 3158.
Hydroxycoumarin Ac deriv. (Bargellini) 2239.
α - Hydroxycyclohexane - 1,1 - diacetic acid derivs. (Beesley) 3060.
α - Hydroxy - α' - cyclohexan - 1 - olsuccinic acid derivs. (Beesley) 3061.
2 - Hydroxy - 3,5 - dibromobenzyl chloride compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
2' - Hydroxy - 3',4' - dimethoxychalcone and corresponding hydrochalcone (Bargellini) 448.
Hydroxydimethylanthraquinone (Bradbury) 607.
Hydroxydimethyldiphenyldihydrofurane and derivs. (Favorskii) 1471.
Hydroxydimethyl - 4 - methylene - γ - benzopyranols and derivs. (Collie) 1470.
o - Hydroxy - m - ethoxybenzoyldiethylacetic acid (Freund) 2874.
Hydroxyethylhydrazine and salts (Gabriel) 322.
Hydroxyethyl iodide deriv. (Jacobs) 2077.
Hydroxy fatty esters of high mol. wt. (Freudenberg) P 1098.
Hydroxyguanidines, salt formation (Ley) 315.
α - Hydroxyheneicosoic acid (Le Sueur) 2884.
Hydroxyheptoic acid and Et ester (Venus) 1904.
1 - Hydroxy - 1 - homoveratryl - 5,6 - di - methoxyindene (Pyman) 1311.
Hydroxyhydrindamine, pharmacol. action of stereoisomers of (Ikeda) 2671.
7 - Hydroxy - 3 - *m* - hydroxyphenoxy - 3 - benzyl-2-methylbenzo-γ-pyrone (Jacobson) 2222.
α - Hydroxyimino - γ - phthaliminoacetone (Bradshaw) 2518.
Hydroxyindigos (Friedländer) 323.
α - Hydroxyisocamphoronic lactones (Lipp) 319.
Hydroxyisopropyl derivatives of hydrocarbons (Bayer & Co.) P 1371.
Hydroxyisopropyl - *p* - nitrobenzamide (Jacobs) 2075.
10 - Hydroxy - 5 - keto - 1,2 - dimethoxy - 10 - ethyldihydroanthracene (Sirker) 3231.
Hydroxylamine, cyclic derivs. (Friedlaender) 1052; heat of neutralization of (Ellingson) 1268; detg. (Hatta) 1342.
o - Hydroxylaminobenzoylmandelic thioamide (Albert) 1775.

Digitized by Google

Hydroxyl ions, reaction of earthworms to (Shohl) 484; activities of solns. of HCl, NaOH and KOH in presence of neutral salts (Harned) 3156.
2 - Hydroxy - 3 - methoxy - 5 - aldehydo - benzyl chloride compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
2 - Hydroxy - 3 - methoxybenzaldehyde and derivs. (Rupp) 2233.
Hydroxymethoxybenzoic acids, 2,3-, and derivs. (Rupp) 2233; 2,6- (Clewer) 2885.
2' - Hydroxy - 4' - methoxychalcone (Bargellini) 448.
Hydroxymethoxydiethylacetylbenzoic acids and hydrate(?) (Freund) 2874, 2875.
Hydroxymethoxydiethylindandione and acetate (Freund) 2874; and Na salt (Freund) 2875.
2' - Hydroxy - 4' - methoxyhydrochalcone (Bargellini) 448.
2 - Hydroxy - 3 - methoxy - β - phenylacrylic lactone (Rupp) 2233.
2 - [p - Hydroxy - m - methoxyphenyl] - 6 - methylquinoline - 4 - carboxylic acid (Davis) P 1668.
5 - p - Hydroxy - m - methoxyphenyl - 1 - phenyl - 3 - hydroxy - 1,2,4 - triazole and derivs. (Oddo) 2525.
2 - Hydroxy - 3 - methoxy - β - phenyl - propionic lactone and di-Br deriv. (Rupp) 2233.
α - Hydroxy - β - methoxysuccinic acid (Haworth) 1035.
Hydroxymethylanthraquinones (Bailey) 1528.
2 - Hydroxy - 4 - methyl - 5 - bromobenzoic acid Me ester (von Walther) 2643.
Hydroxymethylene ketones, formation of heterocyclic compds. from, and cyanoacetamide (Sen-Gupta) 2892.
Hydroxymethylenesabinaketone (Kötz) 208.
ω - Hydroxy - 5 - methylfurfuraldehyde (Cunningham) 214.
2 - Hydroxymethylhydrindene and phenylurethan (Kenner) 461.
β - Hydroxynaphthalene - 6 - sulfonic acid derivs of. (Bayer & Co.) P 1096.
Hydroxynaphthoic acid, org. Mg compds. and Me ester (Preissecker) 598; tetrapyridine oxydititaniumhexa - β - hydroxynaphthoate (Hauser) 1180; condensation of terephthalaldehyde with Me ester of 2,3- (Lugner) 1464; condensation products from arylamides of 2,3- (Griesheim-Elek.) P 1997, 1998; (Heilmann & Co.) 2454.
1 - Hydroxynaphthyl - 2 - diethylcarbinol (Preissecker) 598.
1 - Hydroxynaphthyl - 2 - β - propylene and bromide (Preissecker) 598.
Hydroxynitrobenzaldehydes and derivs. (Friedländer) 323.
4 - [2 - Hydroxy - 5 - nitrobenzal]hydantoin (Johnson) 2529.
2 - Hydroxy - 5 - nitrobenzyl chloride compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
α - Hydroxy - β' - nitropyridine (Chichibabin) 1902.
α - Hydroxy - α - octyldodecanedicarboxylic acid and Ag salt (Le Sueur) 603.
α - Hydroxy - α - octylsebacic acid and derivs. (Le Sueur) 603.
m - Hydroxyphenyl acetate, odorless (Knoll & Co.) P 1976; (Knoll & Co.) P 1976.
4 - Hydroxyphenylalkylglycines as phot. developer (Anilin-Fab.) P 274.
7 - Hydroxy - 8 - phenylbenzo - γ - pyrone (Jacobson) 2763.
7 - Hydroxy - 2 - phenyl - 8 - benzylbenzo - γ - pyrone and acetate (Jacobson) 2763.
7 - Hydroxy - 2 - phenyl - 3 - benzyl - 5 - methylbenzo - γ - pyrone (Jacobson) 2763.
α - Hydroxy - β - phenylbutyrolactone and Na deriv. (Hall) 1038.
α - Hydroxy - β - phenylcrotonolactone and derivs. (Hall) 1038.
p - Hydroxyphenyldi - α - naphthylmethane and K salt (Magidson) 3057.
Hydroxyphenylethylamine, action of p-, on smooth muscle (Quagliariello) 484; acyl derivs. of p- (Hoffmann-La Roche & Co.) P 2293.
2 - Hydroxyphenyl - 3 - hydroxy - 2 - naphthyl amine (Kehrmann) 626.
7 - Hydroxy - 8 - phenyl - 2 - methylbenzo - γ - pyrone and derivs. (Jacobson) 2763.
4 - Hydroxyphenylmethylglycine as developer (Valenta) 1722.
5 - o - Hydroxyphenyl - 1 - phenyl - 3 - hydroxy - 1,2,4 - triazole and Ac deriv. (Oddo) 2524.
p - Hydroxyphenyltrimethylammonium ferrocyanide (Lagutt) P 2291.
p - Hydroxyphenyltrimethylammonium hydroxide (Ellis) P 1669.
p - Hydroxyphenyltrimethylammonium salts (Sandoz) P 2356.
Hydroxypiperidines and derivs. (Emmert) 2093; γ-, HCl (Koenigs) 2254; γ-, salts (Koenigs) 2254.
γ - Hydroxypropylbenzamide (Gabriel) 2876.
γ - Hydroxypropyl iodide deriv. (Jacobs) 2077.
γ - Hydroxypropyl - p - nitrobenzamide (Jacobs) 2075.
γ - Hydroxypyridine, ethers of, and derivs. (Koenigs) 2254.
Hydroxyquinoline and purine metabolism (Boenheim) 657.
Hydroxyquinoline compounds contg. I and Bi (Hahl) P 1095 (Bayer & Co.) P 2426, 2796; esters (Wolffenstein) P 1829; double salts (Fritzsche & Co.) P 2569.
δ - Hydroxysantonin oxidation to santonoic acid (Wedekind) 2249.
Hydroxystearic acid, action of P_2O_5 and $ZnCl_2$ on glyceride of (Fokin) 1898.
N - Hydroxy - 2 - thio - 3 - benzoylindole and acetate (Albert) 1775.
Hydroxythiophene derivatives, synthesis from aminocrotonic ester (Benary) 1784.

Ilmenite, arc (Ladoff) 2034; Ti oxide from (Farup) P 3214.
Ilun, 954.
Imbedding, small objects (West) 2660.
Imbibition, of bagasse (Pellet) 1132, 1701.
Imerinite (Lacroix) 2365.
Imhoff tanks. See *Sewage.*
Imidazoles, anthraquinone series (Schaarschmidt) 784.
Imidazole series, *N*-acyl derivs. (Gerngross) P 2568.
Imidazolylethylamine, detoxicating β- (Eustis) 1941; acyl derivs. of 2- (Hoffmann-La Roche & Co.) P 2293; action of β-, and relation to asthma and anaphylaxis (Eustis) 3094.
Imide, $NH[CH_3CH(OH)CH(OMe)_2]_2$ (Wohl) 1050.
Imides, replacement of halogen in halogenyl (Scheiber) 915; action of ammono acids on metallic (Franklin) 1016; action of acid amides on, of heavy metals (Franklin) 3037.
Imido acid, esters of (Schmidt) 83.
Imidothioacetic acid, Et ester-HCl (Schmidt) 83.
Iminoacetonitrile and nitrate (Bailey) 1332.
Imino acids, supposed instability of higher (Shlezinger) 3054.
β-Iminoazolylethylamine, action on smooth muscle (Quagliariello) 484.
α,α'-Iminobis-2,4-dihydroxy-1-benzyl - 3 - naphthoic acid, Et ester (Nowak) 599.
3,3' - Iminobis - 5,5' - thiotolene - 4,4' - dicarboxylic acid, Et ester and K salt (Benary) 1785.
Iminodiacetic acid, menthyl ester (Stadnikov) 3052.
α - Imino - γ - keto - β - acetylhydrindene (Scheiber) 915.
α - Imino - γ - keto - β - benzoylhydrindene (Scheiber) 915.
3 - Imino - 6 - methoxycoumarin - 3 - carboxylic acid, Et ester (Perkin) 199.
Iminophenols (E. Schering) P 127.
[Iminophthalyl]acetoacetic acid, Et ester (Scheiber) 915.
Immune body. See *Amboceptors.*
Immunity, normal diphtheria (Gröer) 103; Immunology and Serology (Kolmer, book) 104; defensive measures of organism (Heger) 213; with fowl spirochetes (Aoki) 223; anaphylaxis and (Gurd) 480; Infection, Immunity and Sp. Therapy (Kolmer, book) 919; Abderhalden reaction (Bronfenbrenner) 920; tests in coccidioidal granuloma (Cooke) 1196; lipoids in (Thiele) 1198; hypersensitiveness to pneumococcus protein—relation to (Clough) 1503; nature of anaphylatoxin (Bronfenbrenner) 1503; influence of oxidizing substance on immune reactions (Arkin) 1935; transmission of, against cholera to offspring (Hadley) 2399; typhoid (Alstaedt) 2668; art. production in mammalian plasma of substances inhibitory to growth of cells (Walton) 2940; syphilitic reinfection—, and treatment (Smith) 2943; pneumococcus (Tillgren) 3092; Applied Immunology (Thomas, Ivy, book) 3295.
Immunization, of guinea pigs with tubercle bacilli (Lindemann) 100 (Barber) 2668; against typhoid fever (Gay) 333; against substances inhibiting tumor growth (Fleischer) 483, 931; with toxic and compensated toxins (Löwenstein) 653; against anticoagulating effect of hirudin (Vera) 654; (Fichera) 1200; with tetanus toxin-antitoxin mixts. (Eisler) 1502; to hay fever (Gottlieb) 1937 (Oppenheimer) 2670; serum proteins of animals during rinderpest and during (Hartley) 2266; concn. of protective bodies in antipneumococcus serum (Chickering) 2937; tests with glanders vaccine (Mohler) 3090; reciprocal relations of virulent and attenuated cultures in active (Hadley) 3091.
Immunising substances (Kalle & Co.) P 847; antitetanic serum (Tizzoni) 3078.
Immunochemistry. See *Immunity.*
Imonium base, $HONMe_2:C_6H_4:NR$ (Wieland) 2538.
Impact, ionization by (Davis) (Farwell) 1425.
Impact test, Charpy, on treated steels (Thomas) 3208.
Impregnation of textiles (Lisis) 1250; of cables, 2007. *Patents:* Of fabrics (Lloyd) 384 (Destribats) 1124 (Anhydrat-Leder-Werke A.-G.) 3378; medium (Pollacsek) 697; of fibrous materials (Anhydrat-L.-W. A.-G.) 725; compn. for preventing rust (Eberhard) 726, 1126; with rubber (Golombek) 1136; cellulose and resinous agent for (Günthel) 1232; compns. for sacks (Mason) 1672; process (Elektro-Osmose) 2354; of cotton on spool (Knoll) 2458; insulating compn. for, of elec. coils (Baekeland) 3334.
Imprinting, metal foil for (Gubinol-Ges.) P 2442.
Inactivating, complement (Schmidt) 1198.
Inanition, tissues of fasting animals (Mayer) 645 (Morgulis) 2664; creatinine and creatine in (Graham) 646; fasting flounders (Morgulis) 826; chem. and physiol. studies of man fasting 31 days (Benedict) 1498; Study of Prolonged Fasting (Benedict, book) 1500; change in amino acids during (Francesio) 1931; urine during 2-week fast (Watanabe) 1931; and acidosis (Folin) 1938; glycogen in dogs during (Michaëlesco) 2263; intestinal flora of rabbits subjected to (Rougentzov) 2921; resistance of fasting dogs to hemorrhage (Howe) 3087; pepsin and trypsin in fasting stomach (Dorner) 3254; excretion of creatine during (Zeman) 3277; influence of protein feeding on elimination of creatine in (Rose) 3277; acidity of human urine during (Zeman) 3279.
Incandescent bodies. See *Lighting.*
Incineration, loss of SO_3 and of Cl by (O'Sullivan) 573; of garbage (Carr) P 1360; present state of refuse (Steck) 3313.

Digitized by Google

Incinerator, refuse (Woodman) 1523 (Maffitt) 2413 (Conant) 2786; garbage and rubbish (Hering) 1645.
Inclusions, origin in dikes (Powers) 1592.
Incompatibilities of Sr and Bi mixt. (Sharman) 353; medicinal (Lespinasse) 811; of urotropine with Li benzoate and official medicaments, 2690; (Scoville) 2967.
Incubation, tower and manure chambers (Beccari) P 1964.
Incubator for bacteriol. work (Hearson) P 1343.
Indandiones, synthesis of (Freund) 2874.
Indanthrene series, vat dyes of (Steindorff) P 2454.
Indene, oscillation of double linkage (Courtot) 1745.
Indenedicarboxylic acid, and di-Et ester (Bougault) 614.
Index of refraction. See *Refractive index.*
India rubber. See *Rubber.*
Indican, prep. of (Jolles) 1308; new reactions (Jolles) 2883; prep. from urine (Schwenk) 2883; photochem. formation of indigo from (Neuberg) 3076; estg., in urine (Jolles) 3081.
Indicanemia (Tschertkoff) 220.
Indicators for Fehling method (Breckler) 279; colloid chemistry of (Hantzsch) 406; (Hantzsch) 418; Me red (Thomson) 572; for sp. gr. of gases (Schaull) P 733; (Walpole) 812; blue and red Congo dye acids (Hantzsch) 1175; ionization consts. of (Shaeffer) 1265 (Paulus) 2016; for proportion of combustible gases in air (Williams) P 1559; hemolysins and hemagglutinins as, in syphilis (Pfeiler) 1804; stopper for distns. (Ferraro) 2165; in pyroligneous acid (Johlin) 2309; for water analysis (Klut) 2409; for titrating alkaloids (H. P.) 2566; choice of, in titrimetry (Melckebeke) 2628; red cabbage dye (Eckerlin) 2745; interat. change of Me red (Minovici) 3043; see also *Phenolphthalein*, etc.
Indigo, OH derivs. (Friedländer) 323; Indian, ind. (Perkin) 528; theory of dyeing with, vat (Marbe) 1119; action of injected colloidal (Oelze) 1204; colloidal (Hutzler) P 1251; catalytic reduction (Brochet) 1602; indigoid dyes contg. S (Albert) 1775; condensation products (Farbw.) P 1998 (Posner) P 2456; leuco derivs. of, dyes (Chilikin) 2507; red indigoid vat dye (Bauer) 2596; indigotin in Japanese (Sato) 2593; indigoid dyes (Bayer & Co.) P 2597; indigoid vat dye (Kalle & Co.) 2599; blackening of leaves of wild (Clark) 2773; natural *vs.* synthetic (Srivastava) 2984; Indigosynthese (Salmony, book) 2986; photochem. formation from indican (Neuberg) 3076; dyes (Kalle) P 3368; see also *Dyes, vat; Thioindigo.*
Indigo series, oxidation products of (Farbw.) P 1999.
Indigotin, in Japanese indigoes (Sato) 2593.
Indigo-white (Badische) P 2598.
Indirubin, synthesis (Albert) 1775; alkyl ethers of, oxime (Farbw.) P 2598; derivs. of (Farbw.) P 3368.
Indium, morphotropic relations between salts of trivalent metals and those of Sc, Be and (Jaeger) 990.
Indole, estg. bacterial (Lewis) 1341; new synthesis (Gluud) 1615; reactions (Madelung) 2254 (Baudisch) 2915; bacterial action on (Herzfeld) 2394; detection of, reactions (Baudet) 2549; from digestive products of fibrin and casein (Moraczewski) 2907; formation by *B. coli* (Fischer) 2920.
Indole derivatives, Mg complexes (Chelintzev) 2071; contg. S (Madelung) 2253; spectroscopic exam. of color reactions of (Homer) 3074.
2 - Indole - 3 - *N* - hydroxythioindolindigo and *N*-benzoate (Albert) 1776.
Indophenolsulfonic acid (Schmidt) P 1122.
Indoxyl, new deriv. of (Jolles) 2883.
Induction, period of, and passivity of Zn (Tzentnershver) 3160.
Induction furnace. See *Furnace, electric.*
Inertia of gas discharges (Lindemann) 749; electromagnetic, and at. wt. (Nicholson) 3170.
Infant feeding. See *Nutrition.*

Inhibition, of coagulation (Thaysen) 1790; of drugs on vaso-constriction (Macht) 1807; enzyme (Lichtwitz) 2098; of tumor growth (Leighton) 483 (Fleisher) 483, 931.

Injection of mold spores (Blakeslee) 1936; hypodermic, of Fe in anemia (Chistoni) 1939.

Injector apparatus (Hart) P 398.

Injury, as quant. conception (Osterhout) 1068.

Inks, Chemistry and Technology of Printing (Underwood, Sullivan, book) 1849; Fe tannate (Hinrichsen) 2155; printing (Anon.) 2155 (Preisser) 2714; history of writing (Martell) 2714. *Patents:* Printing (Sureties) 158 (Hochstetter) 248 (Turkin) 1398 (Posse) 2000; sepg. fiber from printing (Werst) 1246; documentary (Padberg) 1552; removing, from printed paper (Cline) (Winestock) 1691; basis for printing (Quick) 1849 (Wolff) 2155; for oscillating or rotating mimeographs (Hochstetter) 3370.

Inner friction. See *Friction.*

Inner salts. See *Salts.*

Innervation, law of crossed (Meltzer) 2401.

Inoculation, by isomorphous substances (Hasselblatt) 541; and yield and protein content of alfalfa and clover (Arny) 2559; see also *Soils.*

Inocybe (Ford) 218.

Inorganic salts. See *Salts.*

Inositol, synthesis (Müller) 88; (Diels) 310; and derivs. (Griffin) 2090.

Inosityl triphosphate (Anderson) 1622.

Insanity. See *Mental diseases.*

Insecticides, plant poisons in agr. and ind. (Crivelli) 348; fluid ext. of larkspur seed (Williams) 692; (Tommasi) 1525; contg. As and Pb (Sonntag) 1819; valuation of com. arsenate of Pb (Robinson) 1963; toxicity of (Woodworth) 2102; quassiin (Parker) 2789; analysis (Averitt) 3320. *Patents:* (Edmunds) 116; (Peck) 233; (Keep) 503; N bases (Chem. Fab. Nördlinger) 503, 1087, 1364; alkali-S compd. (Hite) 1220; (Hill) 1960; (Grether) 2560; modifying, preps. (Soc. de produits, etc.) 2791; (Terry) (Calderwood) 3114; powdered (Watson) 3321; see also *Disinfectants; Sprays.*

Insects, protecting twine from (Landsberger) P 864; "cerodecytes" or "oenocytes" of (Hollande) 1513; constituents required for growth in (Loeb) 1944; air stores of aquatic (Ege) 2404; eyes of nocturnal (Buginon) 3102.

Instability, supposed, of higher imino acids (Shlezinger) 3054.

Insulation, electric, of Al wire (Pannell) 268 (Skinner) 1878 (Küttner) P 1600 (Spezialfabrik, etc.) P 2354; (Lamme) 561; and p. d. between cables and ground (Gavand) 893; law of "corona" and spark-over in oil (Peek) 2487.

Insulation, thermal, for refrigerating rooms (Thornton) 128; of high-temp. equipment (Boeck) 2572.

Insulators. *Patents:* compn. (Keener) 1374; plastic masses for (Regal) 1377; refractory (Bölling) 1379; from osier bark (Petz) 2712; varnish (Baeder) 2715; (Forbeser, etc.) 2800; waterproofing fibrous (Heide) 2808; (Schröter) 3340.

Insulators, electric, properties of solid dielectrics (Curtis) 178; altitude and spark-over voltage (Peek) 268; depreciation (Austin) 268; elec. properties (Schwaiger) 561; surface potential of solns. in contact with (Borelius) 749; testing specifications (Thomas) 758; elec. excitability and cond. of liquid (Holde) 879, 1389; (Jollyman) 1276; breakdown strength of oils (Kock) 1277; testing rubber gloves for 1859; dielec. properties (Wagner) 1879; testing porcelain (Chernyshoff) 1879; frictional electricity on (Jones) 1879, 2482; sparking plug 1982; and porcelain strain (Foster) 2624; safe operating temp. for mica armature coil insulation (Newbury) 3034. *Patents:* On Al wire (Presser) 27; (Friedburg) (Menningen) 179; (Locke) 269, 852; laminated sheets for (Meirowsky) 563; (Bölling) 701; porcelain (Boehm) 1009; (Barringer) 1230; glass (Brookfield) 1540; in sheet form (Longmore) (Sanborn) 1672; (Weidinger geb. Dresser) 1673; (Rowley) 1832; (Dawson) 1978; elec. insulating mixt. (Thomas) 3135 (Baekeland) 3334; for high voltage line conductors (Locke) 3175; (Meirowsky & Co.) 3336; from coal tar (Rosen) 3352.

Insulators, thermal, diatom brick 958; tests of elec. ovens (Kennelly) 1153; "Fibrox" (Weintraub) 1276; (Jakob) 3149. *Patents:* Coating (Schön) 130; flooring and heat-insulating comp. (Merrylees) 131; fibrous (Gen. Elec. Co.) 133; (Beindorff & Co.) 699; from flax straw (Lappen) 722; cork (Grünzweig & Hartmann) 1100; (MacFarland) 1691, 2432; (Rowley) 1832; Na or K silicate (Maywald) 2300; vitrified (Thomas) 2300; (Oesterreich, etc.) 2434; (Muench) 3119.

Intensifier for autochromes 272; for photography (Namias) 273.

Interference, X-rays and, in crystals (Friedrich) 554; phenomena with X-rays and crystal gratings (Laue) 1581; model for illustration of X-ray, phenomena (v. Hauer) 1862; in study of spectrum lines (Merton) 2481; phenomena to be expected when Röntgen rays pass through diatomic gas (Ehrenfest) 3170.

Interferometer for analysis of soins. (Adams) 1587; measurement of yeast fermentation by (Wolff) 1967; Zeiss, for gases (Lucion) 2329; theory of Rayleigh-Zeiss (Adams) 3162.

Interstrain theory of hardness (McCance) 285, 777.

Intestinal obstruction (Draper) 101; (Whipple) 2669.

Intestines, neutralization of acid (Milovsorov) 97 (Zaitzev) 3285; action of morphine on (Zunz) 336; effect of injection of NaCl and $MgSO_4$ into (Sato) 337; resistance to gastric digestion (Marie) 630; absorption of protein and fat after resection of 1/3 of small (Palmer) 646; permeability of, for cow casein (Modigliani) 814; milk feeding and intestinal flora (Rettger) 1191; reflexes from mucosa of, to stomach (Brunemeier) 1803; action of drugs and exts. on (Young) 1941; action of colchicine on (Führer) 2945; intestinal absorption of albumin in newborn and in infants with intestinal affections (Lawatschek) 3096; action on amino acids (Lombroso) 3274.

Intoxication, chronic Cu (Harnack) 89; anaphylactic and apotoxic (Behring) 321; with veronal (Mattison) 937; of rabbits by uric acid (Cosentino) 1349; of rabbits by bacterial products (Penfold) 1638; by C_6H_6 vapors (Heffter) 1805; chem., of maize (Jungelson) 2102; pregnancy (Van Hoogenhuijze) 2669; proteose (Whipple) 2669; chem. change in bile in liver (D'Amato) 2939; food, of infants (Howland) 3278; see also *Alcoholism; Poisoning.*

Inulase, influence of medium on action of, of *A. niger* (Kiesel) 923.

Inulin, anaphylatoxin formation with (Nathan) 223.

Inversion, hydrolysis of maltose by HCl under Herzfeld conditions of (Davis) 922; of sucrose (Hudson) 1342, 1482 (Lamble) 1420; detg. sucrose in beet molasses—, in neutral soln. (Saillard) 1404; influence of glycerol on (Rossi) 2257; of cane sugar in syrupus (Mayer) 2792; see also *Walden inversion.*

Invertase, thermostable form (Durieux) 328; and utilization of cane and grape sugars (La Franca) 477; temp. and, content of yeast (Meisenheimer) 641; inversion of sucrose by (Hudson) 1342, 1482; in blood of dogs after parenteral injection of sucrose (Lo Monaco) 1349; detg. sucrose in molasses by (Pellet) 2990; consts. for double polarization method using (Pellet) 3374.

Invertin, distribution in tissues of beets (Colin) 3085.

Invert sugar. See *Sugar, invert.*

Involution, autolysis and (Morse) 2404.

Iodates, temp. coeffs. of reciprocal reactions of I-, equil. (Skrabal) 996; ammoniated (Ephraim) 2194.

Iodeol, 954.

Iodia (Puckner) 124.

Iodides, and absorption of granulation tissue and fat-free tubercle bacilli (Hirsch) 106; elimination in urine (Amstad) 1806.

Iodine, fluorescence of, vapor (Westphal) 16 (McLennan) 408; and absorption of granulation tissue and fat-free tubercle bacilli (Hirsch) 106; solutio iodii spirituosa (Italie) 123; extg., from marine plants (Gloess) P 131, 518; prep. of Wijs' soln. (Dubovitz) 388 (Niegemann) 2820; making 0.1 *N*, soln., U. S. P. (E'We) 513; from ashes of algae (Klingbiel) P 518; accumulation and formation in organism (Blum) 649; action of, ion on heart and blood vessels (Macht) 659; administration during use of Hg in eye (Grumme-Fohrde) 661; in iodotannic sirups (Debreuil) 692; system: H_2O–KI–I (Jones) 878; diet of marine algae and, of thyroid (Hunter) 927; crystals of org. compds. colored blue by (Barger) 991; temp. coeffs. of reciprocal reactions of, -iodate equil. (Skrabal) 996; sublimation (Koehler) 1137; distribution in cell from org., preps. (McLean) 1201; therapeutic action (Jobling) 1201; germicidal value (Maben) 1343 (Comstock) 2661; and growth of tissues *in vitro* (Pitini) 1349; surgical dressings contg. (Fonzes-Diacon) 1368; v. p. (Baxter) 1414; viscosity of, vapor (Rankine) 1414; action on colchiceine (Windaus) 1481; and autolysis (Kepinov) 1509; absorption of oil of anise (Morin) 1531; condensation nuclei produced by action of light on, vapor (Pealing) 1579; in fetal thyroid gland (Fenger) 1636; C_6H_6 in prep. of tincture of (Ceppellini) 1663; incompatibility of tincture of, and $HgCl_2$ soln. (Reutter) 1664; from seaweed (Hargreaves) P 1673 (Gloess) P 2801; iodized cinchona bark (Mouchet) 1828; stable tincture of, free from HI (Gaglio) 1972; and vaccination (Scott) 1973; blue adsorption compds. of (Barger) 2059; Landau's, serum test for syphilis (Stillans) 2100; substitute for tincture (Schumacher) 2128; as a dehydrating and condensing agent (Hibbert) 2248; prepg. tincture (Riccobono) 2286; test for functional capacity of kidneys (Erofiev) 2666; from Russia 2797; ointments (Fried) 2968; dissociation of, vapor by elec. sparks (Kropp) 3019; in tuberculous tissues and in thyroid gland (Lewis) 3091; Influence of Concn. of KI on Rate of Diffusion of, in KI Soln. (Diggs, book) 3167; absorption of, by dog thyroid (Marine) 3281; effect of blood flow on, in thyroid gland (Watts) 3283; see also *Iodine number.*

Iodine, analysis, in *unguentum kalii iodati* (Darge) 121; in *pharmaceutical preps.* (Lormand) 1529; in presence of Cl and Br (Barnebey) 1728 (Bekk) 2042; in body fluids (Schumacher) 1923; in urine (Schumacher) 2548; in presence of org. matter (Krauss) 2913; in water (Skinner) 3310.

Iodine chlorides, ionization of Br solns. of ICl_3 (Plotnikov) 2475.

Iodine compounds, therapeutic use of org. (McLean) 108; (Norsk Tangsyndikat) P 362; with hydroxyquinoline (Hahl) P 1095 (Bayer & Cb.) P 2426, 2796; Die organischen Verbindungen m. mehrwer-

Digitized by Google

tigem Jod (Willgerodt, book) 1919; occurring in thyroid (Kendall) 2673; gallocarboxylic acid compd. contg. Bi and I (Berendes) P 2696.

Iodine number of linseed and petroleum oils (Smith) 157; detg., of fats (Weiser) 158; detg., in alc. liquors—, of essential oils (Marcille) 1092; detg. (Pagniello) 2602; relation of I values of mesenteric and kidney fatty acids to those of liver fatty acids in pregnant and lactating rabbits (Cooper) 2932.

Iodine pentoxide, detg. CO by, method (Froboese) 1287.

Iodine preparations, pasta iodi et amyli, B. P. C. (Boa) 1667.

Iodine salts, in phot. developer (Lüppo-Cramer) 272; iodic salts (Fichter) 1587.

***m*-Iodoacetaminomethylbenzoic acid**, compd. of Et ester with $(CH_3)_4N_4$ (Jacobs) 1612.

Iodoacetylaminoethanol and derivs. (Jacobs) 2075.

Iodoanilinesulfonic acids, mol. cond. of (Boyle) 3155.

Iodobenzyl bromide, compd. of *p*-, with $(CH_3)_4N_4$ (Jacobs) 1611; deriv. of *o*- (Jacobs) 2077.

***m*-Iodochloroacetylaniline** and deriv. (Jacobs) 2073.

3-Iodochloroacetyl-*o*-toluidine and deriv. (Jacobs) 2073.

4-Iodo-3,5-dinitrotoluene (Körner) 1479.

Iodo-eosin, diffusion of, from ether through rubber into ether (Rosenbloom) 3071.

***p*-Iodoguaiacol**, action on blood (Simon) 224.

Iodohydrins of phenylcyclohexene and phenylmethylcyclohexene (LeBrazidec) 1912.

Iodomagnesium alcoholates, reaction of esters with (Stadnikov) 3051, 3052.

Iodometry, after-coloring in titrations (Müller) 768 (Kolb) 1726; detn. of I in presence of chlorides and bromides (Barnebey) 1728.

α-Iodopalmitic acid, action of Ag on (Jones) 1065.

***o*-Iodophenyl methyl sulfide** and sulfone (Zincke) 2649.

Iodophthalic acids, 3- and 4-, di-Me esters of (Kenner) 206, 207.

γ-Iodopiperidine and salts (Koenigs) 2255.

***o*-[β-Iodopropio]-*p*-cresol** (v. Auwers) 84.

Iodopropionamide, α- and β-, and deriv. (Jacobs) 2074.

Iodopropionyl-*o*-anisidine, α- and β-, and deriv. (Jacobs) 2074.

Iodosalicylic acid, Ba salt (de Coninck) 2058.

Iodosuccinic acids (Westerlund) 2544.

Iodotannic sirups, I in (Debreuil) 692; fluid ext. for 2126.

α,α-Iodothiotolene (Vlastelitza) 1750.

Iodothyrin, influence on secretion of cerebrospinal fluid (Frazier) 2941.

3-Iodotolyl methyl 4-sulfide and derivs. (Zincke) 55.

Iodoxybenzoic acid, influence of Na salt on immune reactions (Arkin) 1935.

Ionic mobility. See *Ions; Transference number*.

Ionium, recovery from Olary ores (Radcliff) 1271; range of (Meyer) 2187; life-period of (Soddy) 2837.

Ionization, electrolytic, of acids (Dawson) 543; consts. of indicators (Shaeffer) 1265 (Paulus) 2016; equil. (Kendall) 1416; velocity of, at low temps. (Normand) 1572; in abs. EtOH (Robertson) 2018; of Br solns. of ICl_3 (Plotnikov) 2475; complex (Bloomberg) 3153; in solvents of low dielec. const. (Turner) 3154; complex, with two complex ions (Bloomberg) 3155; see also *Dissociation*.

Ionization, gaseous, potential of Hg vapor (Newman) 263; by γ-rays (Peirce) 888; does, of Cl-Knall gas commence on exposure to light? (LeBlanc) 1000; (Thomson) 1265, 2027; by impact (Davis) (Farwell) 1425 (Harlow) 2028; of metals by cathode rays (Campbell) 1429; (Salles) 1430; (Thompson) 2027; in elec. discharges (Briner) 2479; by positive rays (Campbell) 2623; of gas mols. due to collisions with electrons (Nesturch) 2730; ionizing potential of X-ray tube (Drew) 2836; emission of corpuscles in chem. reactions (Tanatar) 3015; residual, in gases—residual, of air inclosed in vessel of ice (McLennan) 3026; potentials and spectra of Hg, Cd and Zn (McLennan) 3155; produced during fermentation (Potter) 3167.

Ions, electrolytic, Complex, in Aq. Solns. (Jaques, book) 18; ionic equil. across semipermeable membranes (Donnan) 171; removal from colloidal adsorptions (Schweriu) P 237; antagonism between anions as affecting soil bacteria (Lipman) 499, 1649; reactions of (Schroder) 544; diffusion of, in permutite and natrolite (Schulze) 746; antagonistic action of salts due to oppositely charged (Loeb) 810; neutral salt action and, in soln. (Poma) 991; action of anions on germination period of *Avena sativa* (Piate) 1070; hydration of, at infinite dilu. (Smith) 1266; mobility of cations (Heydweiller) 1417; complex, of Ni and Co with cyanogen (Rossi) 1438; calcn. of quantity of water involved by (Remy) 1569; neutralization of adsorbed (Bancroft) 1711, 1265; effect of cations on permeability (Osterhout) 1791, 2257; absorption by soil (Dominicis) 1960; association between, and solvent (Quartaroli) 2017; reactions of, of acids, bases, and salts (Robertson) 2018 (Marshall) 3155; stability of complex anions (Ephraim) 2195; antagonism between anions as affecting barley yields (Lipman) 2281; osmotic pressure in aq. solns. (Bates) 2342; catalysis and (Robertson) 2343; exchange between roots of *Lupinus albus* and culture solns. (True) 2396; migration in ammoniacal solns. of $CuSO_4$ (Reychler) 2616; absorption of, by roots (Johnson)

Digitized by Google

2662; cyanides of W and Mo—valence of central atom in their anions (Rosenheim) 2743; antagonism between, in absorption of salts by plants (Stiles) 2961; mobility of HCO_3' ion at 18° (d'Agostino) 3061; mobility of HCO_3' ion at 37° (Quagliariello) 3062; migration index of, in ammoniacal solns. of $AgNO_3$ (Reychler) 3153; ionization with two complex (Blomberg) 3155; see also *Hydrogen ions; Hydroxyl ions*, etc.

Ions, gaseous, atoms and (Thomson) 1412, 1560, 1710; thermionic emission (Hopwood) 1425; nature of large, in air (Pollock) 1430, 2484; mobility of, in air (Wellisch) 1710; thermionic current (Eve) 1711 (Richardson) 3166; clouds in moist expanded air (Quincke) 1715; (Thompson) 2027; new type in air (Pollock) 2483; mobility of negative, at low pressures (Thomson) 3025.

Ion theory, expt. with (Scriba) 2025.

Ipecac, medication (DeLanney) 123; history of (Prinz) 3328.

Ipecacuanha, alkaloids of (Bridel) 953; (Kenaston) 2969.

Iridio-oxalic acid, rotatory dispersion of K salt (Bruhat) 3220.

Iridium, detg. Au in by-products contg. (Jolly) 186; spark spectrum (Kail) 2481; adsorption of C_2H_2 by colloidal (Paal) 2615.

Iridium chloride, compds. of, with org. bases (Gutbier) 1438.

Iritis, action of atophan and novatophan in (Smith) 1201.

Iron, passivity (Flade) 5 (Smits) 3015; spectrum (Eversheim) 17 (St. John) 1424 (Burns) 1424, 3021 (Lunt) 2366 (King) 3021; electrolytic (Guillet) 23, 2037; southern, ind. (Bowron) 47; Tinplate Ind.—Its Relations with, Ind. (Jones, book) 49; magnetic resistance change of pure (Heising) 173; meteoric (Meunier) 190 (Foote) 579 (Prior) 1290; transverse testing of cast (Hailstone) 193; phys. properties of cast-, bars at diff. temps. (Perrine) 193; elec. resistance and crit. ranges of pure (Burgess) 194; effect of O on pig (Johnson) 194; cast, with unusual structure (Zimmerschied) 194; in tomatoes (Brautlecht) 226; removal from water (Adams) 229 (Oesten) 1955 (Schilling) 2276; soly. of H and N in (Jurisch) 286; pig-Fe low in C (Geissel) 287; magnetic and other properties of electrolytic Fe melted *in vacuo* (Yensen) 287, 906, 1892, 2037; high permeability in (Wilson) 410; developments in cast-, manuf. (Johnson) 430; natural chill of cast (Thrasher) 433; strength figures for cast (Strelin) 434; and C at higher temps. (Ruff) 435; in respiration of sea urchin eggs (Warburg) 487; temp. and tensile tests of (Carpenter) 587; casting (Kern) 589, 1296 (Hall) 3208; pickling gray, castings (Hobbs) 589; hardening (Edwards) 590; relation between Mn and, in respect to vegetation (Pugliese) 641; assimilation of colloidal, by rice (Giles) 682; manuf. by electrolysis (Guillet) 756; sepn. of Al associated with (Minnig) 771; in maturing of pistachio seeds (Ricciardi) 925; handling, at blast furnaces (Johnson) 905; enamels applied dry (Kraze) 957; chilled cast (Tilt) 1025; Cast-, and Steel Pipes (Sharp, book) 1026; detg. formalin in presence of (Lockemann) 1159; ind. in war time (Schrodter) 1163 (Beumer) 1736; effect of temp. on ductility of ingot, wires (Lautz) 1166; -C diagram and critical point $A_{1,2,3}$ (Stead) 1166; Galvanized,: Its Manuf. and Use (Davies, book) 1169; Cementation (Giolitti, book) 1169; in organs in bronzed diabetes (Muir) 1198; retention of, in organs in anemia (Muir) 1199; heat economy in production of (Otto) 1294; chem. and mechanical relations of Co, C and (Arnold) 1295; in cow milk (Nottbohm) 1347; by-product coking ind. and manuf. of (Cooper) 1385; joints in cast, pipe (Miller) 1385; retardation of oxidation of, by bases, $CrCl_3$ and chromates (Rohland) 1454; colloidal, in detg. lactose in milk (Hill) 1514; reduction of, oxides by Pt—magnetic susceptibility of, -bearing Pt (Sosman) 1580; and N (Chiyevskii) 1595; influence of N on mechanical properties of (Chiyevskii) 1595; elasticity of flexure of cast (Ono) 1596; metallic, in coke samples (Campbell) 1685; recovery from flue dust (Baggaley) 1737; relation of, Co and C (Arnold) 1742; reaction with CO (Falcke) 1883; Swedish wrought (Lilienberg) 1893; specifications for malleable (Touceda) 1893; A. B. C. of (Backert, book) 1894; oxidized coating of sheet (Matveev) 1894; plating, with Pb or Al (W.) 1894; magnetic double refraction of (Tieri) 2185; ind. in Europe 2209; bending and torsional strength of cast (Matsumura) 2216; detg. thickness of Zn coating of galvanized, objects (Bauer) 2217; reduced (Zeifle) 2218; C, P and (Stead) 2370; cataclase in meteoric (Meunier) 2366; pole effects in, arc (St. John) 2481; magnetostriction and resistance of (Heaps) 2484; losses in transformer plate (Press) 2487; localization in organs of pigeon (Chevallier) 2551; outlook for (Kemp) 2754; modified Fe-C diagram (Sperry) 2755; 99.84% pure (Anon.) 2758 (See) 3210; spleen as, assimilative organ (Chevallier) 2933; mechanism of action of (Neuschlosz) 2934; bacteria (Harder) 3082; critical points in 3145; ferrous and ferric, in cyaniding (Coghil) 3198; carbonization of, in blast-furnace gases (Byrom) 3201; control of chill in cast (Thrasher) 3201; standard specifications for cast, car wheels 3202; standard specifications for foundry pig 3202; molten Zn as reagent for macroscopic etching of, and steel (Jones) 3207; Fe-C equil. diagram (Ruff) 3209; brittleness of rolled wrought, as consequence of heating (Baumann) 3209; influence of P on mechan. properties of gray cast (Wüst) 3209; action of H_2O on (Isnardi) 3211; influence of different elements upon corrosion

Digitized by Google

of (Wilson) 3212; carbonizing, or steel (Ford) 3215; absorption of, from organs after hemolysis (Muir) 3289. *Patents:* Electrodeposition of (Soc. "Le Fer") 30 (Cowper-Coles) 759; plating, with Cu, brass, etc. (Monnot) 49; annealing and oxidizing, sheets (Carnahan) 50; hot-rolling, rods (Frasch) 51; protecting, during rolling (Frasch) 52; malleable (Pictet) 53 (Harbeck) 1722; colloidal soln. of (Crookes) 129; Zn from Fe″ solns. (Buddeus) 287; hardening (Sweet) 288 (Vickers, Ltd.) 290 (McLarty) 1297 (Brown) 1743; removing gases from (Gostling) 289; art., waters (Sauer) 498; coating (Kirby) 592; recovering, from enameled articles (Back) 592; steel-like product (Billings Process Co.) 593; cast (Keller) 760 (Johnson) 1171 (Albert) 1744; removing, from water (Kannenberg) 945, 1647 (Latzel & Kutscha) 1360 (Vollmer) 3315; extg., from alloys or mixts. (Spitz) 1027; sol. product contg., for addition to foods and beverages and use as medicine (Marsh) 1081; combining, with sucrose (Marsh) 1082; carburizing (Staff) 1170, (Eveland) 1296; equalizing mol. stresses (Heinze) 1170; prepg. for malleableizable castings (Kranz) 1170; protective coating on (Richards) 1171 (Mark) 3214; impregnating, surfaces (Simpson) 1172; preserving (McLarty) 1229; removing, from clay (Thompson) 1234; silvering (Bévenot) 1280; furnace for melting (Rice) 1296; ingot (Intern. Metal Products Co.) 1298 (Carnahan) 1456; strengthening pig (Johnson) 1298; melting, in foundries (Klug) 1455; working (Carnahan) 1456, 1457; treating Cu sulfide ore contg. (Hybinette) 1721; galvanizing (Gibson) 1743; increasing malleability, ductility and strength of (Dismore) 1880; bluing, sheets (Carnahan) 1895; oxidizing, sheets (Maskrey) (Carnahan) 1895; pure (Intern. Metal Products Co.) 1896; uniform heating of, used in glass (Wagner) 1984; gas economy in, works (Rummel) 1990; coating, with Zn (Skemp) 2218; coating with Pb (Beneker) 2219, 2220 (Samuel) 2870; enamels (Ver. Chem. Fab., etc.) 2301 (Baezner) 3343; dephosphorizing pig (Pasquier) 2375; removing piping in cast (Schruff) 2377; handling Fe booms (Witkowitzer, etc.) 2378; annealing malleable, castings (Fryer) 2638; removing O from cast (Johnson) 2638; mixing flue dust with molten (Baggaley) 2726; welding cast- (Werner) 2760; rendering, non-oxidizable (Aller) 3214; sheets coated with Cu (Monnot) 3214; rust-proof black finish on (Atuesta) 3216; attaching rubber to (Moench) 3379; see also *Annealing; Corrosion; Galvanisation; Ingots; Water, purification of; Pipes; Welding.*

Iron, analysis, N in steel (Barton) 39; in Fe ores (Fresenius) 39; rapid methods in steel works labs. (Nesbitt) 185; C in (Szasz) 185 (Adams) 1019; As in (Balla) 277 (Kleine) 1588; "analoid" detn. of Mn 278; detn. in H_2SO_4 (Nissenson) 278; in oleum jecoris aselli ferratum (Carlson) 352; gravimetric (Vásárhely) 572; detn. of C and O in steel (Johnson) 754; pptg. phosphomolybdate (Mains) 768; sepn. of Mn and Fe group (Pelt) 768; reduction of $Fe_2(SO_4)_3$ (Cappa) 770; estn. in pyrophoric alloys (Bellucci) 771; electrometric titration with dichromate (Ziegel) 898; Cu in steel (Brown) 899; with $K_2Cr_2O_7$ and diphenylcarbohydrazide (Brandt) 899; P in 1019; in basic Bessemer slag (Blum) 1157; Cr and V in steel (Rich) 1286; in water (Zink) 1357; colorimetric (Chugaev) 1442 (Groschuff) 3151; B in (Lindgren) 1588; As in residue from soln. of Fe and steel (Brandt) 1589; Cr in (Tusker) 1589; reduction of Fe solns. nace (Keeney) 754; system: Fe–Mn (Rumelin) 1166; structure and hysteresis loss in medium-C steel (Langenberg) 1167; thermo-e. m. f. of (Fuller) 1426; elec. furnace melting of (Wile) 1719, 2623; effect of B on properties (Yensen) 1892; cast Fe contg. P (Carnevali) 2375; diffusion of C in (Adams) 2755; (Charpy) 2757; passivity in (Mosley) 2833; magnetic transformations in (Rumelin) 3209; "near-eutectic" temp. of (Ruff) 3209. *Patents:* For high temps. (Pascal) 53; for dynamos (Rübel) 53, 1026, 1027; Fe-Al-Mg or -Ca (Rübel) 290; with Ni and Co (Borchers) 290; treating, contg. Si, Al and Mn to reduce elec. and magnetic loss (Hadfield) 437; for shafting, armor plate, etc. (Churchward) 438; rolled sheets (Gleason) 592; with Si and Cr (Grohmann & Co.) 596; with Ni (Hyde) 1171 (Borchers) 2639; Al-Fe-Ti (Goldschmidt) 1456; (Speer) 1601; contg. Ta (Siemens) 2377; anti-corrosive (Talbot) 2760; see also *Steel*.

Iron arsenate (Jezek) 571.

Iron cacodylate (Barbano) 2690.

Iron calcium lactophosphate, prep. of sirup of (Barbano) 1662.

Iron carbides, catalytic action on decompn. of CO (Hilpert) 2847.

Iron chlorides, compd. of $FeCl_3$ and NO (Bellucci) 897; $FeCl_3$ leaching of Cu ores (Flynn) 1729; estg. oxychloride (Romijn) 1971, 2285; $FeCl_3$ gelatin (Bourget) 2127; compd. of $FeCl_3$ with bisdimethylchromone (Simonis) 3251.

Iron citrochloride, assay of tincture ferric (E'We) 513.

Iron compounds, action of Mg salts on org. (Quartaroli) 31; structure changes in, at higher temps. (Honda) 173; oxidation of, in solns. contg. humus (Maekinen) 231 (book) 1963; of pyrogallol (Weinland) 305; inorg., in chloroplasts of green cells of plants (Moore) 474; in soil (Masoni) 1816; of phenols (eugenol and vanillin) (Weinland) 2083; contact action of water vapor and C in oxidation of ferrous compds. (Doroshevskii) 2177; removing, from sugar solns. (Horne) P 2722.

Iron cyanide (Lamb) P 696.

Iron deposits, in France, 190 (Nicou) 1448; Bulacan (Eddingfield) (Dalburg) 282; Mayari, Cuba (Kemp) 903, 2366; of Lake Superior (Crowell, Murray, book) 1736; in Cape Breton (Lindeman) 1890; of igneous origin in Greece (Ktenas) 2047; of Suhl (Russwurm) 2047; structure of Cuyuna district of Minn. (Cheney) 2209; bog (Dake) 2366; geology of deposits, Daiquiri, Cuba (Kemp) 2752; manganiferous, of Cuyuna range (McCarty) 2755; near Nome, Alaska (Eakin) 2861; of Daiquiri, Cuba (Lindgren) 3195; (Burchard) 3195; Wabana, of Newfoundland (Hayes) 3195; in Texas (Burchard) 3195.

Iron fluoride and production of malleable Fe (Harbeck) P 1722.

Iron hydroxides, action of $Fe(OH)_3$ on $Mg(OH)_2$ (Quartaroli) 32; adsorptive power (Rohland) 546; negative colloidal $Fe(OH)_3$ (Powis) 2475.

Ironing, textiles (MacKenzie) P 155; prepg. for textile inds. (Micksch) 1996.

Iron nitrides (Moldenhauer) 416.

Iron ores, agglomerating (G. Polysius, etc.) P 54; cement (Williams) 138; their Occurrence, Valuation and Control (Eckel, book) 284; ind. of Brazil (Harder) 426; supplies of seaboard furnaces (Eckel) 585; nodulizing (Borch) P 590, production, 1913 (Burchard) 905; prepg. for blast furnace (Collard) P 1027; H from, and steam (Dicke) P 1099; formation and distribution (Dake) 1733; production in 1914 (Diller) 2209; origin of lateritic (Leith) 2366; detg. Mn in (Fleckinger) 2630; Ti oxide from (Farup) P 3215; V in (Blum) 1165.

Iron oxides, estg. $C_{10}H_8$ in spent (Davis) 707; hydrous Fe_2O_3 (Bancroft) 1437; reduction by Pt (Sosman) 1580; preventing Fe_2O_3 deposits in regenerators (Maccallum) P 1744; oxidation of alcs. in presence of FeO (Doroshevskii) 1865; electrode of molten (Laszczynski) P 1880; reaction between FeO and C (Falcke) 1883; thermal e. m. f. of Fe_3O_4 (Brown) 2182; spent, residues 2304; in gas purification (Meyers) 2583; ignition of Fe_2O_3 in detg. Fe (Selch) 3187.

Iron phosphate compounds, clouding of wines through (Weil) 1821.

Iron preparations, ferrated cod liver oil (Carlson) 352; pharmacol. effect of (Trebing) 658; in anemia (Chistoni) 1939; (Hoffmann-La Roche) P 2424.

Iron salts, complex (Spacu) 180; NO and (Bellucci) 418; electrolytic Cu from solns. contg. (Hybinette) P 562; light sensitiveness of ferric (Winther) 748; of aromatic hydroxycarbocylic acids (Claass) P 1370; of therapeutic value (Heinemann) P 1669; purifying $ZnCl_2$ solns. contg. (Lawton) P 1671; oxidation of alcs. in presence of ferrous (Doroshevskii) 1865; slowness of hydrolysis of Fe''' salts (Quartaroli) 2016; effect on clover seedlings (Ruprecht) 2122; of uni- and polyvalent non-substituted org. acids (Weinland) 2360; ferric salts and org. acids and light (Scoville) 2967; "double complexes" in ionization of (Blomberg) 3153; reduction of, solns. and titration with $KMnO_4$ (Hoenig) 3187; see also *Drugs*.

Iron silicates, system $MnSiO_3$–$FeSiO_3$ (Kallenberg) 276.

Iron silicofluoride and production of malleable Fe (Harbeck) P 1722.

"Iron-stone," analysis of (Vickery) 2498.

Iron sulfates, reduction of $Fe_2(SO_4)_3$ by Cd amalgams (Capps) 770; pyrophoric deposits by electrolysis of $FeSO_4$, $MgCl_2$ and glycerol

Digitized by Google

(Kremann) 1152; acceleration of reduction of $FeSO_4$-Ag salts by acids (Lüppo-Cramer) 1722; $FeSO_4$ for detg. V in steel (Dougherty) 1727; titration of nitrates with $FeSO_4$ (Bowman) 2747; reaction between $FeSO_4$ and $K_2Cr_2O_7$ (Neidle) 2826.

Iron sulfide, crystn. of (Merwin) 42; as pigment (Bayerische, etc.) P 966.

Iron thiocyanate, characterization of HCN in toxicology by $Fe(CNO)_3$ test (Lavialle) 2631.

Irreversible phenomena (Marcellin) 400.

Irrigation, effect on corn (Harris) 502; in Western Oregon (Powers) 683; in California (Bryan) 1592, 2785.

Irritation, effect on permeability of meninges for salvarsan (Stillmann) 2941.

Isatanthrene (Schirmacher) P 720.

Isatin and its derivs. (Borsche) 309; oxidation product (Farbw.) P 966; (Stollé) (Farbw.) P 1999; (Binz) 2533.

Isatoxime (Borsche) 309.

Isoacetoevernone (Hoesch) 2541.

Iso[acylglycocoll esters], alkylated (Schmidt) 83.

Isoamarine and salts and derivs. (Snape) 612; rotatory powers of *d*- and *l*-, and their tartrates (Snape) 2892.

Isoamylamine, condensation of BzH and (Ishizaka) 77.

Isoamylaminoazobenzenesulfonic acid (Karrer) 3240.

Isoamyldibenzylamine and -HCl (Ishizaka) 77.

Isoamyldibenzylammonium iodide and corresponding base (Ishizaka) 77.

2 - Isoamyloxy - 4 - methyl - 5 - chlorobenzoic acid and Me ester (v. Walther) 2642.

Isoamyl-*p*-phenylenediamine and di-HCl (Karrer) 3240.

Isoamylsulfophosphazoisoamylamine (Michaelis) 1032.

Isobebeerine, ethiodide (Schlotz) 2080.

Isobenzal-α-acetonaphthone and di-Br deriv. (Albrecht) 912.

Isoborneol, *p*-nitrobenzoate (Henderson) 611.

Isobutane, vapor pressures of liquid (Burrell) 3152.

Isobutyl alcohol, surface tension (Richards) 2025.

Isobutylamine-*N*-phosphinic acid, Et and Ph esters (Michaelis) 1031.

Isobutyldiisoamylcyclohexylmethane (Halse) 3233.

Isobutylenecyanoacetic acid, Et ester (Scheiber) 1183.

Isobutylglyoxal and acetal (Dakin) 202.

2 - Isobutyloxy - 4 - methyl - 5 - chlorobenzoic acid and Me ester (v. Walther) 2642.

Isobutyloxyphosphazoisobutylamine (Michaelis) 1031.

Isobutylsulfophosphazoisobutylamine (Michaelis) 1032.

1 - [Isobutyrethoxyamino] - 5,5 - dimethylhydantoin (Bailey) 2530.

1 - [Isobutyric - acid]amino - 5 - dimethylhydantoin and derivs. (Bailey) 2530.

***p*-Isobutyroanisole** (v. Auwers) 1460.

***o*-Isobutyro-*p*-cresol** and Me ether (v. Auwers) 1460.

Isobutyrylmethylamide (Franchimont) 294.

Isocantharidic acid (Danckwortt) 2085.

Isocantharidin (Danckwortt) 2085.

Isocarbostyril, derivs. (Bain) 200.

Isocarvonecamphor and derivs. (Serasgiotto) 797.

Isocostene (Semmler) 211.

Isocoumarin, derivs. (Bain) 200.

Isocurcumin (Heller) 320.

Isocusparine and salts (Troeger) 2079.

Isocyanic acid, *o*-cyanophenyl ester (Borsche) 309.

Isocyanins, Ueber einige neue Isocyanine und deren Einwirkung auf Bromsilbergelatine (Bing, book) 2841.

Isocymarigenin (Windaus) 2379.

Isodibenzoylglucoxylose and penta-acetate (Tutin) 1034.

Isodicitronella oxide (Spornitz) 78.

Isodihydrodesoxycinchonine and Pt salt (Freund) 459.

α,β - Isodiphenylchloroacetylaminoethanol and deriv. (Jacobs) 2076.

Isoelectric point, of CO-hemoglobin and of reduced hemoglobin (Michaelis) 466.

Isoerucic acid, isomerism of (Mascarelli) 1761.

Isogonism (Panebianco) 2830.

Isohexacosane (Levene) 1610.

Isohexylethenyltricarboxylic acid and Et ester (Longinov) 3053.

Isohexyl iodide (Longinov) 3053.

Isohexylsuccinic acid (Longinov) 3053.

β-Isohexyltetramethylene glycol and oxide (Longinov) 3053.

Isomelamine and acetate (Krall) 611.

Isomeric change, dynamics of (Dawson) 2730.

Isomeric compounds, mol. consts. of (Pochettino) 548.

Isomerism, keto-enol tautomerism (Leuchs) 82; of oximes (Brady) 197, 205, 603; desmotropic formyldesoxybenzoins and O_2 (Scheiber) 301; of the hydrojuglones (Willstätter) 308; stereo-, and carcinoma (Freund) 481; geometrical, in hydantoin series (Johnson) 597; stereo-, and the electronic theory (Pauly) 598; transformation of NH_4MeSO_4, etc. (Werner) 607; tautomerism, desmotropy and dynamic (Lowry) 613; conversion of a *d*- into a *l*-compd. by exchange of groups (Fischer) 801; desmotropy of derivs. of coumaranone and AcBz (v. Auwers) 806; stereo-, of benzalhydantoin (Johnson) 909; tautomerism of phenylpyruvic acid (Bougault) 1039; of the helianthines and aminoazo- (Hantzsch) 1177; in the thiabe- (Wallach) 1457; of pyrrole-

Digitized by Google

metallic compds. (Chelintzev) 1472; stereo-, of *sym*-diethyldiphenylethane (Lyepin) 1472; configuration of stereoisomeric stilbenes, etc. (Stoermer) 1756; stereoisomeric α-phenyl-*o*-nitrocinnamic acids, etc. (Stoermer) 1756; stereoisomeric α-substituted cinnamic acids (Stoermer) 1757; of erucic, etc., acids (Mascarelli) 1761; of α-sulfopropionic acid (Franchimont) 1768; of acetates of sugars (Hudson) 1770–1; transformations of cyclic α-chloroketones (Favorskii) 1900; distinguishing tautomeric, isomeric, and polymeric from polymorphic substances (Sidgwick) 2062; tautomerism of acetanilide (Valyashko) 2071; of cusparine (Troeger) 2079; conversion of galactose pentaacetate into an isomer (Hudson) 2092; a third galactose pentaacetate (Hudson) 2093; configuration of the stereoisomeric diphenylsuccinic acids (Wren) 2223; chromoisomeric salts of phenol and enol derivs. (Hantzsch) 2243; chromo-, as phenol-enol isomerism (Hantzsch) 2252; isomerization of cyclic compounds (Rozanov) 2507; resolution of *p*-toluenesulfonylalanine (Gibson) 2517; differences in reaction of stereoisomeric ethylene halides (Pfeiffer) 2534; desmotropism of derivs. of succinylosuccinic ester (Kauffmann) 2651; of merotropic and desmotropic compds. — -formylphenylacetic ester (Michael) 55; of spiranes (Leuchs) 84; chromoisomerism of phenolaldehyde salts and acridonium salts (Hantzsch) 3234; ketoenol, of cyanoacetic acid and derivs. (Dawson) 2730; see also *Optical rotation; Racemism.*

Isomerization of carvone (Sernagiotto) 797; of cyclic compds. (Kizhner) 2896; of higher acids $C_nH_{2n}-_2O_2$ (Egorov) 1897.

Isomorphism, between perchlorates and permanganates (Scagliarini) 896, 1285.

Isomorphous substances, inoculating action of (Hasselblatt) 541.

Iso-β-naphthol, sulfide (Hinsberg) 209; sulfide and quinhydrone deriv. (Hinsberg) 2064; sulfone and derivs. (Hinsberg) 2065.

Iso-β-naphtholsulfonium anhydride and derivs. (Hinsberg) 2064.

Isonicotoine (Noga) 1769.

Isonitriles, Pt compds. of, contg. CN radical (Chugaev) 87.

Isonitrosobromoacetophenone (Cambi) 452.

Isonitrosocamphor, transformation into cyanolauronyl chloride, etc. (Borsche) 1058.

Isonitroso-α-hydrindone (Steinkopf) 314.

Isonitroso-3-methyl-α-hydrindone (Steinkopf) 314.

Isonitrosopentazidoacetic acid and derivs. (Lifschitz) 1614.

Iso-oleic acid of ivy seeds (Palazzo) 1476.

Isopeonol (Hoesch) 2541.

Isopicramic acid, alkylated (Meldola) 196.

Isoprene (Ostromislenskii) P 396, 2328; compd. with SO_2 (de Bruin) 623; (Heinemann) P 1136; com. prep. (Chardet) 2007; (Badische) P 2164; (Euler-Chelpin) P 2328; caoutchouc from (Heinemann) P 2467 (Harries) 2996.

Isopropylbutylcarbinol and pinacol (Wallach) 1458.

Isopropyl butyl ketone and derivs. (Wallach) 1458.

1-Isopropylcyclohexane-3,5-diol and dibenzoate (Crossley) 2225.

1-Isopropylcyclohexan-3-ol and *o*-nitrobenzoate (Crossley) 613.

1-Isopropylcyclohexan-3-one and semicarbazone, etc. (Crossley) 613, 1467.

1-Isopropylcyclohexanyl, 3-benzoate (Crossley) 1467.

***N*-Isopropyl-2,5-dimethylpyrrole-3,4-dicarboxylic acid** and di-Et ester (Plancher) 1478.

Isopropylglyoxal and acetal (Dakin) 202.

Isopropylidenecyanoacetic acid, Me ester (Scheiber) 1183.

Isopropylideneglycerol methyl ether (Irvine) 1469.

Isopropylidenemalonic acid, addition of diacylmethanes to ester (Scheiber) 1181.

Isopropylmalonaminic acid, conversion of *d*- into *l*- (Fischer) 801.

2-Isopropyloxy-4-methyl-5-chlorobenzoic acid and Me ester (v. Walther) 2642.

Isoquercetone and derivs. (Nierenstein) 2885–6.

Isoquinaldinic nitrile (Zincke) 1463.

Isoquinoline in coal tar (Weissgerber) 801.

Isoquinoline derivatives (Pyman) 1310.

Isoquinoline series, ketones of (Kaufmann) P 2427.

Isoquinolinium hexachloroplumbate (Gutbier) 1014.

Isosaccharic acid, configuration (Levene) 2078.

Isoserine, AcH from (Neuberg) 58.

Isostasy and radioactivity (Becker) 752, 1593.

Isostrychnine, pharmacodynamic action (Wiki) 660.

Isothebaine and salts (Klee) 299.

Isothebainemethine methyl ether and dimethylsulfate and *l*-ditartrate, etc. (Klee) 300.

Isotherms of diatomic gases and their binary mixts. (Onnes) (Crommelin) 988.

***m*-Isothiocyanoazoxybenzene** (Fichter) 2543.

Isothujylamine(?) and derivs. (Wallach) 1457.

Isotopes, phys. properties (Lindemann) 1148.

Isotopy, isotopic elements (Hevesy) 175, 1271, 2485 (Fajans) 1149.

Isotriacontane (Levene) 1610.

Isovaleric acid, cocaine salt (Overlach) P 236.

Isovaline (Gadamer) 622.

Itaconic acid, influence of light on polymerization of Et ester (Stobbe) 209.

Ittnerite (Thugutt) 578.

Ivy, iso-oleic acid of seeds (Palazzo) 1476.

Jack fruit, compn. of Hawaiian (Thompson) 3104.

3013; new relations between thermodynamics and, of sp. heats (Pagliani) 3016.
Kipp generator, modified (Cohen) 537.
Kirchhoff's equation, for latent heat of diln. (Porter) 2180.
Kirchhoff's law, demonstrating, of absorption (Tumlirz) 873.
Kjeldahl apparatus (Holmes) 1, 2470; flask for detg. soil N (Noyes) 498; (Bennett) 733; (Pickel) 2725; micro- (Morse) 3081.
Kjeldahl-Folin-Farmer method (Harding) 1926.
Kjeldahl-Gunning-Arnold method (Jensen) 279; (Pickel) 1286.
Kjeldahl method, destruction of org. material (Carpiaux) 40; detg. N in $CaCN_2$ in presence of nitrates by (Segawa) 1085; (Nolte) 2205; for leather (Hough) 2994; in digestion of coal and coke (Margosches) 3122; see also *Nitrogen, analysis*.
Kleol, 954.
Klinoplast, 954.
Klippfisch (Buttenberg) 2949.
Knecht process for detg. fastness of dyes (Sirker) 3364.
Knife in machines for working fibrous materials (Hinrichsen) P 1243.
Knight-Christensen process (Spaulding) 1165.
Kodan, 955.
Koepsal permeator (Burrows) 2.
Kola prepg., for food (Zimmermann) P 1813 (Spengler) P 2408.
Kolbe reaction (Fichter) 294.
"Kontraluesin-Döhring," action and resorption of, 3295.
Koprosterol. See *Coprosterol*.
Korarima cardamom oil (Schimmel & Co.) 2692.
Korrelatin-Poehl, 954.
Kubierschky system of tar distn. (Borrmann) 1684.
Kukui oil, 387.
Kuromoji oil, constituents (Shinohara) 2286.
Kyanite (Kittl) 42.
Kymograph tracings (Fawcett) 3283.
Kynurenic acid and tryptophan (Homer) 3272.
Kyrine, fraction obtained on partial hydrolysis of protein (Levene) 3074.

Labels, paraffining (Randall) 2167.
Laboratory, fume hood (Coleman) P 3; steel works, 46; chem., of the Imperial College of Science, 1831; stool (Deming) 2470; history of, heat supply (Kistner) 2609.
Labradorite (Grosspietsch) 3193.
Lac, filtration (Freymuth) P 388; from paracoumarone and paraindene (Lender) P 1127; Lack und Firnis-Fabrik (Andes, Erwin, book) 2000; Die Fabrikation der Lacke, Firnisse, u. s. w. (Andres, book) 2988; Handbuch der Lackund Firnis-Industrie (Seeligmann, Zicke, book) 2988.
Laccase, alfalfa (Bunzel) 1629.
Laccolith, elaeolite syenite (Kaiser) 2634.
Lace coating, with metal (Rafn) P 155; on dress goods (Bamberger) P 1124.
Lacerations, internal, in large steel ingots (Giolitti) 2757.
Lacquer on metal vessels (Wicküler-Küpper-Brauerei A. G.) P 1849; chemically resistant glass (Fox) 971; colorless, for metal parts (Mar) 2459; resistance to alkalies (Bottler) 2600; lacquered Sn plate (Miyazaki) P 2601; solvent for removing (Schwimmer) P 2819; prepn. of casein-cresol spirit (Kühl) 2987.
Lacroixite, ternary fluophosphates of (Slavik) 1160.
Lactacidogen, isolation (Embden) 929; decomp. of, by press-juice of organs (Embden) 929.
Lactalbumin, products of hydrolysis of (Osborne) 3073.
Lactarius scrobiculatus, chemistry of (Zellner) 3083.
Lactase, adaptations (Bompiani) 2390.
Lactation, intramuscular injection of pituitary ext. and (Hill) 478 (Simpson) (Schäfer) 2104; fatty acid infiltration of liver during (Coope) 1073; milk secretion of cows having prolonged period of (Goldomi) 2675; relation of I values of mesenteric and kidney fatty acids to those of liver fatty acids in lactating rabbits (Cooper) 2932; hepatic fatty infiltration in early (Mottram) 3088; see also *Milk; Sécretion*.
Lactescence (Tobler) 1629.
Lactic acid (Saxe) P 111; Ca salt of, in treatment of dermatoses (White) 224; electrodeposition of Pb from Pb salt of (Mathers) 267; and fermentation of sugar (Neuberg) 472; in lactic fermentation of cheese (Samarani) 671; production of yeast for beet mash according to, process (Lange) 690; fermentation (Pollak) P 691; in brewing (Berry) P 691 (Wahl) 2123; in wines (Mensio) 839; formation during alc. fermentation (Oppenheimer) 924; formation in muscles (Embden) (Cohn) (Laquer) 928; in saké (Ando) 1088; in urine and blood after asphyxia (Ishikawa) 1349; production by acetic bacteria (Osterwalder) 1493; and carbohydrate metabolism (Fürth) 1801; germicidal effect in milk (Heinemann) 2101; from distillery slop (Laszloffy) P 2563; manuf. (Hoffmann) 2607 (Landau) P 3330; preservation of potato-slop by pure culture (Völtz) 2686; bread improvement by (Wahl) 2952; course of natural formation (Neuberg) 3077; stimulating action of Mg salts on, fermentation (Richet) 3077; polarization (Gore) 3105; in body following injury to protoplasm (Dunn) 3290.
Lactic acid, analysis (Balderston) 534, 1702; (Faust) 977; in organ exts. (Meissner) 1188; in wine (Gasparini) 1655; detection in leather and tanning liquors (Lauffmann) 1702; in urine (Schneyer) 2918; in presence of pyruvic acid (Czapski) 3081.

Lactic acid ferment. See *Bacillus, acidi lactici.*

Lactometer, Quévenne, and calculated solids (Isnard) 826.

Lactones, dilactone $Se(C_6H_4CO.O)_2$ (*Lesser*) 80; and detns. of chem. consts. of fatty acids (Browne) 389; $C_7H_{10}O_3$ (Kötz) 622; of *d*-mannonic, etc. acids (Hedenburg) 908.

Lactose and metabolism of infants (Talbot) 96; *B. delbrückii* in nutrient solns. contg. (Palm) 473; adaptation of *Sterigmatocystis nigra* to (Coupin) 640; diastatic substance from (Panzer) 918; estn. in condensed milk (Revis) (Wagenaar) 941; $NaHCO_3$ and excretion of intravenously injected (Goldberg) 1203; detg. (Hatta) 1342; colloidal Fe in detg., in milk (Hill) 1514; -peptone media for bacteriol. exam. of water (Chamot) 2678–9; com. (England) 2969; Rubner's test for (Rogerson) 3078; milk sugar in judging milk (Gabathuler) 3106.

Lactose octaacetates (Hudson) 1770.

Lactosuria (Farges) 3267; (Rosenbloom) 3278.

Ladenburg method for synthesis of pyridine homologs (Chichibabin) 3057.

Lakes, Analysis of Dyestuffs and their Identification in Lake-Pigments, etc. (Green, book) 2986. *Patents:* (Bayer & Co.) 156; recovering (Schweingel) 385; red alumina color (Tust) 723; violet alumina color (Themaschewski) 723; color (Bayer & Co.) (Hagen) 2153; chrome-contg. color (Badische) 2458; (Griesheim. Elek.) 3133; formation (Gessler) 3367.

Lakmobalsam, 954.

Lamellar substances, transmission of X-rays through (Nishikawa) 888.

Laminariose (Kylin) 2923.

Lampblack, substitute for (Blardone) P 3334.

Lamps, explosion of kerosene, 1117; see also *Lighting.*

Lampyridae, photogenic processes in (McDermott) 938; photogenic substance in firefly (Harvey) 938.

Landau's test for syphilis (Klomer) 1795, 2100 (Stillans) 2100.

Lanthanum spectrum (Paulson) 751; morphotropic relations of Et sulfates of, and other rare elements (Jaeger) 990.

Lapachol, microchem. detection of (Tunmann) 1660.

Lapachonone and picrate (Matthes) 1661.

Lapacic acid derivs. (Monti) 3219.

Lard (Zahner) P 672; rendering (Burkle) P 673; detecting tallow in (Prescher) 2677.

Lard substitutes (Chisholm) P 110; (Burchenal) P 1516.

Larkspur, insecticidal value of fluid ext. of, seed (Williams) 692; anthocyan of (Willstätter) 1304.

Latent image. See *Photography.*

Laterites, alteration products of (Lacroix) 284; concretionary ore formation on (Lang) 584; of Mozambique (Holmes) 584; recognition of lateritic soil (Bernardini) 1292; lateritic and non-lateritic weathering (Lang) 1890; of French Guinea (Fermor) 2051; origin of lateritic Fe ores (Leith) 2366.

Laterization in Italian soils (Dominicis) 680.

Latex. See *Caoutchouc; Rubber.*

Lathering numbers (Steffan) 2321.

Laudanum, absence of morphine from liver in chronic, addiction (Rosenbloom) 1941.

Lauric acid, gelatinization of K salt of (Kurzmann) 867.

Lava of Ambryn (Lacroix) 190; of Hawaii (Cross) 1292; "bread-crust-bomb" from Santorin (Kichler) 1448.

Lavage in PhOH poisoning (Macht) 1508.

Lavender oil (Schimmel & Co.) 2692.

Lavoisier in history of science (Guareschi) 2169.

Law, chem. and biochem. (Arrhenius) 918; of Tate (Morgan) 1563; deviation from gas, in aq. solns. of salts and f. p. and b. p. (Sluiter) 2020; N. Dakota paint and oil, 2316; of Bunsen and Roscoe (Gil) 2338; distribution (Georgievics) 2340; Faraday's, for flame conduction (Thieme) 2347; energy, of photochem. processes (Warburg) 3149; Weber's, and antagonistic salt action (Loeb) 3252; see also *Chemical industry; Patents,* etc.

Lawsonite (Rogers) 577.

Layers, thickness of very thin, on surface of water (Marcelin) 8; Volta effect and monomol. (Guyot) 13; stalagmometric studies of solns. of colloids and crystalloids—diffusion in surface (Berceller) 2902.

Laxative, Dr. Caldwell's herb, compd. (Puckner) 2129; (Wiechowski) P 2426.

Leaching, lab. app. for (Balderston) 251; (Nagel) 539; Zn-lime ore with acids (Ralston) 1023; HNO_3 for, ores (Bueler-de-Florin) 1164; ores (Keep) 1164 (McCaskell) P 1584 (MacDonald) P 1601 (Fleming) (Godbe) (Hoffman) P 2638; Cu ore (Ricketts) 1450 (Austin) 2503; -plant operation (Crossdale) 1451; plants (Mathewson) 1452; of Zn salts and effects of improper drainage in wood preservation (Angier) 2138; seaweed (Norsk Tangsyndikat) P 2296; concentrator slimes tailings (Addicks) 2635; of K salts (Fürer) 3332.

Lead, -melting furnace (Monometer Mfg. Co.) 46; refraction of Röntgen light on, edge (Laub) 174, 552; drier for, products (Macklind) 236; and end product of Th (Holmes) 266, 1874; impurities in Pb storage battery electrolyte (Weightman) 268; allotropism of (Cohen) 403 (Heller) 2339 (Creighton) 2614; sp. heat (Keesom) 405; Ra D and (Hevesy) 410; in 1913, 431; action of water on (Delepine) 675 (Isnardi) 3211; elec. properties of, at low temps. (Onnes) 879; d. of, from Ceylon thorite (Soddy) 889; compressibility (Richards) 983; at. wt. of—analysis of $PbBr_2$ and $PbCl_2$ (Baxter) 984, 1412; tetravalent (Gutbier) 1014; ind. (Siebenthal) 1024; at. wt. of U Pb (Hönigschmid)

1148; spectra of ordinary, and, of radioactive origin (Merton) 1148; corrosion (Lambert) 1167; elimination from water (Drost) 1207; electrodeposition (Mathers) 1275; wool joints (Reinicker) 1385; destruction of cable by white ants 1407; equil. in system S–O–Pb (Reinders) 1564; clouds in $PbCl_2$ (Lorenz) 1565; action of water (Jorissen) 1597; in agriculture (Cutolo) 1654; insectides contg. (Sonntag) 1819; seals for leading-in wires (Sand) 1861; absorption in, of γ-rays (Richardson) 1875; plating Fe with (W.) 1894; treatment of waste waters from, mines (Kershaw) 1957; in ceramic inds. (Berger) 1982; local action (McJunkin) 2108; production in U. S. in 1914 (Siebenthal) 2210; prohibition of, paints in Gt. Britain 2317; physico-chem. study (Cohen) 2338; anodic soln. (Bell) 2351; neuritis (Sante) 2403; prep. and operation of, plating baths (Mathers) 2739; elec. resistance of, wires (Henning) 3148; effect on germ cells (Cole) 3303; -dissolving power of water in drinking water conduits of Enschede (Rodenberg) 3312. *Patents:* Oxidizing (Holley) 157; extg., from living human body (Clague) 640; making, wire (Eyton) 1559; coating Fe with (Beneker) 2219, 2220 (Samuel) 2870; slag (Doanides) 2222; condenser (Johannson) 2376; finely divided, for making pigments (Holley) 3369.

Lead, analysis (Milbauer) 39; in urine (Parkinson) 214; in Bi preps. (Enz) 236; sepn. from Sn and Sb (McCay) 277; in tap water (Pick) 493; estn. in solders, tinned goods and tinning baths (Bretau) 772; Nachweis, Bestimmung und Trennung der chemischen Elemente (Rüdisüle, book) 1159; in art mineral waters (Reese) 1517; electrolytic, of alloys of (Compagno) 1589; toxicological (Meillère) 1590; limit tests for (Tocher) 1664; detg. As in (Brandt) 2203; detn. as sulfite (Jamieson) 2629; (Miles) 2854.

Lead, metallurgy of St. Joseph Lead Co.'s plant 192; of S and O ores (Borchers) P 271; in 1914 (Pulsifer) 284; (Deut. Felsen Oel, etc.) P 289; extn. from Zn oxides (Tenenbaum) P 594; extg. from alloys or mixts. (Spitz) P 1027; (Rudolph) P 1434; (Hills) P 1744; mining and milling of, ores (Wright) 2210; (Langguth) P 2219; (Johnson) P 2376; (Kilbourn) P 2504; high-lime slags in (Bretherton) 2865; smelting and refining (Hofman) 2865; smelting at El Paso (Easter) 2868; Newnam hearth (Newnam) 3048; elec. smelting (Johnson) 3171; (Borchers) 3197; sepg. Pb from Zn in sulfide ores (Bechi) P 3215; sepn. of, and Sb (Hesse) 595.

Lead acetates, Pb subacetate for decolorizing diabetic urine (Beckers) 215; electrodeposition of Pb from $Pb(OAc)_2$ (Mathers) 267; assaying solns. of Pb subacetate (E'We) 513; $Pb(OAc)_2$ test for H_2S in gas (McBride) 520; $Pb(OAc)_2$ and basic Pb acetate (Westdeutsche Bleifarbenwerke, etc.) P 1551; $Pb(OAc)_2$ in Ag extn. (Morris) 2582, 2865; $Pb(OAc)_2$ method for assay of cyanide solns. 3042; action of normal and basic, on sugars (Rogerson) 3078.

Lead alloys with Zn and Ag (Bogitch) 432; for piston rod packing rings (Holder) P 781; Untersuchungen über Lagermetalle, Antimon-Blei-Zinn-Legierungen (Heyn, Bauer, book) 906; with Ni and Cu (Parravano) 1025; Cu-Zn-Pb (Parravano) 1453; with Th (Rolla) 2369; with Sn and Sb (Bauer) 3203.

Lead ammonoacetate (Franklin) 3037.

Lead arsenate, apples sprayed with (Woods) 503; valuation of com. (Robinson) 1963; (Barstow) P 1977; (Robinson) 3321.

Lead bromide, analysis of (Baxter) 984, 1412.

Lead carbonate, white lead manuf. (Euston) P 158 (Ramage) P 387 (Evans) 968 (Euston) P 972 (Kessler) P 1126 (Ellis) P 2000, 2318; white lead works 1848; white lead in oil 1848; mixer for making white lead (Barton) P 2819.

Lead chamber process. See *Sulfuric acid, manufacture.*

Lead chloride, systems formed by, with chlorides of univalent metals (Treis) 181; analysis of (Baxter) 984, 1412; Pb clouds in (Lorenz) 1565.

Lead chromate, analysis (Given) 1398; imitation chrome yellow 2458.

Lead compounds of cyclohexane (Grüttner) 804; in paints 1999; sepg. Pb-S compds from other ores (Langguth) P 2221.

Lead cyanide (Gupta) 566.

Lead deposits of northwestern Ill. (Cox) 579.

Lead dioxalodiaquochromiate (Werner) 35.

Lead dioxalodihydroxochromiate (Werner) 37.

Lead formate, electrodeposition of Pb from (Mathers) 267.

Lead nitrate, electrodeposition of Pb from, solns. (Mathers) 1275; system: Na_2HAsO_4–H_2O–$Pb(NO_3)_2$ (Curry) 2196.

Lead ores, Pb-Ag mines of Gilmore, Idaho (Nichols) 579; Ag in, of East Alpine Triassic limestone (Canaval) 1732; see also *Lead sulfide.*

Lead oxides, analysis of higher (Milbauer) 39; oxidizing Pb to form hydrated oxide (Holley) P 157; red lead (Holley) P 157 (Innes) P 387; dissociation (Reinders) 567; system: CuO–PbO (Cunningham) 567; detg. peroxide in com. PbO (Dean) 573; litharge, massicot or red lead (Holley) P 726; paste from Pb_3O_4 (Eckford) P 1125; system: AcOH–H_2O–PbO (Sakabe) 1284; detg. Pt in PbO (Michel) 1286; from Persia (Scott) 1289; exam. of litharge (Beck) 1443; vol. detn. (Moser) 1726; Pb_3O_4 specifications 1848; noble metals in PbO (Loevy) 1881; PbO in vulcanization (Stevens) 2327; in extg. Ag (Morris) 2502; manuf. of PbO (Barthelmess) P 2715; mfg. litharge (Barthelmey) P 3121.

Lead poisoning (Oliver, book) 108; electro-

Digitized by Google

lytic prevention of (Goadby) (Oxley) 824; in smelting and refining works 1201; from use of cosmetics (Robinson) 1204; by drinking water (Klut) 1207; estn. of Pb in urine in (Meillère) 1590; toxicology of Pb (Meillère) 1726; in manuf. of accumulators (Hamilton) 1878; (Rambousek) 1953.

Leads, altitude and spark-over voltages of elec. (Peek) 268.

Lead salts in cyanidation (Clevenger) 192; influence on wheat (Voelcker) 2281; complex and basic (Blomberg) 3185.

Lead sulfate, soly. of, in NH_4OAc solns. (Blomberg) 3185.

Lead sulfide, soln. velocity of galena in H_2SO_4 (Rosenkränzer) 276; translation in galena (Mügge) 281; Ag in galena ores (Nissen) 2047; sepn. of ZnS and, in ores (Rose) P 2055; concg., ores contg. Zn (Lavers) P 2218; complex, ores (Kingsley) P 2219; selective flotation (Owen) P 3216; in stomach (Meneguzzi) 3296.

Lead tannate and polarimetric detn. of sugar, dextrin and starch (Grossfeld) 1853.

Leakage, prevention of elec. (White) 3.

Leather, hyg.-chem. exam. (Strunk) 39; detection of cellulose exts. in (Moeller) 252 (Gansser) 535; bleaching (Sprague) 253 (Anon.) 2325; adulteration (Anon.) 253, 533 (Morrison) 1553 (Procter) 3143; detection of oak in (Rogers) 534; fats (Oskanerm) 727; Inds. Lab. Book (Procter, book) 1258; changes in appearance of natural and art. (Micksch) 1553; chemist and, ind. (Teas) 1553; theory of, formation (Fahrion) 1553 (Sommerhoff) 2160; Borax and Boracic Acid in, Manuf. (book) 1554; chrome soap in chrome (Hugonin) 1554; treating (MacDonald) 1856; wastes (Russell) 2281; "alum loading" in raw stock (Laemmle) 2325; utilization of refuse (Micksch) 2606; fat extn. of (Levi) 2994; sp. gr. of (Riethof) 2994; Die Lederhandschuhfabrikation (Jettmar, book) 2995; decree against neutral fats in, ind. (Fahrion) 3142; dyeing and staining of, in war time (Lamb) 3143. *Patents:* Softening (Röhm) 160; color designs on (Boyeux) 161; chrome tanning sole (Castiau) 161; washing (Karplus) 161; decolorizing, tanned with vegetable tannins (Friedrich) 161; waterproofing (Manforte) 161 (Terry) 393 (Allen) 871 (Hart) 1227 (McLennan) 2724; manuf. (Klipstein) 393 (Moore) 394 (d'Huart) 1133 (Röhm) 2724; preserving (Aguilar) 393 (McLarty) 1229 (Beatty) 1382; improving and preserving (Eitner) 730; filling (Krug) 730; dressing (West) 1133; drying patent (Schulz) 1703; decolorizing or bleaching (Badische) 2607; toughening (Gross) 2723; and rubber compns. (Cook) 3144; see also *Tanning*.

Leather, analysis, reagent on sulfite cellulose in (Appelius) 251; free SO_2 in (Paessler) 252, 977; chrome liquors and chrome leather (Bladerston) 534; N in (Nihoul) 977; lactic acid in (Lauffman) 1702; N in (Nihoul) 1702; tanning materials and cellulose ext. in (Lauffmann) 2161; cellulose ext. in (Lauffmann) (Moeller) 2161; detg. water-solubles in (Smoot) 2324; influence of method of subdivision (Lauffmann) 2722; Kjeldahl method (Hough) 2994.

Leather, artificial (Braun) P 162; shoe soles (Marschalk) 253 (Lindner) P 1857; (Damgaard) P 535; from paper stock (Schall) 730; (Lilienfeld) P 731; (Schall) 871; (McLaurin) P 1133; imitation enamelled (Wünschmann) P 1133; (Micksch) 1258; waterproofing and graining (Krug) P 1834; (Lilienfeld) P 1856; (Pauls) P 1857; dyeing (Girzik) P 2152, 2153; (Wawrziniok) (Herzog) P 2162; ind. during war (Armin) 2324.

Leather-board stock (Clapp) P 1133, 2995; waterproof (Gallivan) P 2325.

Leavening agents (Hart, book) 338; for bread (Kohman) P 2556, 2783.

Leaves, Die Stoffwanderung in ablebenden Blättern (Swart, book) 91; assimilation by green (Willstaetter) 2923; enzyme content of, of *Tradescantia* (Schwarze) 3086; see also *Plants*.

Leblanc soda process, CaS_2O_3 formed by (Kremann) 747.

Lecipur, 954.

Lecithin, Ueber einfache Pflanzenbasen und ihre Beziehungen zum Aufbau der Lecithine (Trier, book) 95; immunization of guinea pigs with tubercle bacilli dissolved in (Lindemann) 100; enzymes that decompose, in organs (Porter) 212; red corpuscles or suspended particles in, emulsion 261, metabolism of (Patta) 477; estn. in milk (Brodrick-Pittard) 639; prepg. (McLean) 1341; light and dark (Merck) 1366; glycerophosphoric acid in (Bailly) 1745; (Martin) P 2567; food contg. (Martin) P 2783; detn. in blood (Bloor) 2912.

Leduc effect in metals and alloys (Smith) 1002.

Leech extract, effect on coagulation of blood (Lee) 2667.

Lees, utilization of (Brauer-Tuchorze) 840; treatment of casse with (Porchet) 840.

Legumes, creatinine in (Oshima) 827; fertilizing value of above-ground parts of (Mikulowski-Pomorski) 1086; potassic fertilizer for (Barontini) 1219; influence of Mn on nitrifying bacteria of (Olaru) 1525; protein in (Westgate) 1651; N in (Whiting) 2550; urease in nodules of (Benjamin) 3086; effect of assoc. of, and non-legumes (Ellett) 3318.

Legumin, sol., and derivs. (Sato) 671.

Leishmaniosis (Cristina) 2552.

Lemon as source of citric acid and essential oils (Dunlop) 1659.

Lemon essence (Parrozzani) 844.

Lemongrass oil (Schimmel & Co.) 2692.

Digitized by Google

Lemon oil 352; detn. of citral in (Böcker) 843; extg. (Anon.) 1970 (Liotta) 2688.
Lens, philothion in cryst. (Rey-Pailhade) 936; injury to cryst., by violet and ultraviolet radiations (Carlo) 1348; anaphylactic reactions produced by albuminous substances of cryst. (Morax) 2265; see also *Eyes.*
Lenses, cement for joining eye glass, to mountings (Johnston) P 1227; colored (Davis) P 2806.
Leonhardite, secondary (Surgonov) 2859.
Lepidolite (Comucci) 2859.
Lesions produced by bite of "black fly" (Stokes) 654; production by injections of epinephrine and by extirpation of adrenals (Friedman) 3289; renal, produced by As compds. (Pearce) 3296.
Leucine, assimilation by plants of N in form of (Petrov) 682; active Me derivs. of (Fischer) 1483.
Leucite, alkali and Al_2O_3 from (Dougherty) P 2573 (Rody) P 2798, 2799.
Leuco base, $C_{14}H_{18}O_2$ and derivs. (Baeyer) 1034.
Leucocidin, streptococcal (McLeod) 1344.
Leuco compounds of indigoid dyes (Farbw.) P 1998 (Chilikin) 2507; of gallocyanins (Farbw. Durand, H. & Co.) P 2597.
Leucocytes. See *Blood corpuscles, white.*
Leucocytolysis, antitrypsin of blood serum with, by Th X (Rosenow) 820.
Leuco-indigo, pharmacol. action (Oelze) 1204.
Leuco salt mixtures of "hydro-blue" dyes (Schmidt) P 1997.
Leucothiotolene blue-green (Vlastelitza) 1750.
Leukemia. See *Leucemia.*
Leveling fine coal in coke ovens (Gewerkschaft, etc.) P 1109.
Levulinic acid, 2-quinylhydrazone (Fargher) 2890.
Levulinic aldehyde (Harries) 254.
Levulose, pseudo-, of urines (Cammidge) 1194; in urine (Justin-Mueller) 1931; in phlorhizin glucosuria (Lusk) 3279.
Lewis-Benedict method for estg. blood sugar (Pearce) 3262.
Libocedrus decurrens, oil of (Schimmel & Co.) 2692.
Lichens, depsides of (Bargellini) 210.
Lieben tubes, theory of (Lindemann) 749.
Life, Temp. und Lebensvorgänge (Kanitz, book) 91; origin (Moore) 474; Lebensdauer und seine Beziehungen zu Wachstum und Ernährung (Rubner, book) 919; dynamic conception of org. individual (Child) 2903.
Light, absorption of solar radiation by earth's atm. (King) 13; absorption of, by water changes by presence of hydrated salts (Schaeffer) 13; emission of metal vapors in glow discharge (Janicki) 15, 3150; Die Lichtbrechung in Gasen (Loria, book) 19; from unconsumed electrodes (Vosmaer) 25; formation of alkali carbonates from neutral salts in (Neuberg) 58; reactions of animals and plants (Hess) 89; physiol. and pathol. actions (Bering) 91; standard, source (Jones) 143, 398; microscopy of metals under polarized (Hanemann) 193; polymorphic hydroxybenzylideneamines produced by sun- (Senier) 202; polymerization of Et itaconate (Stobbe) 209; action of sun-, on bacterial spores (Weinzirl) (Bazzoni) 228; monochromatic (Wood) 264; production in Ne tubes (Claude) 264; formation and disintegration of dyes in (Gebhard) 381; filters (Mees) 398 (Getman) 1892; sensibility of Ag salts to (Guareschi) 399; -sensitiveness of pure Hg compds. (Eder) 409; oxidations with Br by (Cluss) 453, 1173; chem. change in (Sernagiotto) 468; micro- and macro-estns. in white (Neuberg) 470; org. syntheses by (Paternò) 618; reduction of aromatic ketones (Böeseken) 624; Tyndallmetric measurements in monochromatic (Mecklenburg) 742; sensitiveness of ferric salts (Winther) 748; action on Cl-H_2O (Dawson) 748 (Benrath) 1709; polarization of, falling on metal screen (Schachenmeier) 750; isomerization of carvone in (Sernagiotto) 797; diffraction of, by spheres of small relative index (Rayleigh) 884; dispersion of, in gases (Koch) 884; Mesure de la vitesse de la lumière (Foucault, book) 886; Ueber die Bedeutung des Lichts für die Bildung und Stabilität Kolloider Lösungen (Nordenson, book) 886; does ionization of Cl-Knall gas commence on exposure to? (LeBlanc) 1000; diffusion of, by air (Cabannes) 1002; sensibility of Se and stibnite at 20° and —190° (Elliott) 1002; rotatory dispersion in quartz (Lowry) 1003; La fotografia a luce lampo (Namias, book) 1014; absorption by inner complex salts (Ley) 1055; polarization control tubes (Optische Anstalt, etc.) P 1139; demonstrating emission of (Gehrcke) 1145; polarization of, emission of canal rays (Stark) 1145; chem. action of—auto-oxidations (Ciamician) 1178, 2089; syntheses by means of (Paternò) 1315; Se especially sensitive to (Ancel) 1427; complexity of, action in Se cells (Sieg) 1428; detg. radiant luminous efficiency of, sources (Karrer) 1579; condensation nuclei produced by action of, on I vapor (Pealing) 1579; unit of c. p. in white (Paterson) 1720, 3023; art., in titration of hop resins (Schmidt) 1823; estn. of high temps. by color (Paterson) 1869; measuring pressure (West) 1871; radiation of art., compared to day- (Strache) 1873; polymorphic vanillylidenearylamines produced by (Senier) 1906; intensities of spectrographs and monochromatics (Volkmann) 2029; active wave lengths of color filters (Pirani) 2030; photometry of vari-colored (Pirani) 2031; action of sun-, on cinnamic acid (de Jong) 2088; action in Se (Brown) 2185; theory of cold (Bancroft) 2185; radiation of gas mols. excited by (Wood) 2186; constitution of org. compds. and their absorption of (Baly) 2229; constitution of triphenylaminoethyl alc. obtained by action of (Monti) 2241; sun-, and variations in respiratory activity (Speehr)

obtaining $Ca(NO_3)_2$ (Schloesing) 849; kiln (Crosland) 854; blocks (Neumarkel) 855; working, sand (Siedentopf) 1105; adding to coal (Stadtgemeinde Berlin) 1244; Cu-, powder for plant treatment (Pleines) 2282; increasing, content of glass (Brookfield) 2300; (Pearson) 2307; slaking (Anker) 2445, 2446, 2703; slaking and discharging (Schondeling) 2446; bast fibers of, wood (Waganoff) 2712; for absorption of nitrous gases (Norsk Hydro-Elek., etc.) 2803; hydraulic (Basset) 2975; app. for hydrating (Avram) 3347; see also *Calcium, analysis; Calcium hydroxide; Calcium oxide; Fertilizers, calcium; Kiln.*

Lime juice, detection of HNO_3 in (E'We) 513; (McGill) 940.

Lime-nitrogen. See *Calcium cyanamide.*

Limes as source of citric acid and essential oils (Dunlop) 1659; oil from seeds of (Tempany) 3140.

Limestone, Durham Mg (Trechmann) 428; grahamite in Silurian (Doss) 579; detg. P_2O_5 in (Hinden) 1730; in rotation expts. (Lipman) 1817; paints for, 1848; soln. on bottom of Lake Ontario (Kindle) 1890; East Alpine Triassic (Canaval) 1732; development (Daly) 2050; formation of $Ca_3(PO_4)_2$ from $CaHPO_4$ and (Brackett) 2280; weathering (Merrill) 2368; burning (Endell) 2444; for acid soils (Thomas) 2558; reef, formation (Cary) 2634; formations (Aitken) 3192; Ordovician (Daly) 3197; see also *Calcium carbonate.*

Lime-sulfur, comp. of soln. (Thompson) 348 (Whittier) 503; field test for, dipping baths (Chapin) 686; (Ramsay) 838; *vs.* Oidium (Cadoret) 839; chem. compn. and valuation of, liquor (Bodnár) 3114; (Auld) 3183; analysis (Averitt) (Roark) 3320; (Tartar) 3321.

Limonene auto-oxidation (Blumann) 86.

Liming. See *Lime; Sugar industry.*

Limulus, *L. polyphemus* (Alsberg) 487; digestion in (Mattill) 3102.

Linaloöls isomeric (Paolini) 1323; (Barbier) 1602.

Linalyl acetate, velocity of sapon. of (Barillet) 1421.

Linear structure of steel (Oberhoffer) 433, 434.

Lincrusta (Jaek) P 2156.

Linden, bast fibers of (Waganoff) P 2712.

Linen, waterproofing (Tondl & Co.) P 156; Weaving (Woodhouse, Milne, book) 529; drawing (Dürener Fab. etc.) P 725; From Raw Material to Finished Product (Moore, book) 1121; oxycellulose in (Saget) 1394.

Liniment (Baines) P 1225; Worner's oil (Puckner) 2129.

Linings, basic, in steel works (Wagner) 48; acid-resisting, of bomb calorimeters (Parr) P 49; metal resistor tubes (Bradley) P 562; for crucibles, furnaces (Ges. zur Ausbeutung, etc.) P 2222; refrigerator (Seaman) P 2300; in rotary furnaces (Happe) (Dynamidon, G. m. b. H.) P 2301; for elec. furnaces (Brüstlein) P 2353; basic, for tube furnaces (Happe) P 2443, 2579; for coke oven doors (Hoss) P 2450; metallic non-corrosive, for tanks (Zürn) P 2803; furnace (Frick) P 2807; for sintering zone of rotary kiln (Dynamidon Ges.) P 3344; basic refractory, for lime- or cement-kilns (Newberry) P 3347.

Linkages. See *Bonds.*

Linoleates, metallic content (Radcliffe) 2987.

Linoleum (Storp) 40; substitute (Kausch) 248 (Hüneke) P 1399; figured (Höber) P 727; (Humphreys) P 1126; (Blabon) P 1253; German ind. (Fritz) 1253; varnishes for (Girzik) P 1398; lithographic printing on (Wood) P 1551; colored (Jaek) P 2156; masses (Reichhold) P 2460; cement (Micksch) 2819.

Linoxyn (Fritz) 2000; products resembling (Schaefer) 2002.

Linseed, rate of liberation of HCN from (Collins) 1078; as farm crop in England—variation in oil content (Eyre) 1697.

Linseed meal, P metabolism of lambs fed alfalfa hay, corn and (Ross) 2774.

Linseed oil, I no. of (Smith) 157; detg. unsaponifiable matter in boiled (Barány) 969; detection of adulteration (Darner) 970; O absorption of (Darner) 970; treated with Co, Pb and Mn elaeostearates (Wise) 970; fatty acid soaps (H.) 1256; drying (Fritz) 1397, 2987; action of white Pb on (Thompson) 1397; bleaching and thickening (von Kreybig) 1848; boiled, and the com. resinate oil of today (Niegermann) 1848; specifications for purity of raw, from N. Am. seed, 2819; utilization of formic and acetic acids produced by oxidation of (Fritz) 2988.

Linseed oil substitutes (Meyerheim) 1397; (Waentig) P 2318, 2320.

Lint, detn. in cottonseed meal (Brackett) 2407; from crushed cottonseed, 2321.

Lipamin, 955.

Lipase developed by tubercle bacilli, etc. (Kendall) 216; enzyme action (Armstrong) 327; of castor beans (Falk) 634; auxo-, of serum (Tsuji) 1622; ester-splitting faculty of normal tissues—$CHCl_3$ necrosis of liver (Quinan) 1637; of soy beans (Falk) 1922; (Umeda) 1789; action of serum on, of pancreatic juice (Shaw-Mackenzie) 2769.

Lipemia, origin of cholesterol in (Beumer) 644; fat in blood in (Imrie) 821.

Lipins in nutrition (MacArthur) 926; demonstration of osmotic pressure exerted by (Gies) 3078.

Lipocolloids, absorption in plasma membrane (Czapek) 2102.

Lipoids in spleen and blood (Kusonoki) 99; of human serum—estn. (Klein) 470 (Greenwald) 1925; as inhibitors of anaphylactic shock (Jobling) 482; doubly refracting, in urine (Secchi) 483; of tissues and nutrition (Terroine) 645; tissue, variations (Terroine) 647 (Mayer) 647, 648; and water (Mayer)

chlorophyll (Mameli) 2925; e. m. f. of, amalgams (Cambi) 3024; in albicant and chlorotic plants (Mameli) 3270; and production of hyaline casts (Gates) 3289.

Magnesium, analysis, sepg. Ca and Mg salts (Blomberg) 422; detg. in presence of Ca (Froboese) 1644; sepn. from Li (Dinwiddie) 1885; in water (Andrew) 1952.

Magnesium alloys with Ce (Vogel) 2216; Mg-Hg (Cambi) 2847.

Magnesium ammonium phosphate, calcination of (Vecchi) 898 (Pereira) 2492.

Magnesium arc. See *Electric arc.*

Magnesium boride (Ray) 276.

Magnesium calcium carbonate (Schmidt) 2858.

Magnesium carbonate, systems: $MgCO_3$, CO_2, H_2O and $CaCO_3$, $MgCO_3$, CO_2, and H_2O (Leather) 181; in humid soils (MacIntire) 346; basic (Silbermann) P 360; protective action of $CaCO_3$ *vs.*, for *A. chroococcum* (Lipman) 837; and ammonification (Kelley) 946; analysis of basic, by H_3BO_3 method (Winkler) 1157; (Hambloch) P 1377; absorptive power of, for volatile products (Maranne) 1530; (Hambloch) P 1536; solubility in natural waters (Wells) 2206; solubility (Gothe) 2275; in limestone for acid soils (Thomas) 2558; solubility product const. (Johnston) 2614; interaction between acid phosphates and carbonates, sulfates and chlorides of Ca and Mg (von Hest) 2964; effect of, on nitrification (Kelley) 3112.

Magnesium carbonitride (Peacock) P 1278.

Magnesium chloride, mixt. for forming "sorel" cement (Reuter) P 140; and growth of corn (Caldwell) 685; as mineralizer (Hofmann) 1015; pyrophoric deposits by electrolysis of $FeSO_4$, glycerol and (Kremann) 1152; detg., in water (Precht) 1357; calcn. of, in waters (Fischer) 1952; solidification of concd., liquors (Hof) 2293; formation of HCl in evapn. of solns. of (Hof) 2359; utilizing, waste liquors (Buckau) P 2439; compd. with sarcosine (Pfeiffer) 2653; utilization of, liquors from potash ind. (Chem. Fab. Buckau) P 2803; influence on health of H_2O containing (Reimer) 2954; interaction between acid phosphates and carbonates, sulfates and chlorides of Ca and Mg (von Hest) 2964; pharmacol. action of (Burridge) 3100; influence on tendering of cloth during singeing (Thomson) 3132.

Magnesium citrate (McGill) 845; (Léger) 1973.

Magnesium compounds, action of tertiary pyrroles on magnesyl compds. (Oddo) 73; with higher fatty acids (Haupt) 295 (Zink) 2157; of pyrocatechol (Weinland) 305; action of org., on Me 1,2-hydroxynaphthoate (Preissecker) 598; action of Se_2Br_2 on magnesyl alkyls (Pieroni) 1039; action of org., on Se halides (Strecker) 1179; action of org., on Me cresotinate (Berlitzer) 1466; action of salts of heavy metals on org. (Konduirov) 1473; action of CO_2 on etherates of alkyl-Mg halides (Chichibabin) 1751; prep. of ethers from acetals and org. (Chichibabin) 1751; reaction of esters with org. (Stadnikov) 1754; action of CO on org. (Egorova) 1904; Mg complexes of pyrrole, etc. as related to chlorophyll (Chelintzev) 2071; Mg derivs. of piperidine, etc. (Chelintzev) 2072; structure of Mg-org. complexes (Chelintzev) 2640; Ueber Kobaltmagnesium-Rot (Hedvall, book) 2853; reaction of esters with iodomagnesium alcoholates (Stadnikov) 3051, 3052.

Magnesium dioxalodiaquochromiate (Werner) 35.

Magnesium glycerophosphate, narcosis by (Kobert) 3295.

Magnesium-green (Hofmann) 1015.

Magnesium-hexamethylenetetramine tetrathionate hydrate (Calzolari) 2845.

Magnesium hydroxide, action of $Fe(OH)_3$, $Al(OH)_3$ and $Bi(OH)_3$ on (Quartaroli) 32.

Magnesium iodide, sapon. of esters with etherate of (Zal'kind) 1748.

Magnesium organic compounds. See *Magnesium compounds.*

Magnesium oxides, Mg suboxide (Frary) P 1285; see also *Magnesia.*

Magnesium oxychloride cement (Dietz) P 1434.

Magnesium perborate (Weber) P 696 (Henkel & Cie) P 1096, 1979, 2298.

Magnesium phenyl bromide. See *Phenylmagnesium bromide.*

Magnesium phosphate, interaction between acid phosphates and carbonates, sulfates and chlorides of Ca and Mg (von Hest) 2964; in poppy capsules (Kimiel) 2968; osmotic properties of, in relation to those of living cells (Meigs) 3257; ignition of (Cuthbert) 3186.

Magnesium-red (Hofmann) 1015.

Magnesium salts, action on complexes of Al, Fe, and Bi with org. substances (Quartaroli) 31; transformation of, in Werra deposits (Rozsa) 281; stimulating action on lactic fermentation (Richet) 3077; narcosis by (Kobert) 3295.

Magnesium silicate, system: Mn_2SiO_4– (Kallenberg) 276.

Magnesium sodium borosilicate glass (Weintraub) P 3034.

Magnesium sulfate dehydration (Merwin) 31 (Honda) 2610; effect of injection into intestine (Sato) 337; epsom salt (R. Heinz, etc.) P 361; (Alsop) 870; art. transiations in (Johnsen) 2175; in plaster of Paris (Canals) 2290; purgative action (Meltzer) 2401; influence on health of water containing (Reimer) 2954; interaction between acid phosphates and carbonates, sulfates and chlorides of Ca and Mg (von Hest) 2964; elec. resistance of soln. (Pieri) 3191; narcosis by (Kobert) 3295; and production of hyaline casts (Gates) 3301.

Magnet, imitating permanent, by super-conductors (Onnes) 545; steel for permanent (Thompson) 1893.

Magnetic deflection of recoil stream from Ra-A (Walmsley) 1005.

Magnetic field, action of elec. field and, on red H line (Garbasso) 18; elec. resistance in (Onnes) 735; of an atom and spectral series (Allen) 753; resonance of Na vapor in (Strutt) 1269; change of length in Ni wire due to low alternating (Brown) 1296; electro-, in anisotropic medium (Francesco) 1426; distn. of liquid air in (McBride) 2032; effect on emission lines of solids (Mendenhall) 2733; elec. resistance of sheet in (Corbino) 2835; variation of resistance of Bi in (Trabacchi) 2835.

Magnetic nucleus, orbits of charged particle round (Hicks) 1580.

Magnetic permeability, temp coeff. (Sanford) 1025.

Magnetic properties of electrolytic Fe melted *in vacuo* (Yensen) 906; thermo-, at low temps. (Ishiwara) 996; effect of compn. on (Ruder) 1168; ferro-, and detn. of elementary elec. charge (Kunz) 2732.

Magnetic resistance, change of pure Fe (Heising) 173.

Magnetic rotation in Ti chlorides (Siertsema) 3165.

Magnetic susceptibility and electrolytic dissociation (Quartaroli) 1417, 2017; of oxides of Mn, Cr, U, Mo and W (Wedekind) 1268; influence of mol. constitution and temp. on (Oxley) 1426; of Fe-bearing Pt (Sosman) 1580.

Magnetic treatment, equalizing mol. stresses by (Heinze) P 1170.

Magnetism structure changes in Fe and Cr compds. at higher temps. (Honda) 173; deviations from Curie's law in connection with zero-point energy (Oosterhuis) 410; of compds. of H_2O and of aq. solns. (Gray) 410; phenomena of paramagnetic satn. (Onnes) 545; of metals and alloys (Eger) 780; effect of, of electrodes on e. m. f. (Elias) 880; and Electricity (Richardson, book) 886; habits of alloy steels (Mathews) 1146; measurements on Heusler's Sn-Mn bronzes (Take) 1146; prep. of alloys for magnetic research (Freudenreich) 1168; influence of mol. constitution and temp. (Oxley) 1713; of chrome and W steels (Moir) 1893; thermomagnetic study of steel (Smith) 2214; at. model with magnetic core (Allen) 2483; metamagnetic alloys (Overbeck) 2622; Thermomagnetic Study of Eutectoid Transition Point of C Steels (Smith, Guild, book) 2869; new theories of (Weiss) 3166; electromagnetic inertia and at. wts. (Nicholson) 3170; Numerical Data of (Dutoit, Lewis, Mahlke, book) 3175; magnetic transformations in Fe-C alloys (Rumelin) 3209; see also *Magnetization.*

Magnetization, initial, as function of temp. (Weiss) 1427; Curie-Langevin law of (Holm) 2484; kinetic theory of polarization e. m. f. of (Gaicu) 3013.

Magnetochemistry of Cu salts and magneton theory (Cabrera) 3167.

Magneton and detn. of elementary elec. charge (Kunz) 2732; magnetochemistry of Cu salts and, theory (Cabrera) 3167.

Magneto-optical absorption, Zeeman and Winawer, effect (Voigt) 1002.

Magnetostriction and resistance of Fe and Ni (Heaps) 2484.

Maize. See *Corn.*

Majolica, imitating (Chiapponi) P 1984.

Malacolite -rocks (Stiny) 1449.

Malaria, behavior of salvarsan in (Schumacher) 3253.

Malchite (Sandkühler) 2050.

Maleic acid, transformation into AcH (Neuberg) 59; effect of penetrating rays on (Kailan) 1301.

Malic acid and fermentation of sugar (Neuberg) 472; in sugar maple sap (von Lippmann) 1184; conversion of racemic acid into a mixture of racemic and *d*-tartaric acids by means of *l*- (McKenzie) 2223; polarization of (Gore) 3105.

Malignant tumors. See *Cancers; Carcinoma; Sarcoma; Tumors, malignant.*

Malleability, increasing, of Fe or steel (Dismore) P 1880.

Mallow, coloring matter of wild (Willstätter) 1307.

Malnutrition. See *Diet; Nutrition,* etc.

Malonic acid, di-Na derivs. of di-Et ester (Macbeth) 62; condensation of furane-2,5-dialdehyde with, and malonic ester (Cooper) 204; action of acylamino acid chlorides on sodiomalonic ester (Gabriel) 313 (Immendörfer) 1913; phthalylglycyl chloride and sodiomalonic ester (Gabriel) 313; reactions of Na-malonic ester (Jackson) 2089, 2531; condensation of acid chlorides with Et ester (Bradshaw) 2517; prep. of Et ester (Scarborough) 2895.

Malonic nitrile, poisoning by (Somer) 104.

Malonylbisanthranil (Heller) 2545.

Malonylbisanthranilic acid, bishydrazone (Heller) 2545.

Malonylmonobenzanilide (Mumm) 1485.

Malt, melanoidins in kiln- (Ruckdeschel) 118; starch detn. in (Cappuyns) 119; ext. detn. in (Doemens) 119; germination of 234; of 1914 (Koritschoner) 350; new Ger. standards for analysis (Bode) 504; detg. mineral constituents in (Schönfeld) 690; sugar as substitute in top-fermentation (Emslander) 690; from barley of 1912–13 (Pürmrohr) 690; starch-forming enzyme from (Davis) 690 (Born) 2562; purchase of, on basis of analysis (Heron) 841; millet (Hérics-Tóth) 862;

Digitized by Google

color detn. of black-, infusions (Schnegg) 1222; dextrinized, in infant-feeding (Le-Boutillier) 1495; proteolytic enzymes in (Westergaard) 1821; P_2O_5 in (Schönfeld) 1822; (Siebel) 1822; (Lüers) 1823; amylase (Sherman) 1921; action of enzyme of, on insol. cell-substance of beet (Herzfeld) 1967; enzymes in, producing polypeptides and amino acids (Adler) 2123; lactic acid in production of (Wahl) 2123; formation and detn. of acids in (Lüers) 2283; nomenclature of coloring substances (Lintner) 2284; beer wort prepd. from (Moufang) 2562; substitutes (Takamine) P 2563; caramel (Lowitz) 2687; phosphatases of (Adler) 2907; hemicellulase in (Heintz) (Windisch) (Lintner) 2964; amylase of (Petit) 3070; diastatic, ext. (Pollak) P 3116; drying green (Schulze) P 3116; detn. of total formol-titratable N in (Adler) 3322.

Maltase, activity of dialyzed (Kopaczewski) 2389.

Malt extract (Nilson) P 234; % yield in (Werby) 350; (Briant) 1090; detg., in beer (Lehmann) 1090; contg. vitamine (Wielen) 2126; (Hoffmann) P 2274; computation of yield (Windisch) 2284; removing bitter taste and burnt smell and taste from (Cantor) P 2285; diastatic (Pollak) P 3326.

Malting (Chichester) P 120; (Sleeman) P 951; app. (Dornfeld) P 2563.

Maltose, hydrolysis of, by HCl (Daish) 196 (Davis) 922; structure, and oxidation with alk. H_2O_2 (Lewis) 453.

Maltose octalcetates (Hudson) 1770.

Malt sprouts as feed for milk production (Völtz) 2774.

Malvine salts (Willstätter) 1307.

Malvinidine salts (Willstätter) 1307.

Mammary glands, rate of passage of fatty acid of food into, of goat (Bowes) 2931; action of corpus luteum on (Ott) 3284.

"Mamushi," constituents of (Suguro) 664.

Mandarine oil (Schimmel & Co.) 2692.

Mandelhydroxamic acid and Cu salt (Angeli) 1323.

Mandelic acid, asym. synthesis of (Erlenmeyer) 1466.

Manganese in springs of central massif (France) (Jadin) 46; localization of, ions in roots and formation of protein substances (D'Ippolito) 95; removing from water (Vollmar) 343, 3315 (Tillmans) (Vollmar) P 2415; and the war 430; and corrosion of steel (Desch) 431; and C at higher temps. (Ruff) 435; effect on phys. properties of Cu (Karr) 589; biochem. of,—relation between, and Fe in respect to vegetation (Pugliese) 641; in seed coat (McHargue) 925; statistics (Osborne) 1024; soil concretions due to (Heibig) 1292; non-[illegible] properties of (Bokorny) 1510; in-[illegible] cteria of leguminous [illegible] eduction in blast [illegible] spectrum (Fuchs) [illegible] district, deposits (Pilz) 2048; sepn. from alkali and alk.-earth metals (Fisher) 2199; slag contg. Mn (Lorenz) 2474; diopside (Uhlig) 2632.

Manganese, analysis, pptn. with $(NH_4)_2S$ (Seeligmann) 40, 1884; in soil (Horváth) 114; (Massinon) 185; in steel, iron ore and slags, 278; in Thomas meal (Holle) 348; MnS in (Villiers) 766; sepn. of Fe and Mn groups (Pelt) 768; in ferrovanadium (Clark) 1018; in water (Winkler) 1517; volumetric detn. Mn oxides (Moser) 1726; (Sacher) 2043; (van Pelt) 2361; in Fe ores (Fleckinger) 2630; (Bardach) (Sacher) 2855; in paint, etc. (Sacher) 3134.

Manganese alloys, magnetizable (Heusler) 193; treating, contg. Fe, Al, and Si to reduce elec. and magnetic loss (Hadfield) P 437; heat-treating wrought Mn steel (Potter) P 438; Mn steel (Hall) 778; Mn steel casting 778; Bi- (Bekier) 779; magnetic measurements on Heusler's Sn-Mn bronzes (Take) 1146; system: Fe–Mn (Rumelin) 1166; with Zn (Parravano) 1454; deformation lines in Mn steel (Howe) 2372; Mn steel and allotropic theory (Sauveur) 3200; standard specifications for 3201; bronze (Jones) 3205.

Manganese azide (Wöhler) 1115.

Manganese carbonates, oxidation of $MnCO_3$ by bacteria and fungi (Beijerinck) 471.

Manganese chloride compd. with hexamethylenetetramine (Vanino) 1049; effect on liver autolysis (Bradley) 1920.

Manganese deposits (Papp) 580.

Manganese-hexamethylenetetramine chloro- and bromomercuriates (Calzolari) 2846.

Manganese ores, petrography of Kodurite series of India (Cross) 581.

Manganese oxides, MnO_2 anodes (Siemens & Halske A.-G.) P 1156 (Isherwood) P 2191; magnetizability of (Wedekind) 1268; prepn. of MnO_2 and transformations of colloidal (Witzemann) 1567; concretions in Mesozoic deep-sea deposits (Molengraaf) 2209; formation of isomorphous mixed crystals between CoO and MnO (Hedvall) 3039; influence of, on nitrification (Leoncini) 3113; pptd. MnO_2 (Harper) P 3335.

Manganese salts, electro-oxidation of (Sem) 3183.

Manganese silicates, systems: Mn_2SiO_4–Ca_2SiO_4; Mn_2SiO_4–Mg_2SiO_4; $MnSiO_3$–$FeSiO_3$ (Kallenberg) 276.

Manganese sulfides (Villiers) 766; (Fisher) 2197.

Manganin, resistance of, at low temps. (Onnes) 880.

Manganosite (Ford) 425.

Mango, lymphagogic action of (Gibson) 1942; compn. of Hawaiian (Thompson) 3104.

Mangostin (Hill) 2061.

Mannitol, metabolism of certain bacilli in, broths (Kendall) 215; decomp. of, by *B. coli communis* (Grey) 330; from sea grass (Norsk Tangsyndikat) P 362; in soil (Skinner)

Digitized by Google

1961; effect of H_3BO_3 on methylated derivs. (Irvine) 3229; test for (Mandel) 3081.
d-**Mannonic acid** esters and lactones (Hedenburg) 908; test for, lactone (Mandel) 3081.
Mannose, *l*-, crystalline (van Ekenstein) 1175; cyclohexylhydrazone (Kizhner) 2065; test for *d*- (Mandel) 3081.
Mannose pentaacetates (Hudson) 1771.
Manometer, Hg (Schultze) P 2332.
Mantles, thermometers with vacuum (Dimmer) 2167; see also *Lighting, gas mantles*.
Manure, destruction of fly larvae in (Cook) 1359, 3313; see also *Fertilizers*.
Maple sap, org. acids from (von Lippmann) 625; occurrence of malic acid in (von Lippmann) 1184.
Marble, calcite of Vermont (Dale) 1291; brecciated, of Bova-Palizzi (Zaccagna) 1292; multi-colored, mosaic (Gianotti) P 1988; weathering (Merrill) 2368; see also *Stone, artificial*.
Marcasite (Allen) (Merwin) 187.
Marchpane (Lehmann) 2783.
Margarine. See *Oleomargarine*.
Marjoram adulteration (Seeger) 1945.
Marl in modern farm management (Tacke) 1217.
Marlocsite (Thomas) 428.
Marmalade from dates (Peter) P 111; (Douglas) P 493; detg. citric acid in (Kunz) 687.
Marshmallows (McGill) 227.
Martensitic structure, crystal twinning and (Desch) 436.
Martensitization, hardening with and without (Howe) 589.
Marytynia Louisiana (Bailey) 2989.
Mash, filter for brewers' (Schaefer) P 350; acidification by *B. delbrücki* in sugar beet (Heinzelmann) 1090; distg. fermented (Woolner) P 3116; see also *Brewing*.
Mashing (Freund) P 234; lab., methods and N compds. in wort (Ehrich) 350; temps. and comp. of wort (Ehrich) 350; mashing waters and wort (Ehrich) 842; influence on ester content of beers (Windisch) 1089; see also *Brewing*.
Mass, change of, of small Hg drops in suspension in a gas (Schidlof) 2029; changes of, in formation of atoms (Harkins) 2334, 2335.
Mass action law and double decomp. of CaS_2O_3 (Kremann) 747; S in vulcanization (Skellon) 2005.
Masseculte, control of d. of (Coombs) 1701.
Massicot. See *Lead oxides*.
Mastic, art. and distd. (Dieterich) 1092; (Friedlaender) 1662; "arbertol" as substitute for (Maue) 1662; partially neutralized resin solns. (Dieterich) 1662; oil of (Schimmel & Co.) 2692.
Mastication, utilization of ingested protein as influenced by under- and over- (Foster) 1633.
Masticator for crude washed rubber (Pointon) P 1704.
Matches, detecting white P in (Phelps) 184; waterproofing (Cruser) P 862; compn. for, heads (Pierson) P 1692 (Staier) P 2313; non-glowing splints (Gabriel) P 2453 (Fairburn) P 2815; friction surface for (Anderson) P 2454; "double-dipped" (Fairburn) P 2815, 3363; ignition compn. for (Shadid) P 3130.
Materials, testing, photography and (Dalby) 49; Strength of Materials (Andrews, book) 2856; at Watertown arsenal in 1914, 3206; metals (Batson) 3207; (Lanza) 3208.
Materia medica (White, book) 125; of British Pharmacopeia of 1914 (Beringer) 2969.
Mathematics for Scientists and Physicians (Saltpeter, book) 886.
Matricaria chamomilla (Power) 64.
Matrix comp. (Bacigalupi) P 1377; for intaglio or relief plates (Aylsworth) P 2296.

(Onnes) 1580; -jet interrupter (Bigge) P 1721; acceleration of oxidation of Al by (McClendon) 1866; spectrum from, vapor in elec. field (Child) 1874; diffusion of gases through, vapor (Gaede) 2020; thermal expansion (Harlow) 2023; changes in mass of drops in suspension in a gas (Schidlof) 2029; thermometers (Hoffmann) 2331; thermal cond. (Nettleton) 2345; electrolytic meters (Bossom) 2487; excretion by gastric mucous membrane (Lieb) 2673; action on P halides (Wolf) 2847; poisoning (Kahn) 2943; resistance thermometer (Jaeger) 3149; ionization potential and spectrum of (McLennan) 3155; f. p. of (Kaye) 3161; in treatment of pyorrhea alveolaris (Wright) 3299; see also *Lighting, electric (vacuum tube lights)*.

Mercury, analysis, detg. in H_2SO_4 (Nissenson) 278; in org. Hg compds. (Abelmann) 279; in urine (Klotz) 470 (Perlstein) 3260.

Mercury, metallurgy of, wet process (Carrara) 191 (Thornhill) 1891 (Mulholland) 2755; in Europe (Sterner-Rainer) 191; (Thornhill) P 195; mining and reduction of, Oceanic Mine, Cambria, Calif. (Heberlein) 1739; from residues of amalgamated Co ores (Thornhill) 1740; recovery of Hg from amalgamation tailings (Thornhill) 2369; (Szilard) P 2742; working up of Hg-bearing by-products in Zn plants (Juretzka) 3199.

Mercury acetates, compd. of $Hg(OAc)_2$ and $PhNH_2$, and Ac deriv. (Vecchiotti) 448; pptn. of amino acids with $Hg(AcO)_2$ (Neuberg) 470; use of $Hg(OAc)_2$ soln. for investigating terpenes (Balbiano) 1486.

Mercury air pump. See *Pumps*.

Mercury alloys. See *Amalgams*.

Mercury arc. See *Electric arc*.

Mercury benzoate, incompatibility of cocaine-HCl and (Guyot) 1368.

Mercury benzoate-cyanide (Gerngross) 57.

Mercury bromide, double salts of $HgBr_2$ with Ph_2Te, etc. (Lederer) 3241.

Mercury cathode. See *Cathode*.

Mercury chlorides, $HgCl_2$ compd. of $AcOC_6H_4CO_2H$ (Gerngross) 57; detg. HgCl in calomel tablets (Marden) 122; $HgCl_2$ poisoning (Moll) 486 (Barbour) 1204 (Soer) 2944; reduction of $HgCl_2$ by HCO_2Na (Linhart) 567; association of aq. $HgCl_2$ (Linhart) 878; distribution of Hg in $HgCl_2$ poisoning (Rosenbloom) 934; distinguishing between HgCl and $HgCl_2$ (Wohlschläger) 1367; e. m. fs. in alc.—combinations of H and calomel electrodes (Furness) 1423; poisoning by HgCl after drinking Vichy water (Spindler) 1509; antidote for $HgCl_2$ poisoning (Hall) 1531; estg. HgCl (Grantham) 1532; incompatibility of tincture of I and $HgCl_2$ soln. (Reutter) 1664; effect of $HgCl_2$ on the blood (Donzello) 1806; $HgCl_2$ and wood preservation (Grubenholz., etc.) P 2446; action of $HgCl_2$ on org. S compds. (Ray) 2890; $HgCl_2$-triazole complex (Brunner) 3058; influence of hydroxylic compds. on soly. of $HgCl_2$ in H_2O (Moles) 3158; action of halogens on $HgCl_2$ (Chateau) 3181.

Mercury compounds, detn. of C, H and Hg in org. (Abelmann) 279; of the pyrazolone series (Schrauth) 303; mercurized aromatic alcs. (Abelmann) 314; light-sensitiveness of pure (Eder) 409; for disinfecting (Bayer & Co.) P 956; of tyrosine (Hoffmann) P 1371; Hg derivs. of aromatic amines (Jacobs) 1609; of aliphatic amines (Raffo) 1881; organic (Farbw.) P 1975 (Chem. Fab. v. Heydem) P 2567 (Morgan) 2889; org. colloidal (Raffo) 2022; mixed Hg dialkyls (Hilpert) 2251; of basic purine derivs. (Rosenthaler) P 2426; with triazoles (Brunner) 3058.

Mercury cyanides, $Hg(CN)_2$ compd. of $AcOC_6H_4CO_2H$ (Gerngross) 57; action of metals on $Hg(CN)_2$ (Pertuse) 769; compd. with $(CH_2)_6N_4$ (Vanino) 1049; ferrocyanides and $Hg(CN)_2$ (Strömholm) 1437; compds. of chromates and dichromates with (Strömholm) 1437; hydrargyrum oxycyanatum (Herzog) 2285.

Mercury deposits of Kuskokwim region, Alaska, 1592; of Mazatzal Range, Ariz. (Ransome) 3196.

Mercury-glycocoll (Bernardi) 794.

Mercury hemoglobinates (Kobert) 463.

Mercury iodides, cryoscopic const. of (Beckmann) 262; system HgI_2–$PhNH_2$ (Pearce) 294; system: Et_2O–H_2O–KI–HgI_2 (Dunningham) 401; (Smits) 1421; action of NH_4 salts on HgI_2 (Guareschi) 2358; double salts of HgI_2 with Ph_2Te, etc. (Lederer) 3241.

Mercury nitrates, estg. sucrose and lactose in condensed milk with $Hg(NO_3)_2$ (Revis) 492. 941; double salt of basic $Hg(NO_3)_2$ and di-*p*-tolyl telluride (Lederer) 3241.

Digitized by Google

Mercury nitrite compds. of $Hg(NO_2)_2$ with org. thio derivs. (Ray) 2889.
Mercury preparations, mercurial powder (Unna) 3116; action and resorption of (Döhring) 3295.
Mercury pump. See *Pumps.*
Mercury salts, detecting SO_2 in air by (Denigès) 1359; double, of aromatic tellurides (Lederer) 3241.
Mercury succinimide injections in pyorrhea alveolaris (White) 3299.
Mercury sulfates, solubility of $HgSO_4$ in H_2O and $CdSO_4$ solns., 22; $HgSO_4$ for standard cells (Warburg) 1007.
Mercury sulfides, pigment from ores contg. (Eibner) P 1696.
Mercury thiophenolate (Lecher) 3241.
Mercury-vapor lamp. See *Lighting, electric (vacuum tube lights).*
Merotropism. See *Isomerism.*
Merzalin (Hesseland) 2691; (Merz) 3327.
Mesembrene and acetate (Hartwich) 1092.
Mesembrine (Hartwich) 1092.
Mesembrianthemum, *expansum* and *tortuosum* (Hartwich) 1092.
Mesembrol (Hartwich) 1092.
Mesentery, relation of I values of mesenteric and kidney fatty acids to those of liver fatty acids in pregnant and lactating rabbits (Cooper) 2932.
Mesityl bromomethyl ketone (Jacobs) 2077.
Mesityl compounds (Wenzel) 599.
Mesityl dichloride, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
Mesityl oxide, condensation of phenol with (Dianin) 1903; (Hibbert) P 2291.
Mesitylcylacetic acid and Et ester (Wenzel) 599.
Mesityl phenyl ketone, nitrate (Reddlien) 3247.
Mesobilirubin (Fischer) 3257.
Mesobilirubinogen (Fischer) 3257.
Meso-silico-oxalic acid, constitution (Martin) 2848; action of alkalies and water on (Martin) 2888.
Mesothorium, working mixts. contg. (Ebler) P 1150; γ-ray measurements with, compds. (Meyer) 2186; (Kithil) 2862; see also *Thorium.*
Mesothorium salts (Ebler) P 1718.
Metabisulfites, extinction measurements of (Garrett) 3165.
Metabolism, animal, after administering phenylacetic acid (Thierfelder) 86; of castrated animals (Vita) 96; of lecithin and choline (Patta) 477; boroformic acid as catalyzer in (Kothner) 635; of atrophic infant (Bahrdt) 647; uric acid (Raizisz) 816 (Benedict) 1634; in paralysis (Diller) 817; of urticaria (Rosenbloom) 927, 2664; alc. in (Votz) 937; influence on, of thyroid gland and of anterior lobe of pituitary (Hewitt) 1072; fatty acid, in liver—fatty acid infiltration of liver during pregnancy and lactation (Coope) 1073; of salivary gland (Wolf) 1074; energy (Murlin) 1191; in beriberi (Braddon) 1192; reproductive and thyroid glands and (Korentchewsky) 1192; factors affecting basal (Benedict) 1496; of athletes (Benedict) 1496; basal, of normal men and women (Benedict) 1496 (Gephart) 1794; of vegetarians and of non-vegetarians (Benedict) 1496; of white races in tropics (Young) 1498; hemoglobin pigment (Addis) 1630; in congenital hemolytic jaundice with splenomegaly (McKelvey) 1635; in obesity and pituitary disease (Means) 1635; in exptl. diabetes (Moorhouse) 1800; quinine and (Silberstein) 1940; influence of bathing in Great Salt Lake (Mattill) 1943; basal, and body surface (Means) 2261; effect of functional activity on (Barcroft) 2264; relation between creatine and creatinine in autolyzing tissue (Myers) 2662; of infant on art. food (Hellensen) 2663; pathological, in parental organism and defective offspring (Werber) 2664; glycogen and starch as intermediate products in, of organisms (Waterman) 2775; quant. relation between temp. and standard (Krogh) 2926; diazo reaction of dog urine—relation to course of (Masslov) 2928; before and after splenectomy in congenital hemolytic icterus (Goldschmidt) 2929, in psychoses (Togami) 2930; in dog before and after removal of spleen (Goldschmidt) 2936; surface tension as factor controlling cell (Cramer) 3069; energy transformations during horizontal walking (Benedict) 3087; influence of electricity on (Steel) 3101; osteitis deformans (DaCosta) 3277; in diabetes insipidus (Rosenbloom) 3278; see also *Excretion; Nutrition.*
Metabolism, amino acid, rate of, of ingested glycocoll and alanine (Csonka) 1630; (Lombroso) 2104, 3274; (Arton) 3273; rate of (Janney) 2927.
Metabolism, calcium, in hyperchlorhydria (Secchi) 477; Ca balance as control of (Schoorl) 642; in joint diseases (Lindemann) 646; phospho-nuclease as related to (Bergeim) 3276.
Metabolism, carbohydrate, lactose and, of infants (Talbot) 96; suprarenal capsules and (Wacker) 650; phlorhizin and sugar (Galambos) 820; metabolic relationship of proteins to glucose (Janney) 1497, 2927; influence of hydrazine on utilization of dextrose and on glycolase activity of liver (Underhill) 1508; lactic acid and (von Furth) 1801; cholesterol, adrenals and (Landau) 222; suprarenal capsules and (Wacker) 650; (McKelvie) 933; (Rothschild) (Soper) 2397; physiology of (Rothschild) 1191, 1192; of hen egg during incubation (Mueller) 1802.
Metabolism, creatine (Scaffidi) 3271.
Metabolism, creatinine (Myers) 2262; relation between creatine and creatinine in autolyzing tissue (Myers) 2662; (Scaffidi) 3271.

Metabolism, fat, in diseases of pancreas (Crohn) 1639; fatty acid, in liver (Cooper) 2932; of cell (Much) 3286.

Metabolism, gas, of gymnasts (Peltret) 816; body surface of flounders and (Margulis) 1791; effect of drugs on (Higgins) 2670; effect of mechanical conditions on, of mammalian heart (Evans) 2776; influence of vagus nerve on, of kidney (Pearce) 3089; effect of drugs on (Higgins) 3099; of active muscles (Mettenleiter) 3281.

Metabolism, magnesium, in hyperchlorhydria (Secchi) 477.

Metabolism, nitrogen (Mosenthal) 333; before and after splenectomy in pernicious anemia (Minot) 482; of resting salivary gland (Wolf) 1074; in dermatoses (Tidy) 1199; in diseases of pancreas (Crohn) 1639; of man when ingesting successively non-protein and normal diet after 7-day fast (Zeman) 3088; influence on, of Na glycerophosphate (Montuschi) 3296; of molds (Brenner) 3269.

Metabolism, phosphorus (Heubner) 644; P compds. in animal (Forbes) 1072; of lambs fed alfalfa hay, corn and linseed meal (Ross) 2774; phospho-nuclease as related to (Bergeim) 3276.

Metabolism, plant, of bacilli in various media (Kendall) 215; acid and alk. and (Dachnowski) 331; of *A. niger*, yeast and potato (Waterman) 476; absorption of lipocolloids (Czapek) (Krehan) 2102; see also *Plants*.

Metabolism, protein, in pancreatic diabetes (Galambos) 96; excessive water ingestion and (Orr) 646; of white races in tropics (Young) 1498; readily extractable P and adequacy of (Jakouchkine) 2418; rate of (Janney) 2927; in fever and during work (Kocher) 2928; in repeated hemorrhage (Taylor) 2929; infant,—protein milk (Courtney) 3273.

Metabolism, purine, internal secretions and (Fleischmann) 95; of rats (Ackroyd) 96; in pathol. conditions (Lindemann) 645; hydroxyquinoline and (Boenheim) 657; action of oxycholine derivs. on (Burgsch) 2778.

Metabolism, respiratory, effect of strychnine, etc., on (Edsall) 336; CO_2 output in industrial work (Becker) 816; during mental work (Becker) 816; action of NaCl, acids and alkalies on (Raeder) 1807; influence of Na_2CO_3 on, of depancreatized dogs (Kramer) 3091.

Metacrolein, heat of formation of (Voisenet) 1575.

Metahewettite (Hillebrand) 281. .int

Metal-ammonia compounds, chromisalicylic acid and its ammoniacal derivs. (Barbieri) 2849.

Metal borings, sepn. of white metal and gun- (Walton) 1450.

Metal compounds, volatile (Wartenberg) 571.

Metal foil, alloy for (McAdams) P 288; effect of edges of, on transparency to radioactive emanations (Imhof) 552; electrons from, under Röntgen radiation (Hoepner) 1715; for imprinting (Gubinol-Ges.) P 2442.

Metallic clouds (Lorenz) 1565, 2490, 3002; slag contg. Mn (Lorenz) 2474; (Nieuwenburg) 3159.

Metallic filament lamps. See *Lighting, electric (filament lamps)*.

Metallic hydroxides, oxides, salts, etc. See *Hydroxides; Oxides; Salts*, etc.

Metallic state, theory of (Lindemann) 753.

Metallization (Morcom) 49; Schoop process (Vezoul) 587; of porcelain (Marino) 1676.

Metallography of German silver (Thompson) 433; and microscopic exam. of ores (Granigg) 902; appliances for research (Rosenhain) 1594; Einführing in, und Wärme-behandlung (Hanemann, book) 1742; light filters with Tassin app. (Getman) 1892; (LeChatelier) 1892; of Cu (Campbell) 3200; in investigation of ores (Granigg) 3195; (Bakker) 3200; standard methods for metallographic tests of metals 3202; and hardening of steel (Sauveur) 3208.

Metalloids, progress in analytical chemistry of, in 1914 (Gutbier) 3040; recognition and estn. in org. compds. (Mandel) 3043.

Metallopyrophosphoric acids, salts (Rosenheim) 2195.

Metallurgy, smelting Ray concentrates (Vail) 47; Smelter Construction and Costs (Jones, book) 49; analysis (Massinon) 184; Plymouth mill (Caetani) 192; continuous decantation (Simmons) 192; mill and smelter construction in 1914 284; rept. of Selby Smelter Comm. (Gould) 284; (Megraw) 284; war and metal inds. (White) 284; An Introduction to Physical Metallurgy (Rosenhain, book) 287; (Wysor, book) 287; by-product recovery from producer gas in (Gwiggner) 521; hydro- (Dorr) 585; Hall desulfurization process (Wierum) 776; Coolidge tube in research (Davey) 780; treating sulfurous fumes (Martin) 905; Metallurgical Plants (Nagel, book) 956; coal dust as fuel (Amberg) 961; continuous malleable cupola practice (Gilmore) 1023; progress on Witwatersrand (Stanley) 1023 (Basqui) 1737; metals and metallic ores in 1912–13 (Dunlop) 1024; Handbook of Milling Details (book) 1026; Mechanical Appliances of Chem. and Metallurgical Inds. (Nagel, book) 1137; in Porcupine district (Cunningham) 1164; smoke (Fulton) 1164; high blast heats (Mathesius) 1164; Mansfeld smeltery (Franke) 1165; Knight-Christensen process (Spaulding) 1165; Talbot and other open-hearth processes 1293; refractory hollow bodies for (Jarstzka) 1379; leaching and acid plants (Mathewson) 1452; recent Rand, practice (Murray) 1594; Analysis (White, book) 1731; of low-grade and complex ores (Lyon)

Methylene iodide, new prep. (Tishchenko) 1749.
Methylenequinones (Pummerer) 316.
Methylephedrine, derivs. (Schmidt) 2234.
Methyl ether. See *Dimethyl ether.*
Methylethylbromoacetic acid (Gadamer) 622.
1 - Methyl - 1 - ethyl - 2 - cyano - 3,5 - diketocyclohexane-6-carboxylic acid, Et ester (Scheiber) 1183.
1 - Methyl - 4 - ethyl - 1,3 - cyclohexadiene - 3-carboxylic acid (v. Auwers) 3237.
Methyl ethyleneallophanate, retention in phlorhizin diabetes (Nitsche) 1076.
Methylethylhydroxyacetic acid and Zn salt (Gadamer) 622.
Methylethylisoamylcyclohexylmethane (Halse) 3232.
***N* - Methyl - 1 - ethyl - 4 - methylberberinal** and -MeCl (Freund) 2874.
Methylethylpropyl - 4 - acetaminophenyl - ammonium iodide and derivs. (Meldola) 2226.
Methylethyl propylcyclohexylmethane (Halse) 3232.
Methylethylpyroracemic acid, fermentation (Neuberg) 472.
α-Methyl-β-ethylpyrrole and picrate (Piloty) 457.
α - Methyl - β - ethylpyrrole - β' - carbeny - ethyl-α'-carboxylic acid (Piloty) 457.
α - Methyl - β - ethylpyrrole - β' - carboxylic acid and Et ester (Piloty) 457.
α - Methyl - β - ethylpyrrole - α',β' - dicarboxylic acid (Piloty) 457.
Methylethylpyruvic acid, decomp. of *dl*- (Neuberg) 3058.
6-Methyl-3-ethyltetrahydropyridazine and derivs. (Wohlgemuth) 1602.
Methylethylthienylethylene and dimer (Domracheva) 1754.
Methylformamidinethiolacetic acid, -HCl (Rây) 63.
1 - Methyl - 2 - formylamine - 4 - ethanoyl - cyclohexane and derivs. (Harries) 2879.
Methylglucose (Denham) 203.
Methyl glucoside, esters with H_3PO_4 (Fischer) 801; prep. of α- (Aubry) 1048.
Methylglucosidephosphoric acids, salts of (Fischer) 802; Ueber Phosphorsäureester des Methylglucosids und Theophyllinglucosids (Fischer, book) 1919.
Methylglycocoll, effect on plants (Schreiner) 2261.
Methylglycocyamidine (Bayer & Co.) P 1830.
Methylglyoxal, formation (Neuberg) 3058; color reactions of trioses and (Neuberg) 3080.
Methyl group, oxidation of, in open-chain unsatd. compds. (Merezhkovskii) 1903.
Methyl halides (Anilin-Fab.) P 1829.
Methylheptanol and derivs. (Wallach) 1458.
Methylheptanone, products of (Wallach) 1458.
Methylhexamethylenetetramine thiocyanate (Schmitz) P 1669.
Methylhexamethylenetetrammonium salts (Schmitz) P 1370.
Methylhexamethylenetetrammonium thiocyanate (Schmitz) P 1369.
Methylhomovanillin and derivs. (Harries) 1053.
Methylhydantoin, *l*- (Dakin) 1906; (Baumann) 2644.
3 - Methyl - 3 - hydrazine - 3,4 - dihydrobenzoxazone (Heller) 2545.
β-Methylhydrindene (Kizhner) 2066.
β-Methyl-α-hydrindol (Kizhner) 2066.
2-Methyl-β-hydrindone, synthesis of, and derivs. (Kizhner) 2066.
3 - Methyl - 4-β - hydroxybenzeneazophenylmercuric acetate (Jacobs) 1610.
Methyl-2-hydroxy-1-dibenzylmethanolbenzene, 3- and 5- (Berlitzer) 1466.
Methyl - 2 - hydroxy - 1 - diethylmethanol - benzene, 3- and 5- (Berlitzer) 1466.
Methyl - 2 - hydroxy - 1 - [di - α - naphthyl - methanol] benzene, 3- and 5- (Berlitzer) 1466.
β - Methyl - γ - hydroxy - γ - diphenylbutyric acid (de Fazi) 3065.
Methyl - 2 - hydroxy - 1 - [diphenylmethanol] benzene, 3- and 5- (Berlitzer) 1466.

Digitized by Google

Methyl - 2 - hydroxy - 1-[dipropylmethanol]-benzene, 3- and 5- (Berlitzer) 1466.
Methyl - 2 - hydroxy - 1 - [1 - ethyl - 1 - propene] benzene, 3- and 5- (Berlitzer) 1466.
β - Methyl - β - hydroxy - α - hydrindone and semicarbazone (Kizhner) 2066.
Methyl - 2 - hydroxy - 1 - [1 - propyl - 1 - butene] benzene, 3- and 5- (Berlitzer) 1466.
6-Methylhydroxyquinolyl methyl ketone (Kaufmann) P 2423.
Methylindole, derivs. contg. S (Madelung) 2253.
2-Methylindole-3-aldehyde, oxime (Angeli) 1322.
2-Methylindole-α-benzoylaminoacrylic acid (Ellinger) 462.
α-Methylindone and derivs. (Stoermer) 1758.
Methyl iodide, reactions with NaOEt (Robertson) 2343.
***N*-Methylisatoxime**, Me ether (Borsche) 309.
Methylisoamylbenzylamine and -HCl (Ishizaka) 77.
Methylisobebeerine and derivs. (Scholtz) 2080.
Methylisobebeerinemethine, α- and β-, and salts (Scholtz) 2080.
Methylisopicramic acid (Meldola) 197.
Methylisopropylbutylenecarbinol (Wallach) 1458.
1 - Methyl - 4 - isopropyl - 1,3 - cyclohexa - diene - 3 - carboxylic acid and derivs. (v. Auwers) 3237.
***l*-*N*-Methylleucine** and salts (Fischer) 1484.
Methylmagnesium iodide, detg. active H in org. compds. by (Zerevitinov) 75.
2 - Methylmercapto - 4 - amino - 6 - methoxypyrimidine (Johns) 912.
1 - Methyl - 2 - mercapto - 4 - amino - 6 - oxypyrimidine and NO deriv. (Johns) 912.
***o*-Methylmercaptobenzonitrile** (Zincke) 2649.
1 - Methylmercapto - 2,4 - di[carboxymethylmercapto]benzene (Wienerberger) 910.
1 - Methylmercapto - 2, 4 - dimercaptobenzene and derivs. (Wienerberger) 910.
α-Methylmercaptodiphenylacetic acid, Me ester (Becker) 627.
2 - Methylmercapto - 4 - methyl - 6 - alloxypyrimidine (Johnson) 1066.
2 - Methylmercapto - 6 - oxy - 4 - aldehydopyrimidine, diethylacetal (Johnson) 2656.
[2 - Methylmercaptophenyl]trimethylammonium iodide and derivs. (Zincke) 2650.
1 - Methyl - 4 - [2 - methoxy - 5 - amino - benzyl]hydantoin, -HCl (Johnson) 2529.
1 - Methyl - 4 - [2 - methoxy - 5 - nitrobenzal] hydantoin (Johnson) 2529.
***N* - Methyl - α - methyl - β - acetopiperidine** and derivs. (Lipp) 1759.
2 - Methyl - 4 - methylene - 1,4 - α - naphthapyranol and derivs. (Ghosh) 2516.
***N*-Methyl-*C*-methylethylglycine** and derivs. (Immendörfer) 1913.
***N*-Methyl-*C*-methylethylhippuric acid** and derivs. (Immendörfer) 1913.
***N* - Methyl - *C* - methylethylhippurylmalonic acid**, di-Me ester (Immendörfer) 1913.
1 - Methyl - 2 - methylethyl - 5 - phenylpyrrolone and salts (Immendörfer) 1914.
1 - Methyl - 2 - methylmercapto - 4,5 - diamino-6-oxypyrimidine (Johns) 912.
1 - Methyl - 2 - methylmercapto - 6,8 - dioxypurine (Johns) 912.
***N* - Methyl - α - methyl - β - piperylmethylalkine** and derivs. (Lipp) 1759.
Methyl-β,β-naphthindasole (Witt) 803.
***peri*-Methylnaphthoic acid** and lactone (Errera) 447.
Methylnaphthyl triphenylcarbinyl ether (Pummerer) 317.
6 - Methylnitramino - 3,5 - dinitropseudocumene (Huender) 1762.
4-Methyl-*o*-nitrobenzalcoumaranone (Stoermer) 1055.
2-Methyl-4-nitrocinnamic acid (Hartwig) 1174.
1 - Methyl - 4 - [3 - nitro - 4 - hydroxybenzyl]-hydantoin and 1,3-dimethyl compd. (Johnson) 2530.
2 - Methyl - 5 - nitrophenyl - 1 - arsonic acid (Karrer) 1333.
***p* - Methylnitrosoaminophenylmercuric acetate** (Jacobs) 1610.
1,1-Methylnitrotetramethylene (Rozanov) 2508.
α,β-Methylnitrourea (Backer) 2383.
Methylnopinone and semicarbazone (Kötz) 208.
Methyloctanonal and derivs. (Harries) 2878.
1 - Methyl - 4 - oximino - 3 - cyclohexanone, Bz deriv. (Kötz) 621.
***N*-Methylpavinemethine** and derivs. (Pyman) 1310–11.
Methylpentosans, estn. of (Cunningham) 214.
Methylpentoses, detg., in wine (Schaffer) 1364.
***p*-Methylphenacyl bromide** and iodide, and derivs. (Jacobs) 2077.
***o*-Methylphenoxyethylamine** (Jacobs) 2075.
***m*-Methylphenoxyethyl bromide** and deriv. (Jacobs) 2076.
***m*-Methylphenylacetaldehyde** (Späth) 1301.
o - Methylphenylacetoketodihydrobenzmatoxazine (Ekely) 1065.
***N*-Methylphenylalanine**, *d*- and *l*-, and -HCl (Fischer) 1484.
1 - Methylphenyl - 4 - allylthiosemicarbazine (Blanksma) 1614.
1 - Methylphenyl - 4 - *d* - *sec* - butylthiosemicarbazine (Blanksma) 1614.
β,β-Methylphenylcholine chloride and salts (Menge) 296.
1 - Methyl - 1 - phenyl - 2 - cyano - 3,5 - diketocyclohexane - 6 - carboxylic acid, Et ester (Scheiber) 1183.
1 - [*o* - Methylphenyl] - 1,2 - diethoxyethane (Späth) 1301.
1 - [*p* - Methylphenyl]1,2 - dihydroxyethane (Späth) 1301.

Mineral oils. See *Petroleum.*

Minerals, formation of deposits (Launay) 43; Rand banket (Horwood) 44; Ind. (Rousch, book) 46; luminescence of (Michel) 166; radioactivity of, of Sardinia (Francesconi) 175; calcn. and comparison of analyses (Van Orstrand) 186; CO_2 in, of scapolite group (Borgström) 189; pressure and percussion figures on micaceous (Wetzel) 281; Deposits of the Useful, their Origin, Form and Content (Beyschlag, book) 284; Search for and the Detn. of the Useful Minerals (McLeod, book) 284; of Yakataga district, Alaska (Maddren) 426; Skomer volcanic series (Thomas) 428; CO_2 in (Borgström) 573; combination of extremely fusible with extremely refractory components—genesis (Niggli) 574; associations at Butte, Mont. (Bard) 580; graphic petrography (Adams) 581; crystallog. study of, from Latium (Rosati) 773; main zone of Santa Eulalia (Prescott) 902; and mining inds. of Canada, 1021; rate of reduction of acidity of descending waters by ore and gang (Nishihara) 1021; Algerian (Azéma) 1160; electromagnetic sepn. (Tolentino) 1164; m. ps. (Day) 1288; classification of sulfo-salt (Kraus) 1289; from Nisiro (Aegean sea) (Grill) 1290; of Rochester mining district, Nevada (Schrader) 1290; analysis of (Schoeller) 1441; laws of formation and transformation of (Fersmann) 1445; compn. of Russian (Nenadkevich) 1446; inclusions in south Styrian basalt tuffs and their (Schadler) 1448; radioactivity of (Bamberger) 1716; "genno-ishi" (Hiki) 1889; Die Lagerstätten der nutzbaren Mineralien und Gesteine, nach Form, Inhalt und Entstehung dargestellt (Beyschlag, Krusch, Vogt, book) 1891; heat transformation of polymorphic (Laschenko) 2045; chem. compn. (Zambonini) 2207; in meteorites (Merrill) 2208; detection and estn. (Atmos) P 2333; m. and b. ps. of metalloid-sulfide, selenide and telluride (Borgström) 2364; Philippine (Smith) 2495; analyses from lab. of U. S. Geol. Survey, 1880–1914 (Clarke) 2632; arrangement according to occurrence (Wherry) 2749; Canadian (Johnston) 2749; synthesis (Mourelo) 2749; radioactive, in eastern Canada (Robinson) 2751; radioactive, in Ontario (Brunton) 2751; recent discoveries in Namaqualand (Versfeld) 2752; in Styria and Lower Austria (Sigmund) 2857; of tufa of Iserain, Campobasso (Quercigh) 2857; of Elisavetgrad district (Grishchinskii) 2858; Determinative Mineralogy (Lewis, book) 2864; Mineralsynthetisches Praktikum (Dittler, book) 2864; chem. and phys. properties—coeff. of expansion (Schulz) 3045; resources of Texas (Phillips) 3046; detn. of da. at high temps. (Day) 3190; new deposit of, in Brazil (Arlt) 3191; Die Gesteinbildenden Mineralien (Weinschenk, book) 3346.

Minerals, new, searlesite (Larsen) 43; bilinite (Sebor) 190; minasragrite, fernandinite, shattuckite, bisbeeite (Schaller) 426; pintadoite, uvanite (Hess) 426; imerinite (Lacroix) 2365; natrodavynite (Zambonini) 774; farutsihite (Lacroix) 1289; northfieldite (Kunz-

son) 2634; (Schwantke) 3045; (Koechlin) 3191.

Mineral salts. See *Salts.*

Mineral waters. See *Waters, natural.*

Mines, detecting dangerous atms. in (Schaull) P 4 (Schoeller & Co.) P 2983; CO in (Harger) 241, 1288; destroying gases and dust in (Alderson) P 697; explosives in coal, 1247; preventing explosions in (Kempermann) P 1249 (Cremer) P 1845; gases (Haas) 1450; motors for (Clark) 2312; explosive gases in coal (Darton) 2982; dust in air (Moir) 3290; detection of gases in (Siemens) P 3314.

Mining salt (Bradley) P 358; minerals and, inds. of Canada, 1021; microscope in (Apgar) 1732; Costs of the World (Skinner, Plate, book) 2869; Handbook on Physics and Chemistry of, and Mine Ventilation (Walsh, book) 3213.

Minium. See *Lead oxide.*

Mint, essential oil of Argentine (Doering) 691.

Mirbane. See *Nitrobensene.*

Mirror condenser, examg. varnish with (Pooth) 2600.

Mirrors, coating (Declère) P 398; silvering (Lenk) 695; manuf. (P. M.) 2973.

Mixed crystals in systems formed by $SrCl_2$, $BaCl_2$, and NaCl or KCl (Vortisch) 182; and theory of allotropy (Smits) 1266; metastable continuation of, line (Smits) 1423; formation of isomorphous, between CoO and MnO and between CoO and NiO (Hedvall) 3039.

Mixer (Nagel) 1137; metal (Thompson) 2635. *Patents:* (Gaspary & Co.) (Higgins) 4; (Mewes) 5; for emulsions (Schröder) 5; for asphalt (Guelich) 147; ore with cyanide solns. (Crerar) 195; maintaining const. height in, for liquids (Botz) 259; for liquids and gases (Noll) 260; ore (Callow) 591; for rubber (Gray) 732 (Kempter) 1860; for sludge, etc. (Polysius) 733; for gases (Osthoff) 733; for air and gas (Ionides) 962; for clay (Maschinenfab. Roscher) 1104; for heated asphalt with aggregate (Bledsoe) 1541; for cement and fibrous asbestos (Nesetril) 1680; for tar macadam (Taylor) 1680; (Stein u. Ton-Ind.-Ges.) 1707; charging rotary (Stein-u. Ton.-Ind.-Ges.) 1707; for coke ash and wash water from coal (Mack) 1841; for gases, vapors, or liquids (Hartung) 2010; for gums (Kempter) 2164; for use in hydrogenating oils (Calvert) 2323; flue dust with molten Fe, Cu mat, etc. (Baggaley) 2726; for making white lead (Barton) 2819.

Mixing, efficiency, 539; pptg. agents with cyanide solns. (Mills) P 590; (Goldman) P 1228; cement-sand plaster (Weber) P 1680; duration of, and strength of concrete (Scofield) 2137; liquids proportionally (Bramwell) P 2435; powd. fuel with air (Doherty) P 2447; slime (Polysius) P 2506; of copra (Annison) P 3108; liquids, powders, etc. (Janensch) P 3338.

Mobility, influence of CO group on, of Cl atoms (Maron) 307; of cations (Heydweiller) 1417; of ions in air (Wellisch) 1710; of HCO_3' ion at 18° (d'Agostino) 3061; of HCO_3' ion at 37° (Quagliariello) 3062; see also *Transference numbers.*

Mobilization of metals (Tzentnershver) 2833.

Moellons, analysis (Faust) 730, 1703; (Bumcke) 2995.

Moistening dust and fine powders (Ehrenberg) 1142; dextrin (Wulkan) P 1855; yarns (Schilde) P 2152; copra (Annison) P 3108.

Moisture. See *Steam; Water; Water vapor.*

Molasses, acid components of, from beet roots (Moreschi) 616; prepg. yeast for fermentation of (Molhant) P 691; distn. of—fermentation of (Owen) 840; N of (Abonyi) 868; using (Peck) 869; Russian (Minz) 976; yield of alc. from (Owen) 1365; as source of alc. (Heriot) 1825; fermented, as source of N and potash fertilizers (Vita) 2121; fermentation of (Miroir) 2124; (McGill) 2720; analyses of, from Bulgarian sugar factories (Manzoff) 3375; see also *Sugar industry;* for analysis see *Sugar, analysis.*

Molassine meal (Lindsey) 1355.

Molded articles, forming (Fairfax) P 516; from wood fiber (Jirotka) P 1980; (Baekeland) P 2432.

Molding rubber articles (McLeod) P 164 (Cigol) P 1704; sand (Schmid) 430; cold-, phenol condensation products (Hemming) P 731; rubber reinforced with steel wool (Crane) P 2823; Albany, sand (Newland) 3213.

Molds (I), ingot (Williams) 47 (Gathmann) P 51, 1599 (Peyton) (Hitt) P 1600; joining metal parts in (Morosi) P 52; filling (Lichtenberger) P 517; heating powdered glass in, 699; binder for cores (Roy) P 781; for cement or concrete (Schmidt) (Goodwin) P 1237; adjustable top for ingot (Kenney) P 1455; for brass cartridges (Ceron) 1596; drying (Böcking & Cie) P 1896 (Davidson) P 2140; preserving gypsum (Haase) P 1980; metal (Reichardt) P 2377; glass melting pots (Wagner) P 2579; for casting steel ingots (Sheldon) P 3216; drying oven for (Calow) P 3218.

Molds (II), blue, in tobacco (Smith) 348; alc. as nutriment for (Baudrexel) 471; and nitrates (Kossowicz) 641; assimilation of C and N compds. by (Kossowicz) 641; org. constituents of culture soln. and mycelium of molds from soil (Sullivan) 835; in butter (Thom) 942; destruction of (Bickel) P 950; fixation of N by (Kossowicz) 1070; of cigars (True) 1070; deterioration of canvas due to (Guegen) 1693; injections of spores (Blakeslee) 1936; action on alkaloid in opium (Friedrichs) 1968; detecting enzymes or zymogenes in (Henneberg) 2903; toxin in juice expressed from *Rhizopus nigricans* (Blakeslee) 3086; N metabolism of (Brenner) 3269.

Molecular action, mechanism of (Sutton) 1143.
Molecular association (Turner, book) 1714; of liquids (Tyrer) 993 (Garver) 2179.
Molecular attraction (Järvinen) 5; (Mills) 1561.
Molecular combinations, of amines (Kochubei) 1898.
Molecular complexity, at fusion point (Tsakalotos) 399; detg., of liquids (Turner) 399; of acetic acid (Bennett) 1571.
Molecular compounds of inorg. halides (Rosenheim) 1773.
Molecular conductance. See *Conductance.*
Molecular constants of isomeric compds. (Pochettino) 548.
Molecular constitution, pressure displacement of spectral lines and (Livens) 18; and magnetic susceptibility (Oxley) 1426, 1713.
Molecular distances, correction of Curie-Langevin law of magnetization for (Holm) 2484.
Molecular field in diamagnetic substances (Oxley) 1426, 1713.
Molecular force field theory (Baly) 1271.
Molecular forces (Lenard) 2174.
Molecular layers, soln. velocity of (Hevesy) 1417.
Molecular migration. See *Rearrangements.*
Molecular rearrangements. See *Rearrangements.*
Molecular refraction. See *Refraction.*
Molecular state of silicate fusions (Boeke) 1141; of mixed liquids (Atkins) 2728; of salts in soln. (Turner) 3154.
Molecular structure, quanten theory and (Goldhammer) 17; of binary mixts. (Tammann) 875; of alum (Terada) 876; of kaolinite (Mellor) 1102; of solid isotropic and anisotropic binary mixts. (Tammann) 1563.
Molecular transpositions. See *Rearrangements.*
Molecular volume, unit-stere theory of (Le Bas) (Vanstone) 261; mol. soln. vols. of cinchonicine and borneol (Peacock) 749.
Molecular weight, app. (Turner) 543; of acetone in CCl_4 and $CHCl_3$ (Beckmann) 746; data for, detn. (Ewald) 997; influence of temp. and solvent on, of dissolved substances (Beckmann) 1570; of acids with double m. ps. (Tollens) 1776; interpretation of, results from measurements on solns. (Turner) 2613; mol. diam. and (Herz) 3000; variation of cryoscopic const. with mol. wt. of solvent (Guzman Carrancio) 3157.
Molecules, Mol. Physics (Crowther, book) 18; attraction of cohesion and of gravitation of (Mathews) 400; dimensions (Lear) 400; formulas (Turner) 400; reactions (Schroder) 544 (Robertson) 2018 (Marshall) 3155; distribution of, of gas in field of force (Richardson) 881; Molecules, atomes et notations chimiques (book) 886; gyroscopic theory of (Crehore) 1005; mol. gage (Dushman) 1413; *C* (Della-Groce) 1414; molecular magnitude of metals in solid phase (Padoa) 1420; relative dimensions of (Rankine) 1566; $C(NO_2)_4$ as reagent for structure of (Filipov) 1901; dissoc. of electrolytes as a function of the neutral (Szyszkowski) 2014; undissoc., in ester catalysis (Ramstedt) 2019; stability of (Ephraim) 2195; Thomson's theory of, applied to structural chem. (Szyszkowski) 2012; hydrated and complex, in non-associated solvents (Szyszkowski) 2014, 2015; mol. resistance encountered by plate moving in gas (Knutsen) 2023; complex (Lenard) 2174; radiation of gas, excited by light (Wood) 2186; catalysis and (Robertson) 2343; enantiomorphism of mol. structure (Barlow) 2473; detg. law of reflexion of gas (Wood) 2730; ionization and radiation of gas, due to collisions with electrons (Nesturch) 2730; Probleme komplexer Molekule (Lenard, book) 2836; mol. diam. and mol. wt. (Herz) 3000; number of oscillations in mol. vibratory motion of solids (Pagliani) 3016; frequency of mol. vibratory motion in solids (Pagliani) 3017; scattering and regular reflection of light by gas (Burton) 3020; cond. of, of iodoanilinesulfonic acids (Boyle) 3155; Debye's theory of mol. dipoles (Rubens) 3164.
Molluscs, storing and treating (Nigg) P 1206.
Molybdenite, in Aare granite (Koenigsberger) 42; in New South Wales, 1448.
Molybdenum and corrodibility of steel (Friend) 49; vapor pressure (Langmuir) 263; cleaning and thinning, filaments (Burgstaller) P 894; in 1913 (Hess) 905; compressibility of (Richards) 983; compressing mixt. of W and (Leiser) P 1895; standardizing solns. (Taylor) 2258; at. wt. (Müller) 2613; imparting properties of fused, to unfused (Leiser) P 3178.
Molybdenum, analysis, sepn. from W (Marbaker) 422; (Browning) 3041.
Molybdenum cyanides (Rosenheim) 2743.
Molybdenum oxides, MoO_3 (Robertson) P 130, 1375; magnetizability of (Wedekind) 1268; Mo_2O_3 and salts (Mawrow) 2359.
Molybdic acid, cryoscopic studies of (Mazzucchelli) 544; recovery of (Brown) 898 (Armstrong) 2746; photochem. action of solns. (Casolari) 1326; catalytic reduction of (Paal) 1883.
Molybdic acid arsenates, unsatd. (Rosenheim) 3039.
Molybdic acid phosphates, unsatd. (Rosenheim) 3039.
Molybdosodalite (Zambonini) 774.
Monazite concg. (Freise) 429; (Buss) 1160; sands of Travancore, 1291; Brazilian (Gottschalk) 1732; (Uhlig) 2046; occurrences (Tipper) 2751; in sand and gravel of southern Somalia (Artini) 2860; (Kithil) 2862.
Monchiquite (Artini) 583.
Monel metal. See *Nickel alloys.*
Monkey, mineral excretion of (Baumann) 2927.
Monoamino acids. See *Amino acids.*

Monochromatics (Volkmann) 2029.
Monochromators (Leiss) 2330.
Monosaccharides, assimilation in ovariectomized dogs (Artom) 926; detection of reducing (Welker) 2660.
Monotropy, metastable continuation of fusion line and mixed crystal line and (Smits) 1423.
Monzonite (Watt) 428; Coeur D'Alene, and other plutonic rocks of Idaho (Stewart) 582.
"Moor colonial oat sickness" (Hudig) 1217.
Mordanting, monoazo dyes (Geigy) P 1847; furs (Casella) P 3367.
Mordants, Zr (Wengraf) 381.
Morin derivatives (Perkin) 1312.
Morinite, ternary fluophosphates of (Slavik) 1160.
Morphine, action on intestine (Zunz) 336; other alkaloids of opium and action of (Meissner) 662; detection of oxymorphine in presence of (Grimbert) 1224; detg., in opium (Thomsen) 1368; alkoxymethyl ethers of (Mannich) 1660, P 1975; as analgesic in obstetrics and surgery (Bertrand) 1663; stability of, in presence of putrefaction (Doepmann) 1663; and anhydro deriv. (Freund) 1777; absence from liver in chronic laudanum addiction (Rosenbloom) 1941; in cadaver (Grutterink) 2041; quant. relationship between brain lipoids in dog accustomed to (Biberfeld) 2945.
Morphine acetate (Engelhardt) 1531.
Morphine alkaloids, action of Ac_2O on (Tiffeneau) 1912, 1747.
Morphine derivatives, pharmacology of (Pitini) 1076.
Morphine nitrate (Engelhardt) 1531.
Morphology of *Mycoderma vini* (Perotti) 1796.
Morphothebaine dimethyl ether and *d*-ditartrate (Klee) 299, 300.
Morphotropy of crystd. Et sulfates of rare earths (Jaeger) 990; and topic parameters (Barlow) 2473.
Mortar, effects of alk. and acid solns. on, 139; fine earth in (Benson) 139; dry (Mörtelwerk Jolit) P 141; trass additions to cement and lime (Martin) 239; strength of lime (Emley) 1381; compn. of port. cement, in sea-water (Giorgis) 1679; effect of fineness of sand, clay and loam on strength of (Roman) 2137; decompn. of cement, by water (Chem. Lab. f. Tonind.) 2444; treating (Anker) P 2581; Schwellung und Schwindung von Zement und Zement-moerteln in Wasser und Luft (Gary, book) 3346.
Mosaic disease, of tobacco (Allard) 1190.
Mosaics (Gianotti) P 1235; glazing (Huth) 2135.
Moss, distn. of (Plauson) P 523; coloring matter of tree (Edge) 1693.
Mother-of-pearl, art. (Claessen) P 1377, 2435; imitating on glass (Mauvillin) P 2806.
Moths, protecting furs, etc., from (Aniline-Fab.) P 2802.
Motion, unordered (Przibram) 16; of Liquids (Villamil, book) 886; similarity of, in relation to surface friction of fluids (Stanton) 1568; number of oscillations in mol. vibratory, of solids (Pagliani) 3016; calcn. of frequency of mol. vibratory, in solids (Pagliani) 3017.
Motors, benzine substitutes for (Donath) 523 (Gerber) 710 (Meneghini) 1244, 1993; spirit (Hall) P 1244, 1840; fuels (Lewes) 1244, 2707; peroxidized kerosene as fuel for 1245; waste heat from combustion (Golz) 1989; cylinder lubrication (Bryan) 2147; explosion-proof elec., for mines (Clark) 2312; see also *Engine*.
Mouth, relations of oral microörganisms to dental caries (Gies) (Kligler) 3094; metals used in (Hepburn) 3300; bacteria of, and their relation to systemic disease (Stewart) 3291.
Moving bodies, electron theory and electrodynamics of (Born) 1580.
Moyashi (Takamine) P 2563.
Mucilage (Kelly) P 849; substitute (Berger) 2290; from seaweed (Gloess) P 2801; see also *Adhesives*.
Mucins, stain for (Berman) 3079.
Mucoids, stain for (Berman) 3079.
Mucous membrane, reflexes from intestinal, to stomach (Brunemeier) 1803; excretion of Hg by gastric (Lieb) 2673; amino acid contd. in intestinal (Lombroso) 3274.
Mucus in cream (Stören) 2950.
Mud from Columbus Marsh, Nevada (Hicks) 1163; estg. vol. of solid matter in (Coleman) 1441.
Muffles (Juretzka) 1379; setting wall tile in (R. P.) 3342.
Mugearite (Thomas) 428.
Mulberry, comp. of (Kawase) 925; compn. of leaves (Pigorini) 1347.
Mulhouse band, detecting of tanning and coloring matter by means of (Berteau) 870.
Multirotation. See *Optical rotation; Sugar, analysis*.
Mummification of stuffed animal and anatomical preps. (Deegener) P 2298.
Munitions, modern, of war (Lewes) 3360.
Muscarine (Dale) 104; poisoning (Raaflaub) 484.
Muscle, action of chelidonine on smooth (Hamslik) 104, 658, 2671; distribution of P in striated (Rabbeno) 220; vapor-pressure hypothesis of contraction of striated (Roaf) 331; swelling capacity in acids (Arnold) 469; stimulation of skeletal, by NaCl solns. (Benda) 478; temp. and swelling of (Lichtwitz) 479; action of β-iminoazolylethylamine and *p*-hydroxyphenylethylamine on smooth (Quagliariello) 484; extractives in crayfish (Kutscher) 487; production of acid by contracting (Roaf) 633 (Harvey) 3079; contraction of smooth, and heat production (Snyder) 633; myothermic expts. in salt solns. and contraction of (Weizsaecker) 633; swelling (Kórösy) 634; glycogen of (Parhon) 647; alkalescence of blood during, cramps (Sass) 657; action of poisons on (Weill) 658; rare earths and contractility of (Höber) 662; S and P in, of marine animals (Costantino) 818; fatty

acids and unsaponifiable substances in, of mammals (Costantino) 818; org. P in (Costantino) 927; liberation of fat and autolytic proteolysis in (Lattes) 927; formation of lactic acid and H_3PO_4 in (Embden) (Cohn) (Laquer) 928; reaction of frog (Pechstein) 929; and xanthine and purine derivs. (Golowinski) 937; chemistry (Costantino) 1073; changes in voluntary, in general diseases (Jewesbury) 1348; meat ingestion and amino acid of (Wishart) 1630; (Quagliariello) 1637; acidity (Porcelli-Titone) 2103; action of muscular tissue on amino acids (Lombroso) 2104; osmotic properties (Meigs) 2104; action of quinone on striated (Secher) 2110; chem. properties of—P in (Quagliariello) 2258; functional edema in frog (Back) 2264; tonus of skeletal (Kuno) 2665; detg. creatine in (Janney) 2771; protein (Bokorny) 2907; protein and non-protein substances (Janney) 2913; fate of fatty acids in survival processes of (Winfield) 2927; creatinine in and behavior of creatine during fatigue (Scaffidi) 2931; chem., tonus (Manfeld) (Ernst) 2935; extractive substance of, tissue (Smorodintzev) 3088; contractility (Bayliss) 3254; metabolism of amino acids circulating in, in functioning (Lombroso) 3275; gas metabolism of active (Mettenleiter) 3281; sp. heat of, protein (Krummacher) 3284; action of physostigmine on (Langley) 3301; osmotic properties of ash of clam (Meigs) 3302; see also *Work; Contraction.*

Muscovite (Johnsen) 41.

Museum specimens, preserving (Elliott) P 673.

Mushroom, poisoning (Clark) 1509.

Musk, ketone with odor of (Sack) P 2424.

Musk-seed oil (Schimmel & Co.) 2692.

Mussels, absorption of fat by (Churchill) 2404.

Mustard oils, in Cruciferae (Blanksma) 1613.

Mustard seed (Winton) 2605.

Musts, comp. in relation to vintage-time (Rosa) 5041; org. P in (Finzi) 688, 1088; of 1914 from the Pfalz (Krug) 1821.

Mutarotation. See *Optical rotation.*

Mutation of maize (Jungelson) 2102.

Muthmannite (Schaller) 42.

Mycoderma vini, morphology of (Perotti) 1796.

Mycodextran, autolysis and, of *A. niger* (Dox) 814.

Mycology, Mykologie für technische Chemiker, u. s. w. Bd. 5. Brauerei, Brennerei, etc. (Lafar, book) 1222.

Myelinosis (Chalatov) 479.

Myristica, reaction of, seeds (Freund) 1826.

Myristic acid, nonanol and methylbenzylcarbinol esters (Kenyon) 64.

Myrtillidine chloride (Willstätter) 1306.

Myrtilline salts (Willstätter) 1306.

Nacrite (Ledoux) 3194.

Naphtha, detg. toluene in (Colman) 1545; South Bolivian and Argentine (Rakuzin) 1545; solvent (Wendriner) P 2001; origin (Kizhner) 2147; extn. of paraffins from (Rakuzin) 2148; formation (Chichibabin) 2498; purifying (Cronenberger) P 2814.

Naphthalene, heat of combustion (Dickinson) 9; inflammability of (Storp) 40; compressibility of (Essex) 261; germination, development and nitrification in presence of (Cacciari) 685; estg., in spent oxide (Davis) 707; from art. coal (Mayer) 856; system C_2H_6-$C_{10}H_8$ (Prins) 1564; b. p. (Kaye) 3161.

β-Naphthaleneazochloroacetyl-β-naphthylamine (Jacobs) 2073.

Naphthalene derivatives, *peri-* (Errera) 447.

2-Naphthalene-2-indolindigo (Jolles) 2884.

4-Naphthalene-2-indolindolignone (Jolles) 2884.

Naphthalene series, ureas of (Bayer & Co.) P 1096; phthalides of (Copisarow) 2519.

Naphthalene-sulfochloride method (Lob) 2392.

Naphthalenesulfonic acids, Na salt of β- (Ellinger) 462; mono-, and derivs. (Witt) 2094.

β-Naphthalenesulfonylaminolauric acid (Le Sueur) 603.

Naphthalide (Errera) 447.

Naphthalidenecarboxylic acid, Et ester (Errera) 447.

α-Naphthapyranols, synthesis of (Ghosh) 2516.

Naphthenic acids, in refining of kerosene (Pyhälä) 372; (Pekov) 800; influence of presence of soaps of, on elec. cond. of heavy hydrocarbon oils (Holde) 1109; from lubricating oils (Herr) 1110; sulfonated (Davidsohn) 1698; in Baku petroleum (Pyhälä) 1842.

***peri*-Naphthindandiones,** condensation products from (Badische) P 3368.

***peri*-Naphthindantrione,** ureines and hydrazone (Calderaro) 1042.

β-Naphthisatin (Bayer & Co.) P 1670.

β-Naphthobenzyl chloride, compd. with $(CH_3)_6N_4$ (Jacobs) 1611.

Naphthoic acid derivative (Kahn) P 1846.

Naphthoic acids, opt. rotation of esters of 1- and 2-, with sec. alcs. (Kenyon) 1036; derivs. of β- (Jacobs) 2075.

Naphthol benzyl sulfides and sulfone (Zincke) 1059; and derivs. (Rennert) 1774.

Naphthol blue, oxidase reaction of nervous system (Katsunuma) 1187.

1-Naphthol-2-carboxylic acid and acetate (Jacobson) 2222.

1,1'-Naphthol 4,4'-disulfide and diacetate (Zincke) 1059.

1,4,α-Naphtholideneanthranilic acid and acetoxyoxazine (Ekely) 1065.

Naphthol mercaptans, diacetate (Zincke) 1058–9; derivs. (Rennert) 1774.

Naphthol methyl sulfide and derivs. (Zincke) 1059 (Rennert) 1774.

1-Naphthol methyl 4-sulfoxide and sulfone (Zincke) 1059.

Naphthology in Russia in 1913 (Rakuzin) 371.

Naphthols, *o*-hydroxyazo compds. from α- (Charrier) 70; new reaction of β- (Katayama)

Digitized by Google

1091; behavior toward Ti^{IV} (Hauser) 1180; allyl ethers of β- (Claisen) P 1225; production of azo dyes on fiber by naphthol AS (Ulrich) 1548; sulfide of β- (Hinsberg) 2064; detection of β-, in lysol (Bodmer) 2965.
β-Naphthol sulfides (Hinsberg) 209.
1-Naphthol-5-sulfinic acid and di-Me ether (Rennert) 1774.
β-Naphthol sulfone (Hinsberg) 210.
"Naphthomethylenequinone" (Pummerer) 316.
Naphthonic acid and Me and Et esters (Errera) 447.
α-Naphthoquinone, action on, on aminobenzoic acids (Hauschka) 912.
1,4-Naphthoquinoneacridone (Hauschka) 913.
α-Naphthoquinone-2-anilidocarboxylic acid *o*-, *m*- and *p*-, and derivs. (Hauschka) 912, 913.
Naphthoxyethyl bromide, α- and β-, and derivs. (Jacobs) 2076.
Naphthylamines, polymorphism of derivs. of (Senier) 203; vanillylidene derivs. of α- and β- (Senier) 1907; equil. in system: guaiacol– α- (Pushin) 2176; thio derivs. of β- (Reeve) 2891.
1,8-Naphthylaminesulfonic acid, condensation product of, with *p*-phenylenediamine and with *p*-toluylenediamine (Hahnenkamm) P 721.
α-Naphthyl bromoethyl ether and deriv. (Jacobs) 2076.
sym-**α-Naphthyl-*p*-bromophenylurea** (Oliveri-Mandalà) 71.
α-Naphthylcarbamyl azide (Oliveri-Mandalà) 70.
Naphthylene - *N* - hydroxyphenyltriazole, ethers of (Ferreri) 70.
1-Naphthyl-*n*-hexylcarbinol, rotation (Kenyon) 292.
1-Naphthylhexylcarbinyl acetate (Kenyon) 293.
α - Naphthylhydrazones and phototropy (Padoa) 1319.
l-**1-Naphthylmethylcarbinyl acetate** (Kenyon) 293.
α-Naphthyl methyl ketone and BzH (Albrecht) 911.
Naphthylosazones and phototropy (Padoa) 1320.
Naphthylphenylisoxazoline and derivs. (Albrecht) 912.
Narceine, isolation products of (Paternò) 619.
Narcosis, Mg (Stransky) 662 (Kobert) 3295; action of central stimulating agents on chloral (Morita) 1511; theory of (Traube) 1512, 3298; metabolism during urethan (Raeder) 1807; (Tashiro) 2108; and suffocation (Winterstein) 2944; viscosity and (Traube) 3258; extra sugar during ether and N_2O, in phlorhizinized dogs (Sansum) 3277.
Narcotics, influence on decomp. processes (Wegener) 98; liver function and (Whipple) 934; equiv. wts. of distribution of (Dorner) 936; and permeability of red blood corpuscles (Joel) 1640; (Waterman) 1929; in phlorhizin diabetes (Sansum) 1937.
Narcotine, polymorphism (Kremann) 909.
β-Nataloin, resolution of (Léger) 2895.
Natrodavynite (Zambonini) 774.
Natrolite, diffusion of ions in (Schulze) 746.
Necrologies. See *Obituaries.*
Necrosis, diet and (Opie) 646; adipose, of peripancreatic tissue and of pancreas (Verdozzi) 1348; exptl. $CHCl_3$, of liver (Quinan) 1637.
Negatives. See *Photography.*
Nematode, eradication of, *Heterodera schachtii* (Müller) 1854.
Neodymium, absorption spectrum (Garnier) 3162.
Neodymium ethyl sulfate, morphotropic relations with Et sulfates of other rare elements (Jaeger) 990.
Neon, production by elec. discharge (Collie) 20; wave length of, line (Takamine) 2622 (Meggers) 3021.
Neon tubes, light production in (Claude) 264.
Neosalvarsan, changes in cerebrospinal fluid after administration of (Kerl) 1507; influence on arterial blood-pressure (Rolleston) 2943; see also *Arsenic compounds; Salvarsan.*
Neothesin (Prinz) 3300.
Neoytterbium, sepn. of (Blumenfeld) 542.
Neoytterbium ethyl sulfate, morphotropic relations with Et sulfates of other rare elements (Jaeger) 990.
Nephelite (Washington) 2207; -syenite (Quensel) 2496; basalt (Mansfield) 2634; -syenites of Haliburton Co., Ontario (Foye) 3196.
Nephelometer, converting Duboscq colorimeter into (Bloor) 2725; for detg. small quantities of H_3PO_4 (Serger) 2745; (Marshall) 2914; for estn. of purine bases (Graves) 2916.
Nephrectomy and synthesis of hippuric acid (Kingsbury) 2397; see also *Kidney.*
Nephrite (Beutell) 188; in Apennines (Martius) 773; (Uhlig) 1160.
Nephritis, creatine and creatinine elimination in (Lampert) 96; relation between phenolsulfonephthalein excretion in urine and non-protein N in blood in (Frothingham) 98; exptl. U (Mosenthal) 333; theobromine sodium salicylate in (Christian) 336 (O'Hare) 2268; diet and (Opie) 646; nucleases of sera in (Kochnev) 656; hippuric acid in tartrate (Kingsbury) 817; glucosuria in (Luzzatto) 819; nitrogenous diets in (Frothingham) 1194; renal function in (Quinby) 1195; regulation of blood vol. in exptl. (Chisholm) 1198; non-protein nitrogenous compds. of blood in (Myers) 1502; relation between amylase retention and excretion and non-protein N retention in U (Fitz) 1638; Oedema and (Fischer, book) 1805; acid excretion in (Henderson) 1937; retention of alkali in (Palmer) 1937; (MacNider) 1940; and compn. of tissue fluid (Boycott) 2105; protein of urine in (Cameron) 2266; uric acid

Digitized by Google

excretion in (Palmer) 2399; diminished power of nephritic kidney for eliminating uric acid (Fine) 3091; K poisoning in (Smillie) 3091; enzymes in blood and urine in (Lorenzini) 3098; creatinine of blood in (Myers) 3287.

Nephropathies, phys. analysis of blood serum in (Butterfield) 3292.

Neradol D (Rogers) 2464.

Nernst equation (Eggert) 2833.

Nerve centers, injection of alc. into gasserian ganglion in neuralgia (Byrnes) 825; sp. hypersensitiveness of heat centers—direct heating and cooling of heat center (Hashimoto) 2268; effect of Ca and K on respiratory and cardiac centers (Hooker) 2779.

Nerves, innervation of thyroids (Ossokin) 97; acids and irritability of (Elias) 336; CO_2 production from, fiber in atm. of H (Tashiro) 337; comp. of ventral and dorsal medullary cords of ox (Buglia) 478; antagonistic (Raaflaub) 484; paralysis of peripheral, by acids and salts (Hacker) 484; temp. coeff. of refractory period in (Adrian) 634; action of poisons on (Weill) 658; secretory innervation of hypophysis (Rabens) 819; conduction in *Cassiopea* (Mayer) 1349; effect of ethylurethan and chloral hydrate on CO_2 production in nerve fiber (Tashiro) 2108; impulse (Tashiro) 2397; curarizing action of scopolamine (Obré) 2552; fat-phanerosis in cells (Biondi) 2666; paralysis of 6th pair of, after rachistovainization (Terrien) 2942; influence of vagus, on gaseous metabolism of kidney (Pearce) 3089; refractometry of, fluid (Babes) 3256; conduction and excitation in (Lillie) 3257; see also *Respiratory center; Vagus,* etc.

Nervous system, syphilis of (Sachs) 484, 2660 (Garretson) 2943; and diabetes (Zagorowsky) 653; salvarsan therapy of syphilis of (Iwaschenzoff) 658; vasomotor center (Pilcher) 659; action of purine derivs. on (Golowinski) 937; naphthol blue oxidase reaction of (Katsunuma) 1187; enzymes of (English) 1922; adrenal deficiency and irritability (Hoskins) 1933; sympathetic, and tonus of skeletal muscle (Kuno) 2665.

Nessler reagent (Frerichs) 1588.

Neumann-Hermann reaction (Grimaldi) 1068.

Neumann lines (Matveev) 432.

Neumann method, calcn. of H_3PO_4 in (Jodidi) 2044, 2856.

Neuralgia, injection of alc. into gasserian ganglion in (Byrnes) 825; (Squire) 3291.

Neurine, conversion of choline into (Schmidt) 2087.

Neuritis, Pb (Sante) 2403.

Neuronal, Mg-, hypnosis (Gensler) 2110; distribution in organism (Gensler) 2945.

Neutrality, regulation of pregnant organism (Hasselbalch) 1193.

Neutralization, of adsorbed ions (Bancroft) 1265, 1711; neutralising power of urine (Quagliariello) 1923; power of saliva (Marshall) 1938; curve of H_3BO_3 (Prideaux) 2174.

Neutral salt action and ions in soln. (Poma) 991; influence in acid dye bath (Herz) 1119; influence on tendering of cotton with acids (Fort) 3131.

Newberry method, lime detn. (Price) 573.

Newnam hearth (Newnam) 3048.

Nichols medal award, I. Langmuir, recipient 1264.

Nichrome, gauze (Hopkins) 981.

Nickel, detg. Co in presence of (Metzl) 40; Co-Ni-pyrite (Vernadskii) 42; cooking utensils (Vuk) 109 (Gheorghiu) 487; coating (Cooper) P 288; and C at higher temps. (Ruff) 435; compd. for uniting (Canzler) P 593; reducing pyrophoric property of (Morey) P 849; elec. properties of, at low temps. (Onnes) 879; spark spectrum of (Bilham) 882; in 1913 (Hess) 905; Pt-tipped, contact points (Eldred) P 1027; in meteoric stones (Prior) 1290; (Brown) 1296; coating Al, glass, etc. with (L'aluminium français) P 1376; and its oxides in catalysis (Senderens) 1421; complex ions of, and Co with cyanogen (Rossi) 1438; formation of, in hardening oils with Ni compds. (Norman) 1552; action on water (Jorrissen) 1597; -plated Al (Canac) 1583; colors (Mellor) 1835; effect of pressure on arc spectra (Duffield) 1872; reclaiming anodes 2034, 2840; temp. coeff. of Young's modulus for (Harrison) 2215; behavior of V and B toward (Giebelhausen) 2216; and mechanical properties of Cu (Stahl) 2217; magnetostriction and resistance of (Heaps) 2484; bars, anode as flat (Hall) 2739; dissolution of, in H_2SO_4 (Reichinstein) 3019; comparison of arc and spark spectra of (Duffield) 3022; hardening oils with catalyzers (Siegmund) 3138.

Nickel, analysis, electrolytic (Marsh) 278; in hardened oils (Prall) 1127; sepn. from chloride solns. (Riedel) 1275; (Malatesta) 2200; (Zuccari) 2200; quant. detn. with dimethylglyoxime (Wagemann) 3188.

Nickel, metallurgy of (Sulman) P 289; chloridizing roast—sepn. of Cu from (Dudley) 429; sepg. from Cu-Ni mat (Hybinette) P 1009; from silicates (Burlet) P 1279 (Sulman) P 2055; (Madagascar Minerals Syndicate, Ltd.) P 1457; sepg. Co and (Reid) P 2055; (Borchers) P 2760; roasting Cu-Ni ores (Manz) 3049.

Nickel alloys, with Fe and Co (Borchers) P 290; composite metal (Gen. Elec. Co.) P 291; dilatation of ferro-Ni (Chevenard) 432; with Ta (Siemens & Halske A.-G.) P 595; forming Cu-Ni anodes for electrolytic sepn. (Hybinette) P 1009; Ni-Cu-Au-Ag (Parravano) 1024; with Cu and Pb (Parravano) 1025; with Co (Borchers) P 1029; casting Monel metal (Lake) 1168; with Al (Capac) 1169; with Fe (Hyde) P 1171 (Borchers) P 2639; Ni-Al and Cu-Ni-Al (Read) 1598;

Digitized by Google

Cu-Ni-Al (Joyce) P 2505; influence of W on (Irmann) 3203; Cr-Cu-Ni (McFarland) 3205; see also *Iron alloys; Steel.*

Nickel amide (Bohart) 3182.

Nickel-ammonia tetrathionate (Calzolari) 2845.

Nickel arsenide, as Ag precipitant (Palmer) 1888.

Nickel borate, as catalyzer for hydrogenation (Erdmann) 1255 (Norman) 1552 (Schonfeld) 2988.

Nickel bromide, prepn. of, and a compd. of with Et_2O (Ducelliez) 565.

Nickel chloride, sepn. of Ni from, solns. (Riedel) 1275.

Nickel compounds, Ni salts with allylamine (Pieroni) 1041; formation of Ni in hardening oils with (Norman) 1552; with Co (Pickering) 2849.

Nickel deposits, Sudbury (Howe) 45.

Nickel halides, NH_3 compds. of (Biltz) 568.

Nickel hexaammine chlorate (Ephraim) 2194.

Nickel-hexamethylenetetramine, bromo-, chloro- and iodomercuriates (Calzolari) 2846.

Nickel-hexamethylenetetramine tetrathionate hydrate (Calzolari) 2845.

Nickel hydroxide (Woodruff) P 2295.

Nickel nitrate, compd. with hexamethylenetetramine (Vanino) 1049; prepn. of (Groschuff) 3151.

Nickel nitride (Bohart) 3182.

Nickelomolybdates (Barbieri) 897.

Nickel oxides, emissivity (Burgess) 13; plate (Hoyer) P 761; in catalysis (Senderens) 1421; granular hydrated (Frasch) P 1535; formation of Ni in hardening oils with NiO (Norman) 1552; regenerating, electrodes (Svenska Ackumulator, etc.) P 1585; formation of isomorphous mixed crystals between CoO and NiO (Hedvall) 3039.

Nickel pentaammine iodate (Ephraim) 2194.

Nickel plating. See *Electroplating.*

Nickel-pyridine tetrathionate (Calzolari) 2845.

Nickel salts, compds. of, with allylamine (Pieroni) 1041; reactions with KNH_2 in liquid NH_3 (Bohart) 3182.

Nickel sulfate, electrolyzing acid, soln. (Hybinette) P 3035

Nickel thiocyanate (Bohart) 3182.

Nickel triaquo-pentaammine iodate (Ephraim) 2194.

Nicotine, prepn. of exts. on farm (Ellett) 352; addition product with $BzPh$, and chloroplatinate (Paternò) 618; from waste tobacco (Halle) P 693; tobacco and (Florent) 949; Me-red as indicator in detn. of (Schick) 953; in Hungarian Csersi tobacco (Toth) 2126; concg. solns. of (Newborne) P 2423; isolated heart of frog under action of (Zanda) 2777; in tobacco plant during growth (Rasmussen) 2925; influence of org. compds. on, in tobacco plant (Ciamician) 3271; detg. in tobacco (Rasmussen) 3326; extg. from tobacco dust (Mewborne) P 3330.

Nicotoine (Noga) 1769.

Nikola (Puckner) 2129.

Ninhydrin, poisonous action of (Loew) 1513; in vol. analysis (Bolland) 3186; exam. of tuberculous cerebrospinal fluid with (Nobel) 3285.

Ninhydrin reaction, detg. substances reacting with ninhydrin (Herzfeld) 92; of peptones (Fränkel) 639; and age and habits of individuals (Takamine) 1339.

Niobium. See *Columbium.*

Niter. See *Potassium nitrate; Sodium nitrate.*

Nitrates, ultraviolet spectrum of metallic (Massol) 14; detg. in water (Gill) 340 (Sabatini) 1356; cheap, and economic life (Strong) 557; behavior of yeasts and molds towards (Kossowicz) 641; detection in milk (Fritzmann) 827; central in soil (Buddin) 832 (Weibull) 835 (Kellerman) 1215; in soils and plants (Lyon) 833; concg. solns. (Wielgolaski) P 850; estg. by $Ti_2(OH)_6$ (Knecht) 1018; detg. N in $CaCN_2$ in presence of (Segawa) 1085; in rain water (Miller) 1208; distribution of, and relation to alkalies (Headden) 1815; detection (Tingle) 2042; in glass ind. during war (R.) 2135; discharges (Freiberger) 2595; cell for electrolyzing (Jenkins) P 2626; deposits in Idaho and Oregon (Mansfield) 2633; titration with $FeSO_4$ (Bowman) 2747; detg. reduction in H_2O analysis (Breed) 2954; effect of green manuring on, of soil (Hill) 3320; see also *Nitric acid; Nitrogen compounds.*

Nitration of cotton (Stocker) 152; explosion of iron C_6H_6, app. (Pikos) 152; of PhF (Swarts) 443; of mixed dihalobenzenes (Holleman) 624; 2384; (Anon.) 1248; theory of, mixts. (Sapozhnikov) 1900; of α-aminopyridine (Chichibabin) 1902, 3057; of dimethyl-*m*-phenetidine (Reverdin) 2228, 3223; of haloacylanilines (Votocek) 2380; of methylurea (Backer) 2383; simultaneous chlorination and, of acetone (Rakshit) 2765; of PhOH derivs. (Holleman) 3233.

"Nitre spots," in soils (Stewart) 1649.

Nitric acid, ultraviolet spectrum (Massol) 14; strength of, and detn. of H_3PO_4 in soils (Brauer) 114; prep., purification and conc. of (Oelker) 128; soln. of Cu in (Drapier) 169; H_2SO_4 free from (Gregoire) 184; conversion of NH_3 into (Donath) 356; in lime juice (E'We) 513; b. p. of aq. at diff. pressures (Creighton) 744; action on proteins (Mörner) 917; for leaching ores (Anon.) 1023 (Bueler-de-Florin) 1164; addn. products of (Reddelien) 1910; as solvent for rubbers (Jones) 2004; action on satd. compds. (Nametkin) 2067; Brit., plant and absorption towers, 2130; action on Al (Trillat) 2627; action on rosin (Paul) 3135; d. and viscosity of aq. solns. of (Bousfield) 3157; prepn. from atm. N (Keutel) 3172; Brit., works, 3332, *Patents;*

Fab. in Mannheim) 697, 1980 (Norsk Hydro-Elek., etc.) 1101, 1375 (Schall) 1537 (Moest) 2432 (Collett) 3336; (Meigs) 357; (Uebel) 697, 699, 1978; (Raschig) 1099; (Österr. Ver. für Chem., etc.) 1538; distg. (Beers) 1832; (Hausser) 2435; (Raschig) 2576; (Rankin) 2699; retort-furnace for distg. (Fletcher) 3334; (Farbw.) 3337; (Soc. Anon. Poudres) 3338; see also *Nitrogen, analysis; Nitrates; Nitrites*, etc.

Nitrides (Soc. gen. des Nitrures) P 564; (Giulini Geb.) P 956; action of ammono acids on metallic (Franklin) 1016; metallic (Zänker) P 1281; strong articles from (Podszus) P 2437; furnace for making (Coutagne) P 2841; action of acid amides on, of heavy metals (Franklin) 3037; from atm. N (Peacock) P 3175.

Nitrification, mechanism (Mumford) 499; of soil (Green) 499; of Oregon soils (Beckwith) 500; org. matter and, in arable soils (Kossowicz) 500; efficiency of Colorado soils (Sackett) 681; in pasture soils (Gilmingham) 681; in presence of $C_{10}H_8$ (Cacciari) 685; in fallow soil (Velbel) 835; in Hawaiian soils (Kelley) 1084; in peaty soils (Coquidé) 1361; effects of $CaCO_3$ and $MgCO_3$ on (Kelley) 3112; influence of Mn oxides on (Leoncini) 3113; in various soil types (Reed) 3317.

Nitriles, aminoalkylcrotonic and alkylacetoacetic (Mohr) 59; sapon. by conc. H_2SO_4 (Bougault) 1048; acetylenic (Grignard) 3221.

Nitriloacetic acid, menthyl ester (Stadnikov) 3052.

Nitrites, poisoning from $BiONO_3$ (Zadek) 658; kinetics of bromate-nitrite reaction (Kurtenacker) 744, 2617; analysis of (Busvold) 1725; detg. O in waters in presence of (Elvove) 2117; see also *Nitrous acid*.

5 - Nitro - 2 - acetamino - 2 - methoxytoluene (Simonsen) 2519.

3-Nitro-4-acetoxybenzyl chloride and iodide and 6-acetoxy chloride (Jacobs) 1611.

3-Nitro-4-acetoxybenzyl iodide, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.

3 - Nitro - 4 - acetoxybenzylpiperidine, -HCl (Jacobs) 1611.

Nitroacetoxydinaphthothiozin (Ghosh) 3228.

o-Nitroacetylmandelic thioamide (Albert) 1775.

2 - Nitro - 4 - acetyl - p - phenylenediamine (Morgan) 608.

Nitroamides, absorption spectra of aromatic (Morgan) 3164.

Nitroamines, absorption spectra of aromatic (Morgan) 3164.

3-Nitro-2-aminoacetophenone, 3- and 5-, and semicarbazone (Bamberger) 1782.

Nitroaminoanthraquinones (Badische) P 1396.

Nitroaminobenzophenones (Badische) P 726.

Nitroaminobenzosulfones (Badische) P 726.

2,4 - Nitroaminodiphenylaminecarboxylic acid and **-HCl** (Lilke) 1910.

Nitro-2-amino-2-methoxytoluene, 6-, 5- and 4-, and derivs. (Simonsen) 2519.

Nitroaminophenylarsonic acid (Boehringer & Soehne) P 1669.

Nitroanthraquinone, sepg. 1-, from crude (Ullmann) P 2153.

Nitro-m-arylsalicylic acids (Purgotti) 70.

Nitroazoxyphenetole (Valori) 1476.

Nitroazoxyphenol (Valori) 1476.

p-Nitrobenzalmethylsemicarbazide (Backer) 2384.

m - Nitrobenzalphenylhydrazone, peroxide (Busch) 806.

Nitrobenzene, cryoscopic const. (Böeseken) 445; reducing (Marwedel) P 721; soln. of Br in (Joseph) 993; transformation during putrefaction (Rossi) 1341; detection in oils and soaps (Armani) 1401.

4 - Nitrobenzeneazo - 2' - chloroacetylamino-4'-dimethylaminobenzene (Jacobs) 2073.

4 - o - Nitrobenzeneazo - 1 - naphthylamine and derivs. (Casale) 796.

Nitrobenzenediazo-1-oxides (Morgan) 2062.

m-Nitrobenzenesulfonic acid (Witt) 307; Ueber Umlagerungs-Reaktionen bei Arylamiden der m-Nitrobenzolsulfonsäure (Truttwin, book) 1919.

m-Nitrobenzene-p-tolylsulfamide and *N*-methyl deriv. (Witt) 307.

m-Nitrobenzohydroxyamidoxime and salts (Ley) 315.

Nitrobenzoic acid, p-, esters of glycol aryl ethers (Boyd) 198; borneol and isoborneol esters of p- (Henderson) 611; 1-isopropylcyclohexan-3-ol ester of o- (Crossley) 613; phenyl ester (Claisen) P 1225; o-chloroacetylaminophenyl ester and deriv. of p- (Jacobs) 2074; o-, m- and p-, derivs. (Jacobs) 2075–7; inosityl esters of m- (Griffin) 2091; o-, esters of (Crossley) 2225; double compd. of benzoic acid with m- (Bakunin) 2387; NH_4 salts of o-, m- and p- (McMaster) 2658.

Nitro-2,3-benzophenazoxine (Kehrmann) 627.

p - Nitrobenzoylaminoisopropyl, derivs. (Jacobs) 2075.

2 - Nitrobenzoylamino - 3 - naphthol (Griesheim Elek.) P 3133.

m-Nitrobenzoyl chloride, compd. with hexamethylenetetramine (Vanino) 1049.

p-Nitrobenzoylmalonic acid, di-Et ester (Jackson) 2531–2.

o-Nitrobenzoylmandelic thioamide (Albert) 1775.

p-Nitrobenzoyloxyethyl bromide and iodide, and derivs. (Jacobs) 2077.

Nitrobenzyl chloride, o-, m- and p-, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.

Nitrobenzylnicotinium, o- m- and p-, salts (Weinhagen) 2231.

Nitrobenzyl-α-picolinium, o-, m- and p-, salts (Weinhagen) 2231.

Digitized by Google

Nitrobenzylpyridinium, *o*-, *m*- and *p*-, salts (Weinhagen) 2231.
***o*-Nitrobenzylpyridinium chloride** (Gluud) 1616.
Nitrobenzylquinolinium, *o*-, *m*- and *p*-, salts (Weinhagen) 2231.
***o*-Nitro-*p*-bromostilbene** (Pfeiffer) 2534.
Nitrocamphor and derivs.—action of formamide (Lowry) 2764.
Nitrocellulose, solubility in EtOH (Schwarz) 152; solns. (Anilin-Fab.) P 388; (Häussermann, book) 526; from cotton and wood (Schwalbe) 715; chemist and, ind. (Schüpphaus) 1390; chem. engineering in, manuf. (Stadelman) 2149; explosion of (Coningham) 2592; solvent for (Sparre) P 2593 (Hibbert) P 3363; effect of addition of diphenylamine on stability of, powders (Dupre) 2980; see also *Explosives; Powder*.
Nitrochloroacetylaniline, *m*- and *p*-, and deriv. (Jacobs) 2073; *o*- (Votocek) 2380.
***m*-Nitrochloroacetyl-*p*-toluidine**, deriv. (Jacobs) 2073.
8-Nitrochlorotolyl methyl 4-sulfoxide and derivs. (Zincke) 55.
Nitro compounds, formation of aliphatic (Neogi) 205; heat of combustion of aromatic (Swarts) 445; direct reduction of aromatic, to NO compds. (Rinkes) 625; colorations produced by some (Harper) 1037; aromatic (Giua) 1479; color of mixts. of anilines with aromatic (Biron) 2069 (Orlov) 2069; crystalog. of nitro derivs. of benzene (Steinmetz) 2088; some aromatic, and solubility of nitro derivs. of toluene (Giua) 2089; detn. of (Berry) 2494; formation of chlorinated amines by reduction of (Hurst) 2887; of dinaphthothioxin (Ghosh) 3228.
Nitrocresotinic acid, sulfonyl chloride (Kothe) 693.
Nitrocusparine, -HI (Troeger) 2079.
Nitro-2,7-diacetoxyphenanthraquinone (Mukerjee) 609.
Nitrodibenzylthioresorcinol (Finzi) 69.
Nitrodichloroacetylaniline, *o*- and *p*- (Votocek) 2380.
Nitrodichloromethylbenzophenones (Maron) 307.
Nitro-3,4-diethoxybenzoic acid (Perkin) 1312.
Nitro-2,7-dihydroxyphenanthraquinone (Mukerjee) 609.
Nitrodimesitylmethane (Wenzel) 599.
6-Nitro-2,3-dimethoxybenzoic acid and Me ester (Perkin) 200.
2-Nitro-3,4-dimethoxybenzyl chloride, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.
2-Nitro-3,4-dimethoxybenzylidenehippuric acid (Bain) 201.
6-Nitro-2,3-dimethoxyphenylparaconic acid (Perkin) 200.
Nitro-2,5-dimethylbenzenesulfonic acids, tolyl esters and toluidides (Huston) 2654.
Nitroethoxyazoxybenzene (Valori) 1476.
Nitrofibroin, conversion of fibroin into (Johnson) 2657.
Nitrogen, combining with O (Wolcott) P 27 (Regester) 142 (Strong) 557; non-protein, in blood in nephritis (Frothingham) 98 (Mosenthal) 333; production of anaphylatoxin in serum treated with agar deprived of (Bordet) 103; metabolism of tubercle bacilli in media with inorg. salts as sources of (Kendall) 215; wave lengths of lines of (Clark) 264; soly. in Fe (Jurisch) 286; non-protein, of blood (Tileston) 332; amino, in stomach contents (Zunz) 332; nitric, in country rock (Stewart) 347; propagation of flame in limit mixts. of CH_4, O and (Burgess) 379; content of sugar beets (Strohmer) 391; in living yeast (Kullberg) 471; of wheat kernel (Tulaikov) 475; involution of uterus and N output of urine (Siemons) 481; of processed fertilizers (Lathrop) 501; utilization of org., of manures (Von May) 501; products, 557; mixt. of H and (Scholl) P 562; -protein table (Callaway) 638; availability of, of cottonseed meal and beef scrap (Hartwell) 644; elimination in anaphylaxis (Manoilov) 652; of blood in hepatic disease (Farr) 655; influence of soils and of water content on, changes (Robson) 681; sepg. O and (Gue) P 696; liver N in anaphylaxis (Barger) 821; enriching soils in (Krainskii) 835; amino, in Alaska pea (Thompson) 925; nutrition of plants (Morrey) 925; simultaneous change in content of glycogen, enzyme and, in yeast (Salkowski) 921; in soils (Stewart) 833 (Schmuk) 946; relation of algae to (Schramm) 947; in cottonseed (Wells) 974; rectilinear diameter of (Mathias) 983; v. p. and critical pt. of (Onnes) (Crommelin) 988; valence of, in NH_4 salts (Noyes) 1062; source of combined, for *Ulva lactuca* (Foster) 1071; in corn (Moskvicher) 1189; diets in nephritis (Frothingham) 1194; non-protein, of blood in uremia (Foster) 1195, in rain and snow (Knox) (Shutt) 1208; protein requirements under diff. conditions—N minimum (Abderhalden) 1498; availability of, in Pacific Coast kelps (Stewart) 1524; utilization of, in septic and Imhoff tank sludges (Lipman) 1525; production (Farbw.) P 1536 (Nitrogen Ges.) P 1979 (Brownlee) P 2699 (Norsk Hydro Elek., etc.) P 2804 (Wallace) P 3119 (Brownlee) P 3119; active (Bender) P 1537 (Strutt) 1561; ratio of sp. heat for H and (Crofts) 1573; and mechanical properties of Fe (Chiyevskii) 1595; Fe and (Chiyevskii) 1595; extractive and total, in white and red striated muscles (Quagliariello) 1637; relation between amylase retention and excretion and non-protein, retention in U nephritis (Fitz) 1638; mutual influences of crops in relation to (Kellerman) 1650; oxidizable variety of (Lowry) 1708; non-coagulable N coeff. of blood serum in pregnancy and toxemia (Plass) 1805; utilization (Lipman) 1818; index of refraction and dispersion of liquid (Augustin) 1873; in butter-fat (Osborne) 1920; and higher plants (Molliard) 1930;

in growing pigs (Joseph) 1931; in urine in pneumonia (Signorelli) 1931; colloidal-, test in diagnosis of cancer (Goodridge) 1936; loss of, in cultivated soils (Swanson) 1961; transformations in bog soils (Arnd) 1962; condensation products of anthraquinone contg. (Farbw.) P 1998; spectra (Seeliger) 2030; action on carbide (Landis) P 2038; in coal (Simmersbach) 2140; in stools of infants (Van Slyke) 2264; renal function with reference to non-protein (Hopkins) 2266; activation (Koenig) 2336; detg. critical const. (Cardoso) 2474, 2828; influence of silent elec. discharge on mixts. of H and (Le Blanc) 2479; bivalent (Wieland) 2537; in legumes (Whiting) 2550; availability of org. (Breckenridge) 2558; in septic and Imhoff tank sludges (Lipman) 2558; amino-acid, of soil (Potter) 2683; transformation of atm., to protein (Baudrexel) 2772; (Farbw.) P 2801; disposition of bonds of pentavalent (Cohen) 2886; asymmetric tervalent (Moore) 2892; removal of albumin in urinary analysis (Tracy) 2912; relation between influence of light and, on growth of plants (Pfeiffer) 2925; urinary and blood, curves after feeding (Pepper) 2927; protein metabolism—N minimum (Kocher) 2928; physiology of, in thyroidectomized animals (Yuschenko) 2933; oxidation of, by elec. discharge in presence of O_3 (Ehrlich) 3029; causes of shortage of (Smorodintzev) 3088; replacement by P in piperidine (Grüttner) 3247; sparing action of NH_4 salts and urea (Grafe) 3279; partition in blood and spinal fluid (Woods) 3287; water-sol., of some common feeding stuffs (Hart) 3308; see also *Calcium cyanamide; Nitrogen fixation.*

Nitrogen, analysis, in steel (Barton) 39; in illuminating gas (Wohl) 143; in Norwegian saltpeter (Busvold) 183; Gunning-Cu method and Kjeldahl-Gunning-Arnold method (Jensen) 279; in org. substances (Wunder) 573; in coal (Fieldner) 705 (Simmersbach) 3348; by liquid air (Hamburger) 772; Folin-Farmer method (Back) 813 (Folin) 1926; N of molasses (Abonyi) 868; in leather (Nihoul) 977, 1702; in $CaCN_2$ in presence of nitrates (Segawa) 1085; non-protein, and urea, in blood (Wolf) 1187; in A-N mixts. (Hamburger) 1158; Kjeldahl-Gunning-Arnold method (Pickel) 1286; estg. amino acid α-N (Harding) 1340; use of HCl in estg. certain forms of org. (Drushel) 1613; amino-N detn. and diagnosis of cancer (Lowry) 1794; in coke (Margosches) 1839; non-protein, in blood (Greenwald) 1925; by Kjeldahl-Folin-Farmer method (Harding) 1926; in water (Booth) 1953; in soils (Allen) 1960 (Plummer) 3316; in milk (Meillère) 2114; in vegetable matter (Lébédiantzev) 2494; in urine (Justin-Mueller) 2772 (Meyers) 3260; in albuminous substances, 2911; non-protein N in finger blood (Taylor) 2912; amino N detn. (Strauss) 3254; test of activity of protective enzymes by micro-method for (Paquin) 3265; (Hare) 3318; see also *Ammonia, analysis; Kjeldahl method.*

Nitrogen bases, fungicidal and insecticidal properties of, from tars and tar oils (Chem. Fab. Nördlinger) P 503; increasing fungicidal, etc., action of (Flörsheim H. Nördlinger) P 1364.

Nitrogen chlorides, substituted (Datta) 1064.

Nitrogen compounds, simple transformations in N derivs. of glycols (Neuberg) 58; lab. mashing methods and, in wort (Ehrich) 350; from carbides (Fujiyama) P 697; (Bender) P 699; org., with P (Michaelis) 1031; N-O and N-H compds. (Bender) P 1101 (Hlavati) P 2576; constitution of (LeBas) 1436; non-protein, of blood in nephrites (Myers) 1502; (Landis) P 2038; (Krauss) P 2298; (Fujiyana) P 2700; yeast protein from inorg. (Donath) 2768; (Classen) P 2805; free energy of (Lewis) 2832; action of lactic acid bacteria on (Stutzer) 2920; influence of org. substances on transposition and action of, in soil (Gerlach) 2961; nature of, in coal and coke (Terres) 2975; in soils (Plummer) 3316.

Nitrogen fixation, by *Azotobacter* (Hanzawa) 93 (Reed) 2417; (Bucher) P 129, 1671, 2972; as cyanogen compds. (Bucher) P 357; in soil (Green) 499; by molds (Kossowicz) 641; in form of tyrosine, leucine and Witte peptone (Petrov) 682; elec. (Z.) 756; (Sinding-Larsen) P 851; by plants (Kovessi) 925, 3271 (Mameli) 2103, 3270; As and, in soil (Greaves) 946; by organisms in soil (Schneidewind) 947; by *Saccharomycetes* and molds (Kossowicz) 1070; (Bender) P 1101; ind. (Weinwurm) 1151 (Pont) P 1156 (Scott) 1273, 1274 (Adams) (Summers) 1274 (Prinsen-Gerligs) 2429; "cyanamid" process (Washburn) 1362; fixing, on ferro-Al (Soc. gén. des nitrures) P 1375; (Soc. gén. des nitrures) P 1376; (Peacock) P 1431, 2295, 2841, 3175; (Landis) 1719; Peat Bogs and Water Power in Relation to (Benetsch, book) 1720; in *Aspergillus* (Zaleski) 1796; in Colorado soils (Headden) 1815, effect of moisture on, in soil (Lipman) 2280; (Ashcroft) P 2802; during process of graphitizing C shapes (Peacock) P 2973; (Uhlmann) 3124; HNO_3 from atm. (Keutel) 3172; nitrides (Peacock) P 3175; effect of some org. soil constituents upon, by *Azotobacter* (Reed) 3317; in various soil types (Reed) 3317; (Serpek) P 3333; (Becket) P 3339; see also *Bacteria; Nitrification.*

Nitrogen linkage, morphine bases in which Ac_2O causes no rupture of (Tiffeneau) 1912.

Nitrogen metabolism. See *Metabolism, nitrogen.*

Nitrogenous material, sol. and incoagulable, in wort, 234; and vulcanizing properties of rubber (Stevens) 1134; biochem. decompn. in soils (Kelley) 2788; transformation during art. curing of tobacco (Bernardini) 2792; of yeast (Meisenheimer) 3324.

Nitrogen oxides, synthesis in elec. arc (Hene) 23 (Roselier) 2737; impurities in N_2O (Haskins) 123; dissociation of N_2O_3 (Jones) 168; H_2SO_4 free from (Gregoire) 184; NO in flames (Terres) 242; NOCl from Cl and NO (Trautz) 276; rate of combination of Cl and NO (Coates) 277; combustion of NH_3, HCN and C_2N_2 to NO (Wehrheim) 417; NO and ferrous salts (Bellucci) 418; fusibility curve for system NO–Me_2O (Baumé) 547; action of NO on $KMnO_4$ (Dutt) 566; effects of NO_2 on flour (Moore) 667; sp. heat of N_2O (Mercer) 738; compd. of $FeCl_2$ and NO (Bellucci) 897; behavior of diff. substances towards NO (Panzer) 1186; (Bradley) 1279; sugar during N_2O narcosis in phlorhizinized dogs (Sansum) 3277; blood changes produced by N_2O anesthesia (Casto) 3300. *Patents:* From air (Schönherr) 26 (Herman) 1833 (du Pont) 2352; by action of elec. arc (Koch) 27; N_2O (Torley) 362; (Summers) 563; (Krauss) 698; (Summers) 1011; NO (Rossi) 1012; (Pont) 1156; (Badische) 1376, 1673; (Farbw.) 1536, 2801; N_2O_5 (Classen) 2575; (Herman) 2576; (Badische) 2577; preventing punctures in elec. arc furnaces for making (Troye) 2625; lime for absorption of nitrous gases (Norsk Hydro-Elek., etc.) 2803; absorbing rarefied nitrous gases in water (Häusser) 2804; (Ver. Chem. Fab. Mannheim) 3120; catalytic oxidation of NH_3 to (Badische) 3337; catalysts for manuf. of (Badische) 3338.

Nitroglycerin (Hibbert) 150; sepg., from acid mixts. (Weyel) P 1692, 3130; system: –guncotton—condensation of, vapor on guncotton —extn. from ballistite (Chiaraviglio) 2148, 2149; explosion (Cooper-Key) 2150; sepn. from spent acids (Dynamit-A.-G., etc.) P 2453; neutralizing noxious gases from combustion of explosives (MacCawley) P 2983; see also *Explosives*.

Nitro group, change into amino group (Neuberg) 58; displacement of Ac by (Harding) 602; influence on substituents in benzene ring (Kenner) 605.

Nitroguaiacol, 5- and 4-, and acetates (Cardwell) 1468.

1-Nitro-4-hydroxyanthraquinone (Eckert) 601.

Nitrohydroxyazobenzene (Valori) 1476.

Nitrohydroxybenzeneazo-β-naphthols and K salt (Morgan) 2062; (Morgan) 2062.

Nitrohydroxybenzeneazoresorcinols (Morgan) 2062.

4-[3-Nitro-4-hydroxybenzyl] hydantoin (Johnson) 2530.

Nitrohydroxycarboxybenzenesulfonyl chlorides (Bayer & Co.) P 2986.

3-Nitro-4-hydroxycinnamic acid and Me ester (Johnson) 596.

3-Nitro-2-hydroxy-3-methoxybenzaldehyde (Rupp) 2233.

3-Nitro-4-hydroxyphenylmethylarsinic acid (Bertheim) 1338.

6-Nitro-4-hydroxy-m-tolyl methyl ether and salts (Cardwell) 1468.

Nitroisobutylglyceryl trinitrate (Matthews) P 2453.

***m*-Nitroisothiocyanobenzene** and related compds. (Fichter) 2543.

Nitrolime. See *Calcium cyanamide*.

Nitrometer, reversion (Lubarsch) 2725.

3-Nitro-4-methoxybenzoylbenzoic acid (Anilin-Fab.) P 2696.

Nitromethoxybenzyl chloride, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.

3-Nitro-4-methoxycinnamic acid (Johnson) 596.

3-Nitro-4-methoxyphenyl 3,4-methylenedioxystyryl ketone (Harding) 603.

5-Nitro-2-methoxytoluene (Simonsen) 2519.

2-Nitro-4-methylaminophenol and Ac deriv. (Meldola) 197.

3-Nitro-3,4-methylenedioxybenzylidene-hippuric acid and Et ester (Bain) 201.

2-Nitro-4'-methylphenyl ether, metallic salts (Cook) 2527.

2-Nitro-4'-methylphenyl ether sulfonic acid and sulfonyl chloride (Cook) 2527.

Nitromesrin pentamethyl ether (Perkin) 1312.

Nitron. See *Radium emanation*.

Nitronaphthalenes and theory of nitration mixtures (Sapozhnikov) 1900.

1-Nitro-2-naphthonitrile (Friedlaender) 1335.

***m*-Nitrophenacyl bromide**, deriv. (Jacobs) 2077.

Nitrophenolates, solubility of, in alc.-water mixtures (Fisher) 1903.

Nitrophenols, solubility of (Sidgwick) 3226.

Nitrophenyl diselenide (Pyman) 2889.

Nitrophenyl-1-phenyl-3-hydroxy-1,2,4-triazole, 5-*o*- and 5-*m*-, and derivs. (Oddo) 2525.

***m*-Nitrophenylsalicylic acid** (Purgotti) 70.

Nitrophenylselenious acid (Pyman) 2889.

***p*-Nitrophenylurea**, derivs. (Farbw.) P 383.

***o*-Nitrophthalanilide** (Rossi) 795.

2-Nitro-4-picryl-p-phenylenediamine (Morgan) 608.

Nitroproteins (Johnson) 2657.

Nitroprussides, reaction with ketones (Cambi) 451; photochem. phenomena in solns. of, with thiocyanates and thiosulfates (Casolari) 1435; action of sulfides on (Pereira) 3185.

3-Nitro-5-pseudocumidine (Huender) 1764.

5-Nitroresorcinolarsonic acid (Bauer) 1778.

Nitrosalicylic acid, derivs. of (Kothe) P 693; Ba salt (de Coninck) 2058.

Nitroso-α-camphidone (Noyes) 1063.

Nitroso compounds, direct reduction of aromatic NO_2 compds. to (Rinkes) 625; action on unsatd. compds. (Alessandri) 2240; Grignard reaction with (Wieland) 2540.

Nitrosodiethylammonium hexabromo-osmiate (Gutbier) 1439.

(Means) 2047; detection and estn. (Atmos) P 2333; origin of "sandstone" (Kennan) 2497; fractional pptn. of ore-forming compds. at moderate temps.—chem. of (Wells) 2860; of Tintic mining district (Crane) 3194; pre-Cambrian, in Ontario (Miller) 3194.

Ores, indeterminate cases in mixing, for calcn. of furnace charges (Chauvenet) 48; purifying solns. of metal salts from leaching, contg. colloidal silicic acid (Stuckle) P 130; removing $BaSO_4$ from (Greenstreet) P 132, 783; pulp consts. (Clevenger) 430; Mayari, in blast furnace (McKay) 431; concretionary formation on laterite—origin of fossil concretionary (Lang) 584; in 1914, 776; complex ore problem (Motherwell) 776; metallography and microscopic exam. of (Granigg) 902, 3195; persistence of, in depth (Rickard) 1020; at Hidden Creek mine (McConnel) 1021; recovery of Act and ionium from Olary (Radcliff) 1271; recovering H_2O from tailings (Cole) 2369; pulp measurement (Barth) 2503; of Mesabi range (Wolff) 2497; buying and selling of (Fulton) 2500; low-grade complex, of Park City, Utah (Arentz) 2636; see also *Briquets; Roasting; Sampling.*

Ores, analysis, sampling low-grade (Jennings) 186; sampler for mill pulps (Elmore) 166; sampling, in Transvaal Au fields (Förster) 579; (Schoeller) 1441; detg. Ag in, contg. Pt and Pd (Smoot) 1442; chart for detg. tailings value (McCauley) 1450; As in (Kleine) 1588; Zn in (Rubricius) 1729; flotation tests on (French) 2210; testing for cyanide process (Crook) 2210, 2500; mechanical sampler (Taylor) 2471; Tech. Methods of (Low, book) 2857; Aids to Analysis and Assay of Ores (Morgan, book) 3190.

Ores, treatment of, grinding for cyanidation (Pentland) 48, 1450 (Dorr) (Pettis) 776; chloridizing 777; leaching with HNO_3 (Bueler-de-Florin) 1164 (Island) 2056; filter for pulp (Faber) 1296; Cu (Orem) 1451; desulfurizing (Wilson) 1741; clarifying water from wet concn. (Nicolai) 1741; coarse crushing plant (Bradley) 2754; dressing (Richards) 2754; Amador Consolidated milling plant, California (O'Brien) 2868; Rochester mill, Nevada (Wood) 2868; new mill of Daly West Milling Co., Utah (Howard) 3049; Stamp Milling and Amalgamation (McFarren, book) 3213; (Wiard, book) 3213. *Patents:* Sepg. metallic sulfides (Lavers) 53; chloridizing (Ledoux) 289; (Timm) 440; mixer (Cailow) 591; roasting and chloridizing (Ramen) 591; dressing (Takeda) 593 (Jüngst) 2473; app. (Dorr) 782; (Bonson) 907; pulverizing (Granger) 982; screening app. (Kidney) 1170; desulfurizing (Fusina) 1170; filtering ore pulp (Vandercook) 1742; wet dressing sulfide (Smith) 1455; (Horwood) 1457; classifying and dewatering (Boudwin) 1743; (Gröndal) 1895; (Heskett) 2054; oxidizing sulfide (Ireland) 2055; washing (Harris) 2332; filtering solns. from ores (Hölderman) 2638; grinding (Wasmus) (Aldehoff) (Gebr. Pfeiffer) 2761 (Kretzman) 3218; kiln for sintering (Downs) 2759; (Koering) (Arnold) 2870; fine or dusty ore (Drefahl) 3049; crushing (Easton) 3217; agglomeration (Ezbrayat) 3333; see also *Amalgamation; Briquetting; Concentration; Cyanide process; Furnace; Filter; Leaching; Lixiviation; Metallurgy; Separation; Separator.*

Organ extracts, decomp. of orcinol- and phloroglucinol-glucuronic acids by (Sera) 465; behavior of uric acid with (Landmann) 634; and bacteria (Marfan) 640; gland exts. and blood sugar (Dresel) 818; absorption of Wassermann reaction antibody by organ emulsion (Mundt) 822; estg. lactic acid in (Meissner) 1188; action of glandular exts. on secretion of cerebrospinal fluid (Frazier) 1933; toxicity (Dold) 3070.

Organic chemistry. See *Chemistry, organic.*

Organic compounds, f. p. of (Timmermans) 9; detg. active H in (Zerevitinov) 75; aromatic, contg. Se (Lesser) 80; volatile, as sources of C (Grimm) 93; hydrogenating, of opium group (Zimmer & Co.) P 126; arsenation of (Roeder) 305; (Matthews) P 355; estn. of halogens in (Vaubel) 424; addition compds. of, with H_2SO_4 (Kendall) 454; crystals of, colored blue by I (Barger) 991; production of chloropicrin by action of aqua regia on (Datta) 1063; electrolysis of (Blaschke) 1275; higher valences of O in (Chelintzev) 1755; catalytic reduction of org. halogen compds. (Borsche) 1773; action of $TiCl_4$ on, containing O (Rosenheim) 1773; effect on wheat plants in soil (Upson) 1817; of Si (Meads) 1907; detn. of As in (Barthé) 2041; action of HNO_3 on (Nametkin) 2067; detg. Se in (Bauer) 2205 (Michaelis) 2494; constitution of, and their absorption of light (Baly) 2229; effect on plant characteristics (Schreiner) 2261; of soil and N-fixation by *Azotobacter* (Reed) 2417, 3317; reactivity of halogens in (Senter) 2764; estg. Br and Cl in (Robertson) 2856; action of ozone on (Harries) 2877; behavior of certain, toward Fehling's soln. (Margosches) 2881; recognition and estn. of metalloids in (Mandel) 3043; elec. effects accompanying decompn. of (Potter) 3167; rotatory dispersion of (Lowry) 3225; humic substances from (Beecroft) 3253; nutrition of aquatic animals by (Lipschütz) 3303; metal (Consortium, etc.) P 694; see also *Aliphatic compounds; Aromatic compounds; Compound; Arsenic compounds,* etc.

Organic evolution (Pike) 2397.

Organic matter, destruction by Kjeldahl method (Carpiaux) 40; influence on setting of cement (Benson) 138; and bacterial action in soils (Rahn) 499; influence on nitrification and denitrification in arable soils (Kossowicz) 500; modification of Kjeldahl

method for detg. N in (Wunder) 573; and disinfection of drinking water (Hairi) 677; detg. B in (Filippi) 901; in oil-shales (Robertson) 904; and secretion of diastase by fungi (Chapman) 923; detg., in water (Filippo) 944, 3110; drying (Allen) P 1098; pptg., from sewage (Miles) P/1360; of Pacific Coast kelps (Hoagland) 1525; utilization of, in septic and Imhoff tank sludges (Lipman) 1525; detg. S in (Krieger) 1590; microanalysis of (Dulesky) 1730; loss of, in cultivated soils (Swanson) 1961; of soil (Jodidi) 230 (Stewart) 833; effect on solubility of $CaCO_3$ and $MgCO_3$ (Gothe) 2275; purification of alc. exts. from maceration of putrefying (Magnin) 2748; I detn. in presence of (Krauss) 2913; influence on transposition and action of N compds. in soil (Gerlach) 2961; action of ureases in destruction of (Bordas) 3077; soil, as culture medium for *Azotobacter* (Mockeridge) 3082.

Organic technic (Müller) 1301.

Organosols of metals and hydroxides of Pt group (Amberger) 3159; prepns. with fats (Kalle & Co.) 3331.

Organs, ergotinine in, in ergot poisoning (Rosenbloom) 108; enzymes that decompose fat, lecithin and wax in (Porter) 212; detg. As in (Joachimoglu) 661; decomp. of hexosephosphoric acid and lactacidogen by press-juice of (Embden) 929; alc. absorption and oxidation by animal (Votz) 937; Fe in, in bronzed diabetes (Muir) 1198; retention of Fe in, in anemia (Muir) 1199; action of C_6H_6 and its side-chain homologs on hematopoietic (Bianchi) 1640; protective enzymes of blood after transplantation of (Goodman) 1640; feeding, with internal secretion (Gudernatsch) 1931; cholesterol in, in hunger (Rothschild) 2397; localization of Fe in, of pigeon (Chevallier) 2551; detg. creatine in (Janney) 2771; detection of C_6H_6 in (Joachimoglu) 2917; effect on antibody production of removal of (Hektoen) 3093; active principles (Fawcett) 3283; absorption of Fe from, after hemolysis (Muir) 3289; see also *Organ extracts*.

Orientation (Obermiller) 295; of holothurian by light (Crozier) 938; (Cohen) 2519.

Orthoclase, pseudomorph after (Hezner) 190; breaking down (Peacock) P 1010; contg. Ba (Tschermak) 1447.

Orthoformic acid, Et ester as alkylating agent (von Walther) 1911.

Orthophosphoric acid. See *Phosphoric acid*.

Oryzanin and nutrition of fermentative organisms (Kurono) 2791.

Osage orange, constituents of fruit (McHargue) 2270; as substitute for fustic (Kressmann) 2723.

Osazones and phototropy (Padoa) 1319.

Oscillation of indene double linkage (Courtot) 1745.

Oscillation valves, theory of (Willows) 2740.

Osier bark (Petz) P 2712.

Osmium as catalyzer for chlorate solns. (Hofmann) P 697; Die electrischen Metallfadenglühlampen aus Osmium (Weber, book) 1009; adsorption of C_2H_2 by colloidal (Paal) 2615.

Osmium alloys, with Pt (Zimmermann) P 2637.

Osmium hydroxides, colloidal tetrahydroxides (Kalle & Co.) P 1378.

Osmosis of caoutchouc solns. (Caspari) 170; elec. endo- (Ges. für Elektro-Osmose) P 1156, 2353, 2354; correction in osmotics (Berkeley) 1266; in soils (Lynde) 1524; ex-, from roots of anesthetized plants (Merrill) 2103; properties of muscle (Meigs) 2104; equil. between blood and milk (van der Laan) 2391; elec. endosmose (Elektro-Osmose) P 2840; osmotic properties of Ca and Mg phosphate in relation to those of living cells (Meigs) 3257; of ash of clam muscle (Meigs) 3302; see also *Electro-osmosis*.

Osmotic pressure of soil soln. and growth of wheat (Toulaikov) 1217; of alc. solns. (Price) 1416; of emulsions (Costantin) 1710; of emulsions and conc. in solns. of electrolytes (Bates) 1710; kinetic interpretation of (Ehrenfest) 1866; Liebig's idea (Osipov) 1866; of body fluids of amphibia (Brunacci) 1944, 2268; of juices of desert plants (Harris) 2102; of complex mols. (Lenard) 2174; of ions and mols. in aq. soln. (Bates) 2342; of body fluids of *Fundulus* (Loeb) 2390; coeffs. of, of *Bombyx mori* L. (Polimanti) 2947; demonstration of, exerted by lipins (Gies) 3078; adaptability of amphibia to external liquid media (Brunacci) 3103; of colloidal solns. (Cohen) 3159.

Ossein, As in (Cochet) 1133.

Osseomucoid distribution (Seifert) 3073.

Osteitis deformans (DaCosta) 3277.

Osteohemochromatosis (Teutschlaender) 3096.

Osteomalacia, puerperal (Liesegang) 2937; (Kranz) 3294.

Otto of rose, 352.

Ouabain, influence of temp. and concn. on heart's reaction to (Sollman) 1806.

Ovaries, action of exts. of, on surviving rabbit uterus (Fuchs) 106; and X-rays (Fraenkel) 107; assimilation of monosaccharides in ovariectomized dogs (Artom) 926; effect of ext. of pituitary body on (Pearl) 1932; ovarian factor concerned in recurrence of oestrous cycle (Marshall) 2932.

Ovens, use of washers and coolers with S (Pellet) 532; roasting or drying (Ridge) P 594; thermal insulation tests of elec. (Kennelly) 1153; economic operation of elec. (Gumaer) 1557; lab. steam drying (Levi) 1557; heat distribution in ceramic (Bigot) 1835; elec. enameling, 2974.

Overvoltage (Newbery) 176; (Crabtree) 409.

Ovovitellin (Rosmini) 809.

Oxalates, influence on the isolated heart (Salant) 1807.

Oxalic acid, metallic compds. with complexly bound (Werner) 34; detection (Sacher) 2043; dehydration and esterification of cyclohexanol and *p*-methylcyclohexanol by (Juéry) 2228; prep. of (Keimatsu) 2232; for bleaching leather, 2325; reduction of $KMnO_4$ by (Boutaric) 2344; as cleavage product of strychninolonic acid *a* (Leuchs) 2381; reaction common to, and nopic acid (Dorronsoro) 2522; detecting, in wine (Kreis) 2685; hydrazides and axides of (Curtius) 2765; *Penicillium* producing (Currie) 3083; (Portheim) P 3330; see also the various salts and esters of oxalic acid.

Oxalic anhydride, monodimethylosazone and monomethylphenylosazone (Folpmers) 1788.

Oxaloacetic acid, decomp. by microörganisms (Neuberg) 472; keto-enol equil. of, its esters and salts (Hantzsch) 3240.

Oxalodiaminoacetatochromic acid, K salt (Werner) 34.

Oxaluria (DeSandro) 1495; (Pincussohn) 1621.

Oxalylbisacetohydrazide (Folpmers) 1786.

Oxalylbisanthranilic acid, bishydrazone (Heller) 2546.

Oxalylbis - β - benzoylhydrazide (Folpmers) 1786.

Oxalylbis - β - dimethylhydrazide (Folpmers) 1786.

Oxalylbisethanesulfonamide (Franchimont) 294.

Oxalylbisethanesulfonomethylamide (Franchimont) 294.

Oxalylbisisobutyrylamide (Franchimont) 294.

Oxalylbis - β - methylphenylhydrazide (Folpmers) 1786.

Oxalyl chloride, action with N_2H_4 derivs. (Folpmers) 1785.

Oxalyldibensanilide (Mumm) 1486.

Oxalyldibenzo - o - toluidide (Mumm) 1486.

Oxalyldihydrocarvylamine (Harries) 2879.

Oxalyl - β - diphenylhydrazide (Folpmers) 1786.

Oxamyl azide (Curtius) 2765.

Oxans (Lidov) 59.

Oxazoles (Bachstez) 629.

Ox-gall, test for, in soaps (Steinitzer) 2717; standardization (Graber) 2968.

Oxidase reaction, naphthol blue, of nervous system (Katsunuma) 1187.

Oxidases of acid tissue (Reed) 1071; Ueber den mikroskopischen Nachweis v. Oxydase in Gewebeschnitten m. e. Anh. über Vitalfärbung (Kriegbaum, book) 1928; distribution in plants (Reed) 2261; in respiration (Reed) 2767; guaiacum in detection (Atkins) 2911; see also *Enzymes*.

Oxidation, anodic, of NH_3 in alk. media (Scagliarini) 33; of Cu in electrolytic soins. (Tolman) 44; of steel or Fe sheets (Carnahan) P 50; auto-, of limonene (Blumann) 86; of S compds. of coal, and of N in bomb calorimeter (Regester) 142; of Pb (Holley) P 157; simultaneous reduction and (Kötz) 207; of Fe compds. in soins. contg. humus (Maekinen) 231; catalysis (Willstätter) 308; of phenols (Pummerer) 316; effecting, reactions (Badische) P 361; of PbS (Dempwolff) 430; with Br by light (Ciusa) 453, 1173; hemopyrrole and scission of hemin by (Hahn) 463; of $MnCO_3$ by bacteria and fungi (Beijerinck) 471; Fe in respiration of sea urchin eggs—accelerated by Fe (Warburg) 487; of As dipping fluids (Holborow) 503; of N (Strong) 557; detg. Sb by, of antimonite (Gastaldi) 572; catalytic, of organic substances (Ewart) 630; destruction of cell structure and, in tissues (Battelli) 635; of MeOH (Asser) 663; catalytic, of NH_3 (Österreichischer, etc.) P 698; of coal (Porter) 704; auto-, of hydrazones (Busch) 805; of thiosulfates by bacteria (Lockett) 814; of sucrose by $KMnO_4$ (Powell) 914; of cholesterol by blood (Lifschütz) 917; alc., by animal organs (Votz) 937; by oils and fatty acids (Hyland) 1128; wet, of metals (Lambert) 1167; auto- (Ciamician) 1178, 2089; Unna methods for establishing oxidizing regions (Schneider) 1188; and activity of salvarsan serum (Stühmer) 1200; retardation of, of Fe by bases, $CrCl_3$ and chromates (Rohland) 1454; mechanism of biol. (Loew) 1488; of sulfides with KIO_3 (Dean) 1585; electrochem., of $N_2H_4.H_2SO_4$ and NH_4OH (Turrentine) 1586; of H_2S by bacteria (Jacobsen) 1629; catalysis in, of alkali sulfites (Saillard) 1700; plant, enzymes and (Begemann) 1791 (Hall) 2102; -reduction reactions (Dain) 1864; of alcs. in presence of FeO and ferrous salts (Doroshevskii) 1865; acceleration of, of Al by Hg (McClendon) 1866; of Fe or steel sheets (Maskrey) (Carnahan) P 1895; of Me groups of open-chain unsatd. compds. (Merezhkovskii) 1903; of keratin and cystin by $KMnO_4$ (Lissizin) 1919; of enzymes and pro-enzymes (Burge) 1920; of red corpuscles (McClendon) 1920; oxidizing power of oxyhemoglobin (McClendon) 1920; in egg of sea urchin (Loeb) 1943; of sulfide ores (Ireland) P 2055; theory of leather formation (Sommerhoff) 2160; contact action of water vapor and C in, of ferrous compds. (Doroshevskii) 2177; of cholesterol acetate with chromic acid (Windaus) 2246; in apple bark (Rose) 2396; by oxyhemoglobin and erythrocytes (McClendon) 2398; of As in dips (Chapin) 2419; of sulfites (Collett) P 2440; by SO_2 (Smythe) 2491; of soy bean oil (Taverne) 2716; biol. (Loevenhart) 2767; without addition of acid (Neidle) 2826; auto-, of lipoid substances (Ciaccio) 2906; utilization of formic and acetic acids produced by, of linseed oil (Fritz) 2988; of N by elec. discharge in presence of O_2 (Ehrlich) 3029; of amines (Suto) 3059; auto-, by light in the terpene series (Sernagiotto) 3067; auto-, of pulegone (Sernagiotto) 3068; relation of uricolysis to sub- (Goodridge) 3071; of cholesterol (Lamb) 3074; with plant chromogens (Wolff) 3084; of rosin (Paul) 3135; electro-, of Mn salts

(Sem) 3183; catalytic action of alkaloids on (Traube) 3252; purpurogallin-yields in, of pyrogallol (Bach) 3255; velocity of, in cells (Warburg) 3256; rate of, of enzymes (Burge) 3257; viscosity and retardation of (Traube) 3258; by H_2O_2 (Fette) 3301; of NH_3 (Landis) P 3339.

Oxidation products of maltose (Lewis) 453; of indigo series (Farbw.) P 1999; of pyrogallol (Nierenstein) 3229; new, of cholic acid (Pringsheim) 3234.

Oxides, emissivity of (Burgess) 13, 404 (Foote) 2348; new oxide in Java citronella oil (Spornitz) 78; recovering metal, from flue dust (Downs) P 259; melting refractory (Boehm) P 701; action of ammono acids on metallic (Franklin) 1016; catalytic decomp. of borneol in presence of metallic (Aloy) 1047; reducing metal, by (Kayser) P 1297; heat of formation and polymerization of (Mixter) 2478; (Bambach) P 2804; see also *Ethers*.

Oxidizing agents, influence on immune reactions (Arkin) 1935; action on antibodies (Belin) 1938; action of some, on cellulose (Moore) 3365; see also *Oxidation*.

1,4-Oxidohexane (Franke) 910

1,5-Oxido-octane (Franke) 910.

Oximes, isomerism of—absorption spectra, etc. (Brady) 197; isomerism of (Brady) 205, 603; alkyl ethers of some (Alessandri) 1045; $C_7H_4ONBr_3$ (Fuchs) 1464; new rearrangement in, of certain ketones (Leuchs) 3244.

Oximino derivatives of cyclohexane series (Kötz) 621.

Oxonium bases, alkaline (Kehrmann) 324.

Oxonium compounds, attempt to resolve (Levy) 63; (Kendall) 908; (Rördam) 1063; (Favorskii) 1471; of H_2SO_4 with ethers (Chelintzev) 1749.

"Oxonium hypothesis" (Raikow) 3086.

Oxozonides of cyclopentene (Harries) 2877.

Oxy-acetylene welds (Campion) 287 (Smith) 1455; burner (Cooper) P 1410; Welding and Cutting (Swingle, book) 1455; Text-book on Welding and Cutting Metals by (book) 1894.

Oxycellulose (Bancroft) 964; in linen goods (Saget) 1394.

Oxychlorides, detg., in liquor ferri sesquichlorati (Romijn) 2285.

Oxycholesterol in brain (Rosenheim) 1193.

Oxycholine derivatives, action on purine metabolism—therapeutic application (Burgsch) 2778.

Oxycodeinone and oxime, etc. (Freund) 615.

Oxyconessine (Burn) 659.

Oxycyanogen. See *Ozan*.

2 - Oxy - 6,9 - dimethyl - 8 - thiopurine (Johns) 2078.

Oxygen, testing purity of 1; ale. fermentation of sugar by atm. (Buchner) 94; tooth powders (Ligon) 122; effect on pig Fe (Johnson) 194; in steel (Pickard) 194; wave lengths of lines of (Clark) 264; electrolytic 266, 2189; content of open-hearth steel (Pickard) 285; and unsatd. compds. (Willstätter) 308; microchem. test for, place in tissues (Drury) 326; absorption by coal (Winmill) 365, 1382; propagation of flame in limit mixts. of CH_4, N and (Burgess) 379; solubility in serum of *Limulus polyphemus* (Alsberg) 487; modern, ind. (Wagner) 515; subcutaneous injection of (McCrae) 636; hypotonic medium and, breathing of sharks (Backman) 664; detg., "consumed" for water and sewage (Batek) 678; heat of combination of, with hemoglobin (Reymond) 818; absorption by linseed oil (Darner) 970; v. p. and critical pt. of (Onnes) 988; Zeeman effect for series lines of, triplet λ3947 (Voigt) 1002; removal from Et_2PO (Collie) 1469; destruction of complement and presence of (Jacoby) 1506; detg., absorption of drying oils (Waele) 1551; equil. in system Pb–S–O (Reinders) 1564; basic properties in ethers (Chelintzev) 1755; higher valences in org. compds. (Chelintzev) 1755; catalytic influence of kaolin on combination of H and (Joannis) 1866; tension of respired air (Dallwig) 1932; displacement by, of CO from combination with hemoglobin (Nicloux) 1934; detg. biochem., demand (Lederer) 1956; in blood in uricacidemia (Preti) 2107; content of atm. (Leduc) 2169; ozonization of liquid (Warburg) 2348; detg. critical consts. (Cardoso) 2474, 2828; absorption of ultraviolet radiation by (Warburg) 2480; in metallurgy (Johnson) 2500; intermediate products of alc. fermentation in, respiration (Ivanov) 2548; relation of, tension of atm. to combustion (Dallwig) 2828; Ueber den Energieumsatz bei photochemischen Vorgängen in Gasen—Absorption ultravioletter Strahlung durch Sauerstoff (Warburg, book) 2836; action of Ra rays on mixts. of arsine and (Reckleben) 2837; reflex action of, content of water on respiration of fishes (Petrik) 2947; detg. O demand (Hale) 2957; Na silicate as preservative for prepa. evolving (Kind) 2971; density (Germann) 3006; activation by Pt (Eggert) 3014; dispersion of air and, in infra-red (Stätescu) 3022; b. p. (Kaye) 3161; blood changes produced by N_2O and, anesthesia (Casto) 3301. *Patents:* Electrolytic production (Griffin) 27 (Soc. Oxy. Franc.) 270 (Levin) 2037, 2741 (Sürth Ges.) 2489 (Burdett) 3034; combining with N (Wolcott) 27; removing free, from H_2O (Gans) 130, 697, 3314 (Walther) 2683; from air (Bergfeld) 237, 698 (Simon) 517 (Barschall) 2299 (Norsk Hydro, etc.) 2804; from $NaBO_3$ (Budai) 359; generating (Danckwardt) 696 (Schalenkamp) 848 (Schaefer) 2805; sepg. N and (Gue) 696; generator (Weston) 1102 (Deut. Licht-Ind.) 1263 (Griswold) 1832 (Cram) 3333; removing, from gas mixts. (Siemens & Halske) 1231; explosive cartridge contg. liquid (Claude) 1249; washing prep. (Sieboid) 1402; active (Bender) 1537; baths (Hahn) 2570; re-

moving, from cast Fe (Johnson) 2638; production (Kriegsheim) 3119.

Oxygen, analysis in water (Winkler) 674, 1956 (Elvove) 2117; in steel and W (Johnson) 754.

Oxygen compounds with N (Bender) P 1101, 2576; action of $TiCl_4$ on org. (Rosenheim) 1773; with halogen (Skrabal) 2480; with Ti (Farup) P 3121; of hydrocarbons (Badische) P 2588.

Oxyhemoglobin, oxidizing power of (McClendon) 1920, 2398.

Oxy-hydrogen burner (Cooper) P 1410.

2-Oxy-6-methylaminopurine (Johns) 2078.

2 - Oxy - 6 - methylmercaptopurine (Johns) 2078.

Oxymorphine, detection in presence of morphine (Grimbert) 1224.

Oxynitrilase, synthetic and hydrolytic (Krieble) 2660.

Oxyphosphasobenzene and derivs. (Michaelis) 1032.

Oxyphosphasobenzene chloride and derivs. (Michaelis) 1032.

Oxyphosphaso compounds (Michaelis) 1031, 1032.

Oxyphosphasotoluene, *o*- and *p*- (Michaelis) 1032.

Oxyphosphasotoluenepiperidide and derivs. (Michaelis) 1032.

Oxyphosphaso - *p* - toluenetoluide chloride (Michaelis) 1032.

Oxypinenes (Waters) 1366 (Blomén) 1769; therapeutics and chem. of (Blomén) 2792; pharmacy (Blair) 2969.

Oxyproteic acid, estn. in urine (von Furth) 2917.

2-Oxypyrimidine salts (Johnson) 2656.

3-Oxy(1)thionaphthene, syntheses of derivs. of (Smiles) 3232.

2-Oxy-6-thiopurine (Johns) 2078.

Ozocerite (Herrnhut) 1256.

Ozone, behavior of formyldesoxybenzoins toward (Scheiber) 301; dissolved (Bürger) 767; behavior of unsatd. phenols and phenol ethers toward (Harries) 1052; photochem. effect of, solns. in H, N and He (A. B.) 1141; and phenols with unsatd. side chains (Witt) 1181; treating fibers with (Gminder) P 1550; in art. ventilation (Feldner) 1959 (Greene) 2414; for disinfection of air (Galli-Valerio) 1959; action of silent elec. discharge in, formation (Lechner) 2737; action on org. compds. (Harries) 2877; photochem. reactions in mixts. of H and (Weigert) 3013; oxidation of N by elec. discharge in presence of (Ehrlich) 3029; (Gries.-Elek.) P 3177; in air of Bucharest (Minovici) 3313; see also *Water, purification of (ozone).*

Ozonides of pinene, cyclohexene, etc. (Harries) 2877.

Ozonization, air (Franklin) (Hoffman) (Allen) 113; influence of wave length and pressure on photochem. (Warburg) 883; of liquid O_2 (Warburg) 2348.

Ozonizer (Darling) P 563; (Gruner) P 761; (Quain) P 2352; electrode for (Steere) (Knox) P 1011; (Tagueeff) P 1279; (Goldberg) P 1410; (Dumars) P 2625; elec. (Freet) P 3176; (Gries.-Elek.) P 3177.

Packing, dustless (Bechstein) 258; absorbent material for C_2H_2 (Wilkinson) P 371; plantation rubber (Schidrowitz) 1134; for valve stems (Daum) P 1374; for axle journals (Warrell) P 2309; (Puritas Co.) P 3120; lubricating, for shafts (Barberis) P 3338; piston, for fire extinguishers (Harrison) P 3340.

Paint, progress in, ind. (Ragg) 157; testing of vehicles 247; analysis (Anon.) 247, (Ladd) 1696; soy bean oil for 386; defects (Thompson) 530, 967; autohydrolysis of glycerides of (Gardner) 866; comp. of vapors (Klein) 969; for steel 969; reflection from (Bell) 969; Pigments and Mediums of Old Masters (Laurie, book) 972; for concrete (Ahrens) 1125; luminous (Crivelli) 1253; Chem. of, and Painting (Church, book) 1551; Manual of Oils, Resins and (Ingle, book) 1551; 1906 test fence (Ladd) 1695; clay in, manuf. (Koch) 1696; used in machine shops (Fish) 1847; softening and sapon. of white pigment 1848; for limestone and cement 1848; to prevent electrolysis in concrete structures (Gardner) 1848; field gray (Zimmer) 1848; vapors from drying (King) 1848; Manuf. of (Smith, book) 1849; Pb compds. in 1999; vehicles as protective agents against corrosion (Toch) 2000; white 2154; curious phenomena (Gardner) 2154; N. Dakota, laws 2316; prohibition of Pb, in Gt. Britain 2317; definitions of terms used in, specifications 2458; progress in ind. in 1914 (Fahrion) 2458; legislation in Ga., 2459; use of flaming arc in, testing (Mott) 3130; detection of Mn in (Sacher) 3134; (Grempe) 3135; poisoning by vapors from (Grimaldi) 3297; Al, for wooden fermenters (Heuss) 3325. *Patents:* Mixts. for addition to (Bessette) 157; fire-resisting (Henrich) 157; binding-agent (Bössenroth) 158; (Plüss) 158; mixing and straining (Rape) 158; (Wassermann) 158; (Wissing) 158; for metals (Smith) 248; (Lessard) 530; fire-resisting, for metals (Scott) 725; for ships' bottoms (Comstock) 725 (Paternò) 1552; rust-preventing compns. (Howard) 726 (Daumiller) 1126 (Zschokke) (Elliot) 1551 (Standard Lack- und Farbw. etc.) 1552; for concrete, etc. (Van Westrum) 854; (Turkin) 973; Na silicate as, vehicle (Vail) 1125; atomizing, on a surface (Levy) 1125; (Unglaub) (British Pat. Surbrite Co.) 1126; on brewing vessels (Smallwood) 1223; for inside of boilers (Chadd) 1254; (Wassermann) 1254; for wood or metal (Chadd) 1398; (Comp. franc., etc.) 1398; (Eichler) 1398;

(Turkin) 1398; "cold water" (Vail) 1832; body for (Quick) 1849; (Intern. Color & Chem. Co.) 2001; weatherproof (Brenneisen) 2155, 2156; (Jamson) 2318; paste tempera colors (Bössenroth) 2319; films (Oel- und Farbfilm-A.-G.) 2319; color atomizer (Heinrich) 2320; (Matthes) 2459; metallic (Brit. Pat. Surbrite Co.) 2460 (Finkler) 2601; priming, for wood (Greene) 2715; for cement or concrete structures (Macnichol) 2819; for metal car bodies (McDonnell) 2819; waterproof (Kemp) 2988.

Painting, glass (Padelt) P 2443.

Paintings, cleaning or restoring oil (Anilin-Fab.) P 387; photochem. and photomechanics at exposition of book dealers and painters at Leipsic (Cobenzyl) 564; imitation oil (Brookes) (Sauber) P 1228.

Paint remover. *Patents:* (Ellis) 158, 1126 1849, 2317, 2459, 2601; (Wilson) 1126; (Halman) 1398; (Nienstadt) (Hambrock) 2317; (Alexander) 2318; (Harris) 2459; (Schwimmer) 2819; non-inflammable (Whigelt) 3369; see also *Coating; Varnish remover.*

Palladium and H (Sieverts) 12; detg. H in gas mixts. by colloidal (Burrell) 38; diffusion of H through (Holt) 877; spectrum (Paulson) 881 (Kail) 2481; influence on photoelec. effect of, charged with H (Stumpf) 1145; detg. Ag in ores and concentrates contg. (Smoot) 1442; elec. cond. of, during occlusion of H (Beckmann) 2026; velocity of hydrogenation of tetramethylbutinediol in presence of colloidal (Zal'kind) 2067; soly. in H_2SeO_4 (Hradecky) 3183.

Palladium, analysis (Smoot) 1441; sepn. of Pd and Sn (Gutbier) 1726, 1727.

Palladium alloys, soly. of H in, with Au, Ag, and Pt (Sieverts) 3006.

Palladium deposits in southern Nevada (Knopf) 1591.

Palladium selenate (Hradecky) 3183.

Palladonitrites of metals fixed by org. bases (Scagliarini) 33.

Palladosalicylic acid and its salts (Barbieri) 298.

Palm wine (Bachilli) 1527; Nipa, swamps as sources of alc. 1658; fruit (Sewell) P 2408.

Palmarosa oil (Schimmel & Co.) 2692.

Palmitates, physico-, chemistry of (Arndt) 745.

Palmitic acid, nonanyl and methylbenzylcarbinyl esters (Kenyon) 64; Mg salt (Haupt) 295.

Palm kernel cake (Murray) 828; and meal 1205; as feed for milk production (Völtz) 2774.

Palm oil (Heiduschka) 1400; from cohune palm nut 1400; compn. (Heiduschka) 2820; (Kregten) 3139.

Pampas formation (Walther) 904.

Pancreas, influence of alkali on, glands (Vorobyev) 104; $NaHCO_3$ and, secretion (Wilbrand) 223; diastase in feces in diseases of (Brown) 482; in glucose absorption (Körösy) 645; functions (Loeb) 650, 2664; effects of, on sugars (Woodyatt) 926; pancreatic organotherapy and ketogenesis (Kirk) 926; achylia of (Orlov) 933; destruction of pancreatic enzymes by heat and substances which impede such action (Lombroso) 1068; influence of vagus on secretion of (Von Anrep) 1073; adipose necrosis of (Verdozzi) 1348; duodenal content analyses as index of disease and functional activity of,—fat and N metabolism in diseases of (Crohn) 1639; nuclear digestion and uric acid excretion with occlusion of pancreatic duct (Atchley) 1802; depancreatization and glucemia (Kleiner) 1933; reaction of (Long) 2666; secretion (Einhorn) 2670, 3098; enzymes of (Mellanby) 2769; digestive activity and compn. of diff. fractions of (Long) 2934; physiology of rabbit (Grützner) 2935; silicic acid in human,—wt. of, at various periods of life (Schulz) 2936; action of high frequency current on activity of pancreatic amylase (Punnett) 3072; enzymic power of duodenal contents as means of diagnosis of functional activity of (Crohn) 3098; relation of adrenals to (Mann) 3280; ferment detn. in tuberculosis (Gray) 3294.

Pancreatectomy, digestion and absorption of protein and fat in (Cruickshank) 1800; fermentative activity of blood and organ tissues after (Stawraki) 2907; influence of Na_2CO_3 on glucosuria, hyperglucemia and respiratory metabolism of dogs after (Kramer) 3091.

Pancreatic juice, activation and proteoclastic power of (Zunz) 212; and fat absorption (Terroine) 645; in fat digestion (Terroine) 648; action of serum on lipase of (Shaw-Mackenzie) 2769; carbohydrate enzymes of (Mellanby) 2769.

Pancreatic preparations, ext. (Lepitit, etc.) P 724; ext. and sugar mobilization in the liver (Dresel) 817; (Sherman) 1921; ext. in glucosuria (Massaglia) 3295.

Pancreatin, standardization (Graber) 2968.

Panicularia (Alsberg) 2773.

Papain (Heyl) 235; (MacMillan) 1529; (Pratt) 2421.

Papaver, *P. somniferum* (Mueller) 94; *P. orientale* (Klee) 298 (Gadamer) 300.

Papaverine, reduction products of (Pyman) 1310; synthesis of derivs. of (Freund) 1487; in animal organism (Zahn) 1512; color reactions (Warren) 2967.

Papaya, compn. of Hawaiian (Thompson) 3104.

Papayans, bell (Mannich) (Lewin) 1660.

Paper, cigaret (Strobach) 148 (Anon.) 1113; sizing (Anon.) 245, 713, 1390 (Cyster) 2708; disposal and utilization of, factory waste (Splittgerber) 376; literature (Schwalbe) 713; moisture in (Sutermeister) 713; technology of fibers (Bromley) 713; *Arundo donax* cane as fiber for (Beveridge) 714; material from abattoir 714; talc in, 714; dyeing and sizing

mercerised cotton fabric (Heberlein & Co.) P 3134.
Pavine (Pyman) 1310.
Paving, relative values of materials for (Tillson) 140; bituminous (Blanchard) 240 (Amies) P 2703; pine, blocks (Teesdale) 240; treated wood, in U. S. (Teesdale) 520; -slabs from slag (Chiapponi) P 1103; treated wood block (Anon.) 1236 (Hess) (Dutton) 2140; compn. (Francis) P 1238 (Lovegrove) P 2303; concrete, after 20 yrs. (Inskeep) 1381; sulfite liquor binder for (Pollacsek) P 1391; asphaltic materials for (McLaughlin) 2138; road-, block (Griffiths) P 2580; broken concrete as aggregate for 2702; allowable max. penetration of asphalts for bituminous (Pullar) 2977; see also *Asphalt; Roads*.
Pavy-Kumagawa-Suto method for detg. sugar (Hatta) 1342.
Peaches, effects of brown-rot fungus on compn. of (Hawkins) 1495; soils of Mass. and Conn. with reference to (Wilder) 1650; kernels in marchpane (Lehmann) 2783.
Peanut oil, flavoring (Sulzberger) 1813; detg., in olive oil (Lund) 2676.
Peanuts, food mixt. of honey and (Root) P 3310.
Pearls (Beutel) 773.
Peas, amino N in Alaska (Thompson) 925.
Peat, utilization in Italy (Rossi) 116; origin (Davis) 283; bog of Codigoro 365; production in 1913 (Davis) 520; bacterized 1218; oils from (Perkin) 1541; Bogs and Fixation of Atm. N (Benetsch, book) 1720; Canada, bogs, 1838; compn. of, tar (Bornstein) 1991; Die Aufgaben der technischen Moorverwertung (Keppeler, book) 1991; adsorptive power of (Rohland) 2831; ind. uses of (Verschoor) 3349; significance of, in ind. (Verschoor) 3349; fibrous (Traubenberg) 145; dehydrating (Schwerin) 369 (Rigby) 369, 708, 2811, 3126 (Torfwerk Schülp) 859 (Lambrecht) 1139 (Adam) 2145 (Brune) 2306 (Jabs) 2449 (Meyer) 2472 (Ford) 2585 (Wetcarbonizing Ltd.) 2812; (Rigby) 370; treating (Dickson) 371 (Testrup) 522, 2447; press (Hirsch) 522; distn. of (Plauson) 523; prepg. (Prioleau) 709; bldg. material from (Schliske) 855; blocks (Brown) 1242; working (Hinrichsen) 1243; (Rigby) 1992; briqueting (Testrup) 1685 (Ekenberg) 2306; as fuel (Rigby) 2306; gas and by-products from (Rigby) 2306; heating (Intern. Power Co.) (Rigby) 2308; endosmosis of (Elektro-Osmose- A.-G.) 2353; grinding (Verhoeven) 2449; plastic mass from (Gasser) 2576; pressure carbonization of (Ges. für Industriellen) 3355.
Pebbling, starch (Anderson) P 1132.
Pectins (Fellenberg) 488; gelatinization of (Haynes) 632.
Peel, preserving (Penn) P 1082.
Pegmatite, gahnite in (Eskola) 575; Cu, lode of Otjozonjati, German Southwest Africa (Westphal) 1733; schist (Emerson) 2634.
Pelargona, dyestuff of scarlet (Willstätter) 1304.
Pelargonidin and tetra-Me ether chloride (Willstätter) 787; salts and pseudo base (Willstätter) 1304.
Pelargonine salts (Willstätter) 1304.
Pellagra, protective enzymes against corn protein in blood in (Nitzescu) 98; sugar-cane products as cause of (Blosser) 936; cerebrospinal fluid in (Lorenz) 1502; etiology (Carbone) 2930; causation and treatment of (Shaw) 2938.
"Pellidol" (Kottmaier) 1807.
Pelts. See *Hides; Skins*.
Penicillium, development of *P. glaucum* (Waterman) 1929; enzymes in mycelia of *P. glaucum* (Franceschelli) 2101; in production of ellagic acid from gallylglycine (Nierenstein) 2919; oxalic acid-producing (Currie) 3083; differentiation among species (Woeltje) 3268.
Pentaacetylethylcyclohexanehexol (Griffin) 2092.
Pentaacetylmethylcyclohexanehexol (Griffin) 2091.
Pentabromoacetone (Clusa) 453.
Pentabromobenzene (Eckert) 1761.
β - Pentacarbomethoxyglucose and carbethoxy deriv. (Zemplén) 2252.
Pentachloro - o - phenyltetrachlorobenzoic acid (Eckert) 1465.
Pentadecatetrone (Harries) 253.
Pentadesma kerstingii (Wagner) 974.
Penta - [3,6 - dimethoxybenzoyl - p - hydroxybenzoyl]glucose (Mauthner) 1909.
Pentaerythritol, hydrocarbons from (Filipov) 1904.
Pentahydroxyditolyl (Henrich) 1776.
Pentahydroxyflavone and pentaacetyl deriv. (Bargellini) 2237.
β - Pentaisovalerylglucose (Zemplén) 2252.
Pentalaurylglucose, α- and β- (Zemplén) 2252.
2,3,4,6,4' - Pentamethoxybenzoylacetophenone (Bargellini) 2238.
Pentamethylenebis - [α - imino acids] (Schlezinger) 74, 3053.
Pentamethylenebis[α - iminoisobutyric acid] and derivs. (Shlezinger) 3054.
Pentamethylenebis - [α - iminoisobutyric nitrile] and corresponding acid and derivs. (Schlezinger) 74.
Pentamethylenebis[α - iminophenylacetic acid] and derivs. (Shlezinger) 3054.
Pentamethylenebis - [α - iminophenylacetonitrile] and corresponding acid and derivs. (Schlezinger) 75.
Pentamethylenebis[α - iminopropionic acid] and derivs. (Shlezinger) 74, 3054.
Pentamethylenedicarbamic acid di-Et ester (Curtius) 1606.
Pentamminochloroplatinates (Chugaev) 3181.
Pentanes from "wet" natural gas (Schill) P 125.
Pentane - α,α,ε,ε - tetracarboxylic acid, action of chloromethyl ether on Na deriv. of Et ester (Simonsen) 2516.

Pentapalmitylglucose, α- and β- (Zemplén) 2252.
β - Pentastearylglucose (Zemplén) 2252.
β - Penta [tricarbomethoxygalloyl] glucose (Fischer) 80.
Penta [trimethylgalloyl] glucoses, α- and β- (Fischer) 79, 80.
Pentavanillinferric acid K salt (Weinland) 2083.
Pentazidoacetic acid Ag salt (Lifschitz) 1614.
Pentazidoacetic hydrazide and Ba salt (Lifschitz) 1614.
Pentazole silver, AgN_5 (Lifschitz) 1615.
Pentazole compounds, synthesis (Lifschitz) 1614.
Pentosans, estn. of (Cunningham) 214.
Pentoses in plant exts. (Davis) 922; detg., in wine (Schaffer) 1364; mutarotation of phenylosazones of (Levene) 1769.
Pentosuria (Zerner) 651; alimentary (Rosenbloom) 3278.
Pentoxazoles (Gabriel) 2876.
Peonidine salts (Willstätter) 1307–8.
Peonine chloride (Willstätter) 1307.
Peony coloring matter (Willstätter) 1307.
Pepper, structure of (Wallis) 1945; analyses of white (McGill) 2676; microscopy of, and its adulterations (Pooth) 2948.
Peppermint oils (Woehlk) 351.
Pepsin in prescriptions (Vleurinck) 235; optical rotation, adsorption and centrifugalization of, solns. (Rakuzin) 1488; digestive power of (Grützner) 1624; assay (Delaunay) 2128; Dr. Caldwell's syrup (Puckner) 2129; abolishing parallelism between chymosin and, action—diff. sensitiveness of, and of chymosin towards alkali (Hammarsten) 2904, chem. nature (Bokorny) 2907; hydrolysis of proteins by (Anderson) 2908; estn. (Gesellschap) 2915; standardization (Graber) 2968; adsorption from aq. soln. by Al_2O_3 (Rakuzin) 3071; influence of phenols and phenolcarboxylic acids on hydrolysis of proteins by (Guglialmelli) 3075; in fasting stomach (Dorner) 3254; -rennin question in ripening of cheese (Dam) 3306.
Peptides, action on pancreatic juice (Zunz) 212.
Peptization, quantity of peptizing agent and properties of hydrosols (Zsigmondy) 546; of albumin sols (Brossa) 1415; in tanning solns. (Moeller) 2464; of Cr_2O_3 (Bancroft) 3160.
Peptolysis, enzymic, in germinating seeds (Court) 1345.
Peptones, ninhydrin reaction of (Fränkel) 639; assimilation by plants of N in form of Witte (Petrov) 682; effect of Witte, solns. (Woolley) 932; detg. S in (Redfield) 1069; purification of crude silk, for bacteriol. purposes (Hall) 1342; (Bernardi) 1490; lactose, media for bacteriol. exam. of water (Chamot) 2678–9; analysis (Colwell) 2916; optical rotation of albumin-, and its adsorption by Al_2O_3 (Rakuzin) 3071; hypoglucemia (McGuigan) 3100; syntheses of, by enzymes (Abderhalden) 3258; prepn. from beer yeast (Vlahuta) 3266; effect on circulation (Mautner) 3285; appearance of protective enzymes after parenteral administration of (Bassani) 3289.
Peracids (Consortium, etc.) P 355, 356; org. (D'Ans) 2542.
Peraquin "fest" 954.
Peraquin "Henning" 954.
Perborates (Henkel & Cie) P 2577; anodic behavior of alk. solns. (Polack) 3033; for bleaching (Schmidt) P 3366.
Perbromobenzoylbenzoic acid (Eckert) 1761.
Perca globulin (Folin) 1944.
Perceric oxide derivs. (Meloche) 2844.
Perchlorates, explosives 151; isomorphism with permanganates (Scagliarini) 896, 1285.
Perchlorobenzoylbenzoic acid and derivs. (Eckert) 86, 1465.
Perchlorophenylbenzoic acid (Eckert) 86.
Percussion, figures on mica (Wetzel) 281.
Perfumes, essential oils used in (Mann) 351; review (Reclaire) 509; detg. alc. in (Anon.) 692 (Zuco) 2126; soap (B. B.) 728; in 1913 (Fachini) 844; sandalwood oil in (Mann) 844; Manuale del profumiere (Rossi, book) 1225; progress in chemistry of (Müller) 1365; art. (Groat) 1531; recent work on (Fachini) 1662; talcs and kaolins in, ind. (Rohland) 2322; manuf. of alc. for (Stockelbach) 2688; synthetic (Dupont) 2688; review (Reclaire) 2965; prepn. and manuf. of (Askinson, book) 3329.
Perfusion, epinephrine and perfusing solns.—equil. in salt perfusing solns. (Burridge) 3101.
Pergamyn, mfg. (Marschalk) 965.
Perhalogenation of anthraquinone (Eckert) 1761.
Periodicity, periodic system and, in properties (Vosmaer) 3147.
Periodic system (Rydberg) 540; radio-elements and (Fajans) (Broek) 551; rare earths in (Meyer) 734; (Swan, book) 886; radioactivity and (Venable) 1428; 8th group of (Büchner) 1561; (Dushman) 2169; modification (Bilecki) 2999; secondary periodicity (Biron) 3000; and periodicity in properties (Vosmaer) 3147; and heat of fusion (Guzman Carrancio) 3148.
Peristalsis, $MgSO_4$ and (Meltzer) 2401; effects of X-rays and Bi taken *per os* on gastric (Dietlen) 3282.
Peritoneum, lipoids of endothelium (Tait) 1934; injections of proteins into (Woolley) 2109.
Perkin medal award 889.
Permanganates, isomorphism with perchlorates (Scagliarini) 896, 1285.
Permeability of gravel concrete (Withey) 138, acid and (Osterhout) 327; high, in Fe (Wilson) 410; of bladder (Nicloux) 630; of blood corpuscles to sugars (Masing) 635; effect of alkalies on (Osterhout) 810; of intestine for

cow casein (Modigliani) 814; of cells (McClendon) 1338 (Girard) 1919; normal and abnormal (Osterhout) 1495; narcotics and, of red blood corpuscles (Joel) 1640; measuring impermeability of cloth (Wosnessensky) 1694 (Le Roy) 2595; alterations of protoplasm (Osterhout) 1790; effect of cations on (Osterhout) 1791, 2257; changes in, of plasma membrane by KCN (Krehan) 2102; of gelatin to photographic developer contg. sugar (Maldiney) 2626; to glucose of red corpuscles of splenectomized dogs (Donati) 2767; action of anesthetics in preventing increase of cell (McClendon) 2780; preservation of life of frog egg and initiation of development by increase in (McClendon) 2780; tests of renal (Gates) 2938; effect of irritation on, of meninges for salvarsan (Stillmann) 2941; of cell membranes (Bayliss) 3254; of internal cytoplasm of animal and plant cells (Kite) 3257.

Permeameter, Koepsel (Burrows) 2.

Permolybdic acid, cryoscopy of org. complexes of (Mazzucchelli) 878.

Permutite in water purification (Don) 676; diffusion of ions in (Schulze) 746; art. zeolite (Kocsor) 944; water softening by Lassen-Hjort and, process 1207; Ueber, dessen Anwendung und die mit ihm gemachten Erfahrungen (Kolb, book) 2958; water softening by (Hoover) 2784; see also *Water, purification of.*

"Peroxid" in combating Peronospora (Gvozdenovic) 1963.

Peronospora, combating (Bretschneider) 1220 (Gvozdenovic) 1963.

Peroxidase, inactivation by heat of, in milk (Zilva) 813; as reagent for photolysis by chlorophyll (Chodat) 2099; in beer yeast (Bach) 2659; in skins (Onslow) 3069; oxidation of pyrogallol by H_2O_2 and (Bach) 3255.

Peroxidase reaction, preservatives and, of milk (Grewing) 1080; sensitiveness of (Bach) 1488; of rabbit liver (Bunting) 2108.

Peroxides, Inorg. (Girsewald, book) 38; soaps (Wolffenstein) P 975; org. (Girsewald) P 1830; decompn. of, bleaching baths (Wintsch) 1996.

Perphosphates, calcining of $MgNH_4PO_4$ in analysis of (Vecchi) 898.

Persalts, Inorg. (Girsewald, book) 38.

Perspiration, elimination of NaCl in (Viale) 97; "insensible" (Galeotti) 651; phys. (Loewy) 651.

Persulfates, theory of, reduction (Lüppo-Cramer) 30; (Bayer & Co.) P 415, 1155; prep. of H_2O_2 from (Cambi) 560; reduction with (Stenger) 762.

Persulfuric acid (Bayer & Co.) P 415, 1155; prep. of H_2O_2 from (Cambi) 560.

Pertetraboric acid and its salts (Auer) P 1834.

Pertussis (Olmstead) 2399.

Petrography, Kewagama lake, Quebec (Wilson) 283; graphic (Adams) 581; of Kodurite series of India (Cross) 581; Crowsnest volcanics (MacKenzie) 582; of Libia (Artini) 583; Penmaenmawr intrusions (Sargent) 583; composite vein in northern Finland (Hackman) 1161; in region of fracture zone of Erzgebirge (Michel) 1448; of volcanic soils (Fry) 1649; of South Norway pyrite deposits (Falkenberg) 1733; Sardinian (Washington) 1734; classification (Cross) 1890; of Java and Celebes (Iddings) 2049; satn. in (Scott) 2049 (Shand) 2049, 2862; in valley of "Chisone" (Grill) 2209; petrographic methods in analysis (Fry) 2361; petrographic provinces (Stark) 3046.

Petroleum, transformer oils (Wilson) 145; I no. of (Smith) 157; solid (Behrend) 243; hydrogenation of oils and fatty acids from (Colletas) 244; fields of Mexico (Ordonez) 283; optical activity of (Traubenberg) 372, 1993 (Engler) 1110 (Marcusson) 1545; Mineral Oils and their By-Products (Redwood, book) 374; (Hiscox, book) 523; ind. in 1913 (Singer) 523; ind. uses (Dunn) 523, 1389; Well Boring (Isler, book) 523; varnishes contg. 530; measuring level of water in, reservoirs (Freund) 710; exhibit at Panama-Pacific exposition 859; viscosity of gas oils (Hendrickson) 859; origin of (Chautard) 904 (Mabery) 1109 (White) 1291; History and Romance of, ind. (Henry, book) 963; reconnaissance of oil prospects of northwestern Oregon (Washburne) 1021; history of 1109; influence on elec. cond. of heavy hydrocarbon oils of presence of soaps of naphthenic acids and of phenols (Holde) 1109; trade regulations 1111; vaporization of—use of oil burners in foundries (Irinyi) 1111; manuf. of shale oils (Perkin) 1111; explosion of kerosene lamps 1117; ind. in Alsace (Schultz) 1245; peroxidized kerosene as motor fuel 1245; Chemistry of, and its Substitutes (Tinkler, Challenger, book) 1245; petrol substitutes (Lewes) 1389; testing adhesiveness of Calif. road 1540; ind. in 1912–13 (Kissling) 1545; illuminating power of kerosene (Kunerth) 1688; naphthenic acids in Baku (Pyhälä) 1842; Exam. of Hydrocarbon Oils (Holde, book) 1852; ore furnace 1891; Practical Oil Geology (Hager, book) 1891; Researches sur la toxicité du petrole et quelque-unes de ses actions physiologiques (Leguidic, Turlais, book) 1943; removal of oil from condensation water (H. W.) 1954; phys. consts. of gas oils and derived tars (Rittman) 1991; Technologist's Pocket Book (Redwood, Eastlake, book) 1994; phys. consts. of, distillates (Rittman) 2308; of S. Phenylnaphthophenazonium, monoamines derived from (Kehrmann) 802.

Phenyl α-naphthyl ketone, oxime (Betti) 2089.

1 - Phenyl - 4 - α - naphthylsemicarbazide and azo compd. (Oliveri-Mandala) 71.

2 - Phenyl - 4 - *o* - nitro - *p* - acetoxy - m - methoxybenzylideneoxazolone (Bain) 201.

α-Phenyl-*o*-nitrocinnamic acids, stereoisomeric, and derivs. (Stoermer) 1756.

Digitized by Google

2 - Phenyl - 4 - *o* - nitro - *m,p* - dimethoxy - benzylideneoxazolone (Bain) 201.
Phenylnitroindone and scission products (Bakunin) 2239, 2240, 2387.
2 - Phenyl - 4 - *o* - nitro - *m,p* - methylenedi - oxybenzylideneoxazolone (Bain) 201.
Phenylosazones, mutarotation of, of pentoses and hexoses (Levene) 1769.
5-Phenyloxazole and salts (Bachstez) 629.
Phenyloxyphosphazopseudocumene (Michaelis) 1032.
Phenyloxyphosphazotoluene, *o*- and *p*- (Michaelis) 1032.
Phenylphosphinic acid anilide (Michaelis) 1033.
Phenylphosphinic anilide toluide (Michaelis) 1033.
Phenylphosphinic piperidide anilide (Michaelis) 1033.
1 - Phenyl - 3 - phthalaminomethyl - 5 - pyrazolone (Bradshaw) 2517.
1 - Phenyl - 3 - phthaliminomethyl - 5 - pyrazolone (Bradshaw) 2517.
1 - Phenyl - 3 - phthaliminomethyl - 5 - pyrazolone - 4 - carboxylic acid, Et ester (Bradshaw) 2518.
1 - Phenyl - 2 - piperonyl - 3 - acetyl - 4,5 - diketopyrrolidine (Thiele) P 2794.
γ-Phenylpropenylhydantoic acid (Johnson) 2654.
4-[γ-Phenylpropenyl]hydantoin (Johnson) 2655.
γ-Phenylpropenylthiohydantoic acid (Johnson) 2655.
Phenylpropionaldehyde, *p*-nitrophenylhydrazone (Rona) 58.
β-Phenylpropyl alcohol, derivs. (Cohen) 2887.
β-Phenylpropylamine and phenylurea (Cohen) 2887.
***l*-β-Phenylpropyldiethylamine** and derivs. (Cohen) 2887.
Phenylpyruvic acid, tautomerism (Bougault) 1039; derivs. (Bougault) 2058.
2-Phenylquinoline-4-carboxylic acid, derivs. of (E. Schering) P 127, 1097 (Kalle) P 3330; Fe'' salt (Weinland) 2360.
2 - Phenylquinoline - 4,6 - dicarboxylic acid, ethyl ester (Davis) P 1669.
Phenylseleninic acid and derivs. (Wellcome) P 1975.
Phenylselenonic acid and derivs. (Wellcome) P 1975.
Phenyl styryl ketone, action of PhMgBr on derivs. of (MacClean) 199; -HCl (Marshall) 2224.
Phenylsulfotetrazoline, constitution (Oliveri-Mandala) 71.
Phenyltellurinic acid and HNO_3 deriv. (Lederer) 3235.
Phenyltellurol (Lederer) 3235.
5-Phenylthiazole and salts (Bachstez) 629.
2 - Phenylthiocarbamidomethylhydrindene (Kenner) 462.
2 - Phenyl - 2 - thiohydantoino - 1 - acetic acid, Et ester (Bailey) 1332.
1 - Phenyl - 2 - thio - 3 - methylhydantoin (Komatsu) 2087.
Phenyl - *p* - tolylacetic acid, racemization of, and derivs. of (McKenzie) 1513.
Phenyl - *p* - tolylacetophenone (McKenzie) 2513.
1 - Phenyl - 3 - *p* - tolyl - 4 - acetyl - 5 - methylpyrrole (Almstrom) 2875.
1 - Phenyl - 3 - *p* - tolyl - 4 - benzoyl - 5 - methylpyrrole (Almstrom) 2875.
Phenyl-*p*-tolylmethylamine, derivs. (Cohen) 2887.
1 - Phenyl - 3 - *p* - tolyl - 5 - methylpyrrole (Almstrom) 2875.
1 - Phenyl - 1,2,4 - triazolone (Oddo) 2524.
Phenyltrimethylammonium tribromide (Hantzsch) 3235.
Phenyltrimethylpyrrolidone and derivs. (Gabriel) 314.
Phenylurethan of oxidation products of carvene (Blumann) 86; retention in phlorhizin diabetes (Nitsche) 1076; of phenol (Claisen) P 1225.
Phlal for serum (Feignoux) P 1410.
Philodendron, *Phil. melanochrysum* and *Phil. oxycardium* (Politis) 1347.
Philothion, in cryst. lens (Rey-Pailhade) 936.
Phlobaphenes (Sommerhoff) 979.
Phloracetophenone (Leuchs) 1061.
Phloracetophenone-3,ω-dicarboxylic acid, derivs. (Leuchs) 1060.
Phlorhizin and sugar metabolism (Galambos) 820; Ca salts and, diabetes (Jacoby) 1801; narcotic drugs in, diabetes (Sansum) 1937; sugar during ether and N_2O narcosis in phlorhizinized dogs (Sansum) 3277; human, glucosuria (Benedict) 3278; influence of feeding on acidosis in phlorhizinized dog (Benedict) 3278; levulose, glycocoll and alanine in, glucosuria (Lusk) 3279; see also *Diabetes*.
Phloroglucinolglucuronic acid (Sera) 465.
"Phobrol" (Messerschmidt) 1343.
Pholerite, from Quenast (Ledoux) 3194.
Phonographs, diaphragm for (Owen) P 130; record (Edison) P 237, 2432, 2433 (Aylsworth) P 2432, 2799.
Phonolite, fertilizing value (Wagner) 501; polzenite-trachydolerite- (Scheumann) 582.
Phonopyrrolecarboxylic acids and oxime, etc. (Piloty) 57.
Phorone tetrachloride (Heilthaler) 56.
Phosgenite, translation in (Mügge) 281.
Phosphatases of malt (Adler) 2907.
Phosphates, deposits near Georgetown, Idaho (Richards) 44; deposits of S. Car. (Rogers) 45; deposits of northern Utah (Peterson) 45; alc. in manuf. of (Fox) 128; Egyptian, ind. 232; availability of, in basic slag (Jones) 232; pptn. of earth, on heating urine (Reale) 468; deposits in U. S. (Jones) 580; deposits in Egypt (Ball) 581; deposits of Safaga

Digitized by Google

(Ball) 581; freeing, from clay, Fe, etc. (Hoover) P 686; manuf. of acid (Waggaman) 836; rock in 1913 (Phalen) 837; available, by furnace treatment (Payne) 948; rocks as furnace flux (Barr) 1023; rock (Waggaman) 1086 (Watkins) 2497; removing foreign matter from, rock (Hoover) P 1087; increasing H_3PO_4 content of, rock (Lay) P 1087; Elliston, field, Mont. (Stone) 1291; assimilable (Ciselet) P 1364; washing rock (Davison) 1819; sterilization of, sera (Guyot) 1927; (Ciselet) P 1964; detg. H_3PO_4 in (Stutzer) 2121; in Mass. (Brooks) 2560; reactions between dil. acid solvents and soil (Prescott) 2961; factors which influence fertilizing effect of slightly sol. (Söderbaum) 3319; see also *Fertilizers, phosphorus.*

Phosphate slag. See *Slags.*

Phosphatides, acetone-sol. (Maclean) 636; mol. wt. of, from protagon (Pearson) 809; As compds. of (Hoffmann-La Roche & Co.) P 2568; of milk (Osborne) 2768.

Phosphaturia (Dünner) 3279.

Phosphine, detg. (Reckleben) 2204, 2746.

Phosphinic acids, esters of primary aliphatic *N*- (Michaelis) 1031; secondary (Michaelis) 1334.

Phospholipins, estg. groups in (Foster) 1341.

Phosphomolybdate, pptg. (Mains) 768.

Phospho-nuclease, as related to P and Ca metabolism (Bergeim) 3276.

Phosphorates (Willstätter) 309.

Phosphor-copper (Schulte) P 1745.

Phosphorescence, cathodic, of scheelite (Rohden) 43, 2482; of fluorspar (Formhals) 551 (Formhals) (Ballo) 1002; photoelec. photometry in (Pospielow) 884; phosphorescent surfaces (Lingenhöl) P 1230; in alk. earth selenides (Kittlemann) 2185; theory of (Baly) 3163.

Phosphoric acid, fertilising action of, of steamed bone meal (Alexander) 116; alc. in manuf. of (Fox) 128; systems: H_2O–H_3PO_4–K and NH_3–H_3PO_4–H_2O (Parker) 168; production and fertilizer value of citric-sol. (Waggaman) 232; decomp. of org., esters (Euler) 465; solubility of, in basic steel slag (Jung) 501; esters with glucosides (Fischer) 801; 2nd dissociation const. of (Michaelis) 812; formation in muscles (Embden) (Cohn) (Laquer) 928; biol. absorption of, in soils (Dushechkin) 1085; Ca salt of sucrose, ester (Euler-Chelpin) P 1095; biochem importance of org., compds. (Sjollema) 1185; mobilization of, of soils (Severin) 1216; solubility and assimilability for plants of superphosphate (Kossovich) 1218; org., of rice (Thompson) 1354; derivs. of monoaryl (Bayer & Co.) P 1371; org., of wheat (Clarke) 1516 (Anderson) 1622; purifying (Melamid) P 1538; utilization by animal (Fingerling) 1800; in soils of Peru (Hutin) 1816; in malt (Schönfeld) 1822; compds. of cinchona alkaloids, metals and (Watkins) 1971; (Schmitz) (Burroughs) P 1978; Ueber Phosphorsäureester des Methylglucosids und Theophyllinglucosids (Fischer, book) 1919; and detn. of "available" Cl in "chloride of lime" (Kedesdy) 2044; compds. of citrate-sol. (Mathesius) P 2282; in fermentation (Equeter) 2561; high grade, from crude (Washburn) P 2698; as mono- and di-basic acid (Kolthoff) 2731; behavior with $Ca(OH)_2$ (Kolthoff) 2743; fixation by soil (Pratolongo) 3317; availability in basic slag (Williams) 3319.

Phosphoric acid, analysis. See *Phosphorus, analysis.*

Phosphorites (Willstätter) 309; of Leuca (Galdieri) 580; solubility and assimilability for plants of (Kossovich) 1218; Subhercynian (Heberle) 1291; fertilizers from Russian (Snodgrass) 3113.

Phosphorus, elec. cond. of air in contact with (Schenck) 172; distribution in striated muscles (Rabbeno) 220; and unsatd. compds. (Willstätter) 308; plant colloids—displacement of, content (Samec) 468; transformation of yellow into red (Küspert) 542; effect on phys. properties of Cu (Karr) 589; biochem. significance of (Kincaid) 635; diet and hepatic lesions of (Opie) 646; diffusible, of milk (Wardlaw) 670 (Lindet) 2113 (Bosworth) 2416; org., of musts and wines (Finzi) 688, 1088; in musculature of marine animals (Costantino) 818; org., in smooth muscle (Costantino) 927; at. wt. of (Guye) 984; v. p. lines of system (Smits) 986, 987, 2731; from Al phosphate or phosphate rock (Peacock) P 1010; smelting Fe ore contg. (Greene) P 1011; extg. V from ores high in (Vogt) P 1027; supply of farm feeds and animal requirements (Hart) 1073; dephosphorising steel (Deutsch-Luxemburgische, etc.) P 1298; constitution of (LeBas) 1436; in butter-fat (Osborne) 1920; estg. lipoid and acid-sol., in serum (Greenwald) 1925; in wounds (Henri) 1940; and enzymic processes (Santesson) 2097; in white and red striated muscle (Quagliariello) 2258; Fe, C and (Stead) 2370; cast Fe contg. (Carnevali) 2375; dephosphorizing pig Fe (Pasquier) P 2375; readily extractable, and adequacy of P nutrition (Jakouchkine) 2418; prep. of 100% red (Wolf) 2847; and formation of chlorophyll (Mameli) 2925; physiology of, in thyroidectomized animals (Yuschenko) 2933; influence of, on mechan. properties of gray cast Fe (Wüst) 3209; replacement of N by, in piperidine (Grüttner) 3247; see also *Phosphorus poisoning.*

Phosphorus, analysis, in scheelite concentrates (Hagmaier) 39; P_2O_5 in soil (Brasser) 114 (Berger) 115; white, in matches (Phelps) 184; detg. citric acid sol. H_3PO_4 in basic slag (Haussding) 347; H_3PO_4 in superphosphate (Peters) 347; in rat pastes (E'We) 513; in Ce and Ce alloys (Arnold) 572; in bone (Wörner) 772; grav. estn. (Raper) 813; estn.

Digitized by Google

of inorg. P_2O_5 in tissues and food products (Chapin) 920; NH_4 citrate in (Quartaroli) 945; in steel, Fe and slag 1019; in glycerophosphates (François) 1019; in plants (Rollov) 1069; in water (Winkler) 1517; estg. yellow (Englehardt) 1533; pptn. in presence of H_2SO_4 (Falk) 1725; detn. of P_2O_5 in limestones (Hinden) 1730; (Newton) 2041; calcg. P_2O_5 in Neumann's method (Jodidi) 2044, 2856; inorg., in tissues and body fluids (Costantino) 2100; detn. of citric acid-sol. P_2O_5 in Thomas meals (Dubbers) 2121; P_2O_5 in vegetable material (Stutzer) 2121; sepn. from V (Rodeja) 2202; in biol. material (Taylor) 2258; in soil exts. (Millar) 2280; nephelometric detn. of P_2O_5 (Serger) 2745; P_2O_5 in Ca phosphate (Kolthoff) 2746; (Kober) 2855; recovery of NH_4 molybdate used in phosphate estns. (Prescott) 3041; P_2O_5 (Riegler) 3043; in org. compds. (Mandel) 3043; by means of nascent H (Ericsson) 3189; in basic slag (Patten) 3318.

Phosphorus alloys, phosphor-Sn (Vickers) 587; adding, with Sn to molten Al (Naylor) P 1170.

Phosphorus chlorides, PCl_3 (Peacock) P 361, 2433; chlorination with PCl_5 (Miller) 1558; d. and degree of dissociation of satd. vapor of PCl_5 (Smith) 2614.

Phosphorus compounds, therapeutic value of (Marshall) 936; org., with N (Michaelis) 1031; changes in, of muscles (Costantino) 1073; biochem. importance of org. H_3PO_4 compds. (Sjollema) 1185; fatty (Hoffmann) P 1372; constitution of (LeBas) 1436; of wheat-bran (Robinson) 1919 (Anderson) 2098; lipoid compds. contg. P (Hoffmann-La Roche & Co.) P 2292; absorption spectra of (Crymble) 3164; biochemically important org. (Sjollema) 3256.

Phosphorus halides, reduction of,—action of Hg on (Wolf) 2847.

Phosphorus metabolism. See *Metabolism, phosphorus.*

Phosphorus nitride (Peacock) P 1099.

Phosphorus oxides (Peacock) P 1099; P_2O_5 in maize flour (Crae) 1192; P_2O_5 in metal filament lamp (Gen. Elec. Co.) P 1721; action of P_2O_5 on hydroxystearic and ricinoleic glycerides (Fokin) 1898.

Phosphorus poisoning and peroxidase reaction of rabbit liver (Bunting) 2108; exams. into (Hulst) 2770; behavior of chondriosomes of kidney cells in fatty degeneration after (Azzi) 2945; liver and kidney function in exptl. (Marshall) 2946.

Phosphorus sulfides, pure P_4S_3 (Frary) P 2800.

Phosphotungstic acid, ppt. from rice polishings (Drummond) 817.

Photobromination. See *Bromination.*

Photocatalysis. See *Catalysis.*

Photochemistry of green plants (Sernagiotto) 69; of phenylacetaldehyde (Stobbe) 207; natural photosynthesis (Moore) 474; sensitiveness and photo-elec. cond. (Volmer) 549, 1709; at exposition of book dealers and painters at Leipsic (Cobenzyl) 564; properties of colored resinates (Bancels) 1001; chlorophyll photosynthesis (Mameli) 814; effect of O_3 solns. in H, N and He (A. B.) 1141; stilbene and Et phenylitaconate (Stobbe) 1174; evolution of electrolytes (Boll) 1270; photochem. action of molybdic solns. (Casolari) 1326; quartz Hg-vapor lamps for (Bovie) 1340, 2009; elec. methods (Goldmann) 1424; phenomena in solns. of nitroprusside with thiocyanates and thiosulfates (Casolari) 1435; of rarer elements (Benrath) 1723; photosynthesis in org. chemistry (Paternò) 1897; temp. coeff. in (Berthelot) 2184; of HI (Gil) 2338; energy exchange during photochem. processes in gases (Warburg) 2480; Ueber den Energieumsatz bei photochemischen Vorgängen in Gasen—Absorption ultravioletter Strahlung durch Sauerstoff (Warburg, book) 2836; laws of photochem. reactions for discontinuous illumination (Lazarev) 3022; photochem. reactions in mixts. of O_2 and H (Weigert) 3013, disturbances of photochem. gas reactions (Weigert) 3014; photochem. reactions and photoelec. effect (Landsberg) 3023; temp. coeff. of Cl (Nazarov) 3023; photochem. reductions (Neuberg) 3058; photochem. formation of indigo from indican (Neuberg) 3076; in asphalt (Gödrich) 3127; energy law of (Warburg) 3149; see also *Photography; Light.*

Photodynamic injury, peptolytic enzymes in urine of rabbits after (Pfeiffer) 1506.

Photoelectric cells. See *Cells, voltaic.*

Photoelectric constant and at. heat (Sutton) 1873.

Photoelectric effect with ultramicroscopic metallic particles (Meyer) 884; Pd charged with H and (Stumpf) 1145; (Richardson) 1576; photochem. reactions and (Landsberg) 3023; of metals under glow discharge (Wertheimer) 3166; see also *Electricity; Electrons; Light; Rays.*

Photoelectricity, measurements with oxidized Cu electrodes—basis for photoelec. theory of Becquerel effect (Goldmann) 14, 15; Die Lichtelektrischen Erscheinungen (Pohl, Pringsheim, book) 19; Se phenomena (Del Regno) 1000 (Brown) 1424; (Fleming) 1873; gases and behavior of Zn (Küstner) 2031; phenomenon exhibited by liquid dielectrics (Stramp) 2621; Die Lichtelektrizität (Hallwachs, book) 2836; relation between photoelec. retardation and gas pressure for ultramicroscopic metal particles (Meyer) 3020; of K (Wiedmann) 3166; new phenomena of (Goldstein) 3170; galvanic cell which reverses its polarity when illuminated (Swinton) 3173.

Photogenesis in *Lampyridae* (McDermott) 938; photogenic substance in firefly (Harvey) 938.

Digitized by Google

Photographic analysis of flame (Dixon) 379.
Photographic developers, theory of org. (Homolka) 30, 762; preventing pressure marks (Lüppo-Cramer) 272; aldehyde- and acetone-bisulfites (Pellizzari) 272; 4-hydroxyphenylalkylglycines (An.-Fab.) P 274 (Valenta) 1722; (Anilin-Fab.) P 1283; giving tinted images (Valenta) 1722; (Union Photo., etc.) P 2039; (Sandoz) P 2356; (Farbw.) P 2842; reducing power of (Frary) 3035; reaction between alkalies and metol and hydroquinone in (Frary) 3036; (Thatcher) P 3180.
Photographic development, delay of ripening by acids (Lüppo-Cramer) 31; intensifier for autochromes 272; nucleus formation—development in tints (Lüppo-Cramer) 272; and fixing plates in one operation (Valenta) 272; etching on fog nuclei—pulverization reaction (Lüppo-Cramer) 273; with AgI (Lüppo-Cramer) 273; intensifier (Namias) 273; progression and regression in Ag halide films (Volmer) 415; reduction with persulfates (Stenger) 762; AgBr reduction (Lüppo-Cramer) 762; app. (Doyle) P 764; Na_2HPO_4 in (Lüppo-Cramer) 1722; acids in (Lüppo-Cramer) 1722; masking accelerating effect of formation of nuclei (Lüppo-Cramer) 2038; thioindoxyl (Crowther) 2355; automatic (Gamble) 2355; (Bettmann) P 2356; retarding action of sugar (Maldiney) 2626; see also *Toning; Fixation.*
Photographic films, transparent (Reid) P 120; manuf. (Halen) 274; cement for joining portions of moving picture (Tessler) P 516; kinematograph (Norman) P 763; acetylcellulose for (Lindsay) P 1282; cleaning cinematograph (Pierson) P 1282, 2801; tracks of α-particles in (Kinoshita) 1430; for color photography and cinematography (Bradshaw) P 1723; restoring (Hochstetter) P 1723, 2698; colored (Frachebourg) P 2001; of celluloid (Borzykowski) P 2168; (Brewster) P 2355; fog in glass-clear (Lüppo-Cramer) 2038; rendering rain streaks invisible (Zentrale, etc.) P 2356; (Brandenberger) P 3037.
Photographic paper, sensitiveness of chromated pigment (Eder) P 31; (Willis) P 180; radiography (Vaillant) 272; sensitometry of (Nutting) 762; sensitization (Rubricus) P 763; light-printing (Dürener Fab., etc.) P 1283; for blue print (Valenta) 1722; green toning on AgBr (Namias) 2039; for color photography (Thornton) P 3180.
Photographic plates, color rendering of gelatin (Stenger) 31, 180, 564, 2627; autochrome (Wall) 180; photomechanical prepn. of printing (Cornwall) P 564; photography with ortho- and panchromatic plates (Frank) 763; color sensitized (Jones) 1013; multicolor (Hatt) P 1282; polychromatic screen, of glass (Mohr) P 2974; see also *Photographic films; Photography; Photography, color; Reducing agents.*
Photography, adsorption protective envelopes (Lüppo-Cramer) 30; theory of persulfate reduction (Lüppo-Cramer) 30; reclaiming faded pictures (Namias) 30; light sources (Luckiesh) 31 (Voege) (Luckiesh) 763 1583 (Lux) 2351; sensitiveness of dichromated glue (Valenta) 31; and testing of materials (Dalby) 49; recent advances (Leffmann) 179; action of AgN_3 (Bekk) 416; spectral photometry of X-rays (Friedrich) 555; physics of (Mees) 763; with ortho- and panchromatic plates (Frank) 763; energy of (Warburg) 883; and colloidal chemistry (Lüppo-Cramer) 1013, 3178, 3179, 3180; La fotografia a luce lampo (Namias, book) 1014; (Lehmann) 1281; X-ray photographs of the diamond (Keller) 1715; Am. Annual of, 1915 (book) 1722; I processi fotografici (Pizzignelli, book) 1723; automatic exposure and development (Gamble) 2355; latent image (Crowther) 2355 (Lorenz) 2490; stereoscopic, by X-rays (Alexander) 2485; action of α-, β- and γ-rays (Sahni) 2623; Chemistry for Photographers (Townsend, book) 2841; intensification methods 3036; production of duplicate negatives, methods of image reversal, lateral inversion and stripping (Stenger) 3036; theories of latent image and reversal (Wightman) 3036; photographic effect of recoil atoms (Wood) 3169; Geiger app. for photographic registration of α and β particles (Shrader) 3170; illuminants for (Mees) (Jones) 3180. *Patents:* Prints (Willis) 180, 2843; imbibition printing process (Ives) 274; (Printex Co.) (Klimsch & Co.) (Böhm) (Bangé) 764; copying on printing rolls (Maschinenfab.) 764; dichromated colloid process (Sury) 764; Röntgen (Bauermeister) 1282; emulsion (Christensen) 1282; transferring positives (Gurich) 1282; stereoscopic effect in pictures (Friedmann) 1283, 2356; half-tones (Klimsch & Co.) 1283; printing surfaces (Rotophot A.-G., etc.) 1283; copying positives or negatives (Schwarz) 1283; etched printing plates (Ormay) 2355; autotype screen pictures (Eberhard) 2356; sepia- and red-tones (Farbw.) 2356; reproduction of drawings (Millergraph Co.) 2356; Se toning baths (E. Schering) 2356, 2842; see also *Intensifier; Reduction; Screens.*
Photography, color (Rypinski) 180; polychromide process 273; Teoria e pratica della coloritura della fotografie ed ingrandimenti ritratto e paesaggio (Namias, book) 1014; 2-color process (Brown) 1434; Three-Color (Hübl, book) 2841. *Patents:* (Hess-Ives Co.) 274; (Ives) 274, 416, 2355; (Ungerer) 274; colored prints (Lewisohn) 565; (Norman) 763; films for (Bradshaw) 1723 (Brewster) 2355; (Brewster) 2039; cinematographic pictures (Campbell) 2039 (Riper) 2356; screens and screen plates for half-tone processes or (Rheinberg) 2841; (Ungerer) 2842; (Christensen) 3037; colored designs (Frachebourg) 3037; paper for (Thornton) 3180.

making prints in natural colors (Ungerer) 1014; see also *Screens*.

Photolysis of KIO_3 (Mathews) 407; by chlorophyll (Chodat) 2099; of powder (Guilband) 2982.

Photomechanics, at exposition of book dealers and painters at Leipsic (Cobenzyl) 564; of prepg. printing plates (Cornwall) P 564.

Photometer, measurements with moving lamp (Trowbridge) 166; (Pfund) 258; illumination (Redding) 398; Lummer Pringsheim spectral flicker (Bender) 1003; flicker, attachment for Lummer-Brodhun contrast (Kingsbury) 2611; phys. (Coblentz) 3162.

Photometry, light filters for (Mees) 398; W lamps and (Middlekauff) 549; spectral, of X-rays (Friedrich) 555; of gas-filled lamps (Tuck) 752; phys. (Ives) 873; photoelec., in phosphorescence (Pospielow) 884; units (Nutting) 1004; of monochromatic green soln. (Ives) 1424; construction of Se cells for (Ancel) 1427; of vari-colored light (Pirani) 2031, 2349; photographic (Weber) 2349; see also *Light; Lighting*.

Photomicrography (Hurst) 1294; and differentiation between yeasts (Lindner) 1657; (book) 1723.

Photosynthesis. See *Photochemistry*.

Phototropy (Senier) 202, 3228; heats of combustion of phototropic substances (Padoa) 1144; velocity of reaction in, transformations —temp. coeffs. in, transformations (Padoa) 1144; of inorg. systems (Mourelo) 1145, 3037; and constitution (Padoa) 1318; in solns. (Foresti) 1474; (Senier) 1906; velocity of phototropic changes and their temp. coeffs. (Padoa) 3066.

Phthalic acid, quinidine *dl*-hydrogen phthalate (Kenyon) 63; 1-naphthylhexylcarbinyl ester, etc. (Kenyon) 293; tetrahydro-2-naphthyl ester (Kenyon) 293; Mg *l*-menthyl phthalate (Kenyon) 1035; sepn. of linalol strychnine phthalates (Paolini) 1323–4; acid K phthalate and acid Na phthalate as standards in acidimetry and alkalimetry (Hendrixson) 2853; Et H phthalate (v. Amann) 2881; sapon. of Et ester of, by alkalies (Wegscheider) 3007; kinetics of reaction of EtOH–HCl with (Wegscheider) 3008.

Phthalic anhydride, condensation of γ-ketonic acids with (Borsche) 302; condensation of thiophene with (Steinkopf) 459; condensation products from, and carbazoles (Badische) P 966.

1 - Phthalidene - 3 - *p* - methoxystyrylcrotonolactone (Borsche) 303.

1 - Phthalidene - 3 - methylcrotonolactone (Borsche) 303.

1 - Phthalidene - 3 - phenylcrotonolactone and isomer (Borsche) 302.

α - Phthalidenephenylisocrotonic acid (Borsche) 2255.

Phthalidenestyrylmethane and derivs. (Borsche) 2255.

1 - Phthalidene - 3 - *p* - tolylcrotonolactone and NaOEt compds (Borsche) 302.

Phthalides, absorption spectra (Pratt) 295, 882; of benzene, etc., series (Copisarow) 2519.

α - Phthalidyl - γ - phenylbutyric acid and Et ester (Borsche) 2255.

Phthalimidoacetoacetic acid, supposed ester (Gabriel) 313.

β-Phthalimidobromobutene (Freytag) 1916.

β-Phthalimidobutene and dibromide (Freytag) 1916.

α-Phthalimido-α-ethylbutyric acid and derivs. (Freytag) 1915.

α - Phthalimido - α - ethylbutyrophenone (Freytag) 1915.

α - Phthalimido - α - methylbutyric acid and derivs. (Freytag) 1915–16.

α - Phthalimido - α - methylbutyrophenone (Freytag) 1916.

δ-Phthalimido-α-methylvaleric acid and Ca salt (Lipp) 1760.

γ-Phthalimidopentene (Freytag) 1916.

α-Phthaliminoacetoacetic acid, Et ester and derivs. (Scheiber) 916.

Phthaliminoacetylacetone and pyrazole (Scheiber) 916.

Phthaliminoacetylphenylhydrazide (Bradshaw) 2518.

Phthaliminobenzoylacetone and pyrazole (Scheiber) 916.

2-Phthaliminomethylhydrindene (Kenner) 462.

Phthalocarbazoles (Badische) P 865.

Phthaloperinonesulfonic acids (Bayer & Co.) P 865.

2,3-Phthaloylbenzophenones, new colored reduction products of (Schaarschmidt) 2256.

Phthalyl chloride, compd. with hexamethylenetetramine (Vanino) 1049.

Phthalylglycylacetic acid (Gabriel) 313.

Phthalylglycyl chloride and sodiomalonic ester (Gabriel) 313.

Phthalyl-2-pyridylhydrazide (Fargher) 2890.

Phthalyl - 2 - quinolylhydrazide (Fargher) 2891.

Phthisis, miners' (Moir) 3290.

Physical chemistry. See *Chemistry, physical*.

Physical conditions, control of, in electrolytes (Rojas) 24.

Physical constants, See *Constants*.

Physical constitution of caoutchouc solns. (Caspari) 170.

Physical properties of soils (Kopecky) 115; temp. and, of H_2O (Cederburg) 548; of metals as functions of each other (Stuart) 3203; of dental amalgams (Atkinson) 3300.

Physical quantities, relation between, *c*, *β*, *δ* and *E* for solid elements (Kleiber) 2024; entropy in solid substances and its relation to other (Pagliani) 3016.

Physico-chemical constants. See *Constants*.

Physico-chemical properties, contractive and

Digitized by Google

expansive energies of vol. and surface and, of substances (Veimarn) 2832.

Physics, A. E. F. units and notation (Strecker) 16; Handbook of, and Chemistry (Corbin, Stewart, book) 18; Mol. (Crowther, book) 18; national phys. lab. rept. 22; Chemistry and (Chem. Rubber Co., book) 1713; nomenclature and symbols 2999; work of Physikalisch-Technische Reichsanstalt in 1913 1141, 3148; Handbook on, and Chemistry of Mining and Mine Ventilation (Walsh, book) 3213.

Physikalisch-Technische Reichsanstalt, work in 1913, 1141, 3148.

Physiological action of protein derivs. (Underhill) 3252; Chem. constitution and (Spiegel, book) 3302.

Physiological chemistry. See *Chemistry, biological.*

Physiological saline solution. See *Sodium chloride.*

Physiology, Kirkes' Handbook of (Greene, book) 469; First Book of, and Hygiene (Cathcart, book) 919; Practical Course in Chem. (Cramer, book) 1068; of high altitudes (Hasselbalch) 1193; Human (Luciani, book) 1792.

Physostigmine (Straus) 57; and derivs. (Polonovski) 3221; action of SO_2 on (Polonovski) 3222; physiol. action of (Langley) 3301.

Physostigmol and Me ether, etc. (Straus) 57.

Phytase, hydrolysis of phytin by (Anderson) 1622.

Phytin, chemistry of (Anderson) 625; (Egorov) 1189; hydrolysis of (Anderson) 1622, 2098; in wheat bran (Anderson) 1622.

Phytochemistry, reductions by (Neuberg) 58.

Phytolacca abyssinica (Kueny) 121.

Phytosterol, Bömer, test (Olig) 248; detn. in vegetable fats (Klostermann) 249; new (Oestling) 351; detection in animal fats (Kühn) 1079, 2270 (Fritzsche) 1946; in *Brauneria angustifolia*, and acetates (Heyl) 2249.

Phytosterolin in *Brauneria angustifolia*, and acetate (Heyl) 2249.

Picoapimaric acid, Ag salt of *l*- (Binder) 2082.

Picea vulgaris, resin of (Binder) 2081.

Pickles, prepn. (Neil, book) 338; cantaloups (Edwards) P 3310.

Pickling, metals (Herrmann) 27; and corrosion of Fe (Richardson) 286; storage battery plates (Engel) P 414; gray Fe castings (Hobbs) 589; recovering H_2SO_4 from pickle liquor (Howl) P 2297; Fe and steel (Hoffman) P 2376.

Picoline, compds. with Na (Emmert) 85.

Picolinium hexabromoösmiate, *α*- and *β*- (Gutbier) 1440.

Picolinium hexabromoselenate (Gutbier) 1436.

***β*-Picolinium hexachloroiridate** (Gutbier) 1439.

***α*-Picolinium hexachloroösmiate** (Gutbier) 1440.

***β*-Picolinium hexachloroplumbate** (Gutbier), 1014.

***β*-Picolinium hexachlororuthenate** (Gutbier) 2196.

***β*-Picolinium pentachlororuthenate** (Gutbier) 2196.

Picric acid, explosion (Anon.) 716 (Cooper-Key) 965; addn. products of (Reddelien) 1910; manuf. and liability to explode (Osborne) 1995; prep. of picrates from alkylpyridinium, etc., bases (von Walther) 2065; bisanisylidenedimethylpyrone salt (Boos) 2893; icterus from absorption of (Wahl) 2944; acidimetric detn. (Misovici) 3043; sp. reaction of (Rodillon) 3268; strength of, as an antiseptic (Tidy) 3328; synthetic (Ney) 3362.

Picrolonic acid, tetramethylenediguanidine salt (Kizel) 2897.

Picrotoxin, convulsions (Pollock) 3287.

Picrylmercaptomethylmercaptobenzene (Wienerberger) 910.

Picrylmethylamine, coloration of derivs. by alkalies (Franchimont) 1768.

Pictures, reclaiming faded (Namias) 30; transferring from high to flat printing form (Schupp) P 850; transferring pigment, on rolls (Rolffs) P 2318; see also *Photography.*

Pieronalethenyldioxytriazine and derivs. (Bougault) 1174.

Piezochemistry, influence of pressure on reaction velocity in condensed systems (Cohen) 1421.

Pigments, furnace for making (Holley) P 157; progress in ind. of mineral (Wäser) 247; Painters' Colors, Oils and Varnishes (Hurst, book) 387; (Badische) P 726; from FeS (Bayerische, etc.) P 966; permanence of color (Abney) 967; oil green 969; of Old Masters (Laurie, book) 972; printing colors (Turkin) P 973; (Meurant) P 974; (Davies) P 1126; chrome yellow and greens (Given) 1398; theory of,—fundamental characteristics of, and size of granules (Ostwald) 1551; use in manuf. of paper (Sindall) 1691; test for fineness of (Holley) 1695; from cinnabar or ores contg. HgS (Elbner) P 1696; transferring prints to metal surfaces (Neigen) P 1696; inalterable white (Liopart) P 1696, 3136; white for enamel (Rickmann) P 2444; imitation chrome yellow 2458; of $CaSO_4$ and ZnS (Carpenter) P 2549; analysis of white 2714; produced from thymol by NH_4OH (Gies) 3085; contg. Ti oxide (Barton) P 3369; finely divided Pb for making (Holley) P 3369; app. for cleaning used (Schön) P 3370; see also *Coloring matter; Color(s); Dyes; Ultramarine.*

Pigments, animal, physiol. renal (Schreyer) 101; black, in skin (Young) 649; granules of hepatic cells (Mayer) 2550; abnormal yellow, in urine (Justin-Mueller) 2777; chromolipoids and pigment complexes (Ciaccio) 2906;

Digitized by Google

chemistry of coat color in animals (Onslow) 3069; see also *Bile pigments; Blood pigments.*
Pigments, plant, of *Bacillus pyocyaneus* (Nogier) 1343; lycopersicin of tomato (Duggar) 1346; of chromoleucites (Lubimenko) 1929; chemistry of (West) (Horowitz) 1930; in flowers of Indian plants (Perkin) 2924; biochem. study of bacterial (Kligler) 3083.
Pills, of pharmaceutical manuf. (François) 2290; salol-coating of (Peacock) 2969.
Pimelic acid, hydrazide and azide and derivs. (Curtius) 1605, 1606.
Pimpinella, radix pimpinellae-pimpinellin (Tunmann) 121
Pinacol, PhC : CCPh(OH)C(OH)Me$_2$ (Favorskii) 1471.
Pinacolin, hydrazone of, and formation of Me$_2$CEt from (Kizhner) 3051.
Pinacones, synthesis of (Parry) 1037; (Soc "Rogatir") P 2797.
Pine, turpentine and oil of turpentine from Aleppo (Tsakalotos) 1094; oleoresin of sand (Schorger) 1389; carbohydrates of, wood (Hägglund) 2925.
Pineapples, preserving (Ginaca) P 338.
Pinene, phosphorate (Willstätter) 309; ozonide (Harries) 2877.
Pine needle oil (Schimmel & Co.) 2692.
Pine oils (Schorger) 373.
Pinitol and derivs. (Griffin) 2090.
Pins, alloy for (Metzger) P 2637.
Pintadoite (Hess) 426.
Piperazine - 2,3 - diphenyl - 2,3 - dicarboxylic acid, derivs. (Shlezinger) 2068.
Piperidine, Mg derivs of (Chelintzev) 2072; γ-substituted (Koenigs) 2254; analogs of, with N replaced by P, etc. (Grüttner) 3247.
Piperidine series, aldehydes of (Harries) 2880.
Piperidinium hexabromo-osmiate (Gutbier) 1440.
Piperidinium hexachloroiridate (Gutbier) 1439.
Piperidinium hexachloro-osmiate (Gutbier) 1440.
Piperidinium hexachlororutheniate (Gutbier) 2196.
Piperidinium pentachlororutheniate (Gutbier) 2196.
1 - [Piperidino - *p* - aldehydobenzyl] - 2 - hydroxy - 3 - naphthoic acid, Me ester (Lugner) 1465.
γ-Piperidone compound (Petrenko-Kritchenko) 3053.
Piperidylaldehyde, derivs. (Harries) 2880.
Piperil, tolylosazones, etc. (Padoa) 1319–20.
Peronal, condensation product of ethylurethan and—elimination through urine (Bianchi) 824; xylylhydrazones, etc. (Padoa) 1318–9; condensation with aromatic amines (Wheeler) 1772; 4,4'-diphenylsemicarbazone (Toschi) 2388.
Piperonalacetothienone, and reduction product, $C_{14}H_{12}O_2S$ (Bargellini) 448.
Piperonaldiurethan (Bianchi) 824.
Piperonalideneanthranilic acid and oxazine (Ekely) 1065.
Piperonalmethylsemicarbazide (Backer) 2384.
α-Piperonylideneacetone, semicarbazone and its hydrochlorides, etc. (Wilson) 604.
Piperonylideneleviulinic acid, α- and δ-, and derivs. (Borsche) 2245.
2 - Piperonylquinoline - 4 - carboxylic acid, esters of (E. Schering) P 126, 1095, 1830, 2130; homologs and substitution products (E. Schering) P 2292.
Piperylene (Harries) 2878.
Pipes, Zn, for water (Rinck) 341; flow of viscous fluids through (Lees) 405; cleaning (McNabb) P 697; specification for salt-glazed ware 700; molded (Lobert) P 704; wasting of, of fuel economizers (Ingham) 780; screw coupling for acid (Fritzweiler) 873; kiln for burning 958; Cast-Fe and Steel (Sharp, book) 1026; removing obstructions in drain or sewage (Anhaltzer) P 1099; protection of gas 1107; C_2H_2 welding of joints (Manlove). 1167; acid-resisting (Strzoda) P 1230; joints in cast Fe (Miller) 1385; Pb wool joints (Reinicker) 1385; rust in galvanized Fe (Meyer) 1599; corrosion of Fe and steel (Dunkley) 2757; external corrosion of cast Fe (Pugh) 2757; shell oil pipe line (Crozier) 3127; testing tube for pipe line (Barth) P 3147; load tests on concrete (Conant) 3345; see also *Iron; Steel; Sewers,* etc.
Pipet, protection for, cocks (Beger) 257; volumetric 419; gas analysis (Wempe) 537; filter-, for ether (Pickel) 873; weighing (Mertes) 873 (Hall) 2611; (Born) 2165; for calibrating buret (Foulk) 2469.
Pipetting (Panopulos) 1409; with suction pump (Pilz) 1861.
Piping, removing, from ingots (Schruff) P 1895; prevention of, in steel ingots (Giolitti) P 2218 (Gathmann) 3208; removing, in cast Fe (Schruff) P 2377.
Pipitzahoic acid (Bayer & Co.) P 1096.
Piqure. See *Puncture.*
Pistacia lentiscus, "inkiusen" in (Hanausek) 1798; oil of (Sernagiotto) 3327.
Pistachio, comp. (Ricciardi) 867; Fe and chlorophyll in maturing of, seeds (Ricciardi) 925.
Piston rod, alloy for packing rings for (Holder) P 781.
Pisum sativum, glycerol in causing anomalous structure of (Laurent) 814.
Pitch, introducing, into grooves (Lyttleton) P 137; analysis (Bernus) 243; sp. gr. detn. (Weiss) 368; granulating (Stevens) P 1245; burning (Stewart) P 1386; treating (Robinson) P 1993; production of, in Russia (Baker) 2587; recovering (Davidson) P 2706; sizing (Keil) 2965; elimination of, from cellulose (Sieber) 3128.
Pitchblende, α-rays of Bi from (Meitner) 1716;

Digitized by Google

of Cornwall, Eng. (Penrose) 2048; analysis of (Becker) 2485.
Pituitary extract, in control of pneumonia (Howell) 224; intramuscular injection of, and secretion of milk (Hill) 478; as coagulant in surgery (Kahn) 825; effect on milk secretion in goat (Hill) 1074; effect upon cerebrospinal secretion (Weed) 1802; and reproduction in domestic fowl (Pearl) 1932; standardization—comparison of physiol. activity of com. (Roth) 2286.
Pituitary gland, disease (Dunn) 333; histidine-like substances in (Aldrich) 929; and growth of carcinomata (Robertson) 932; influence on metabolism (Hewitt) 1072; active material of (Herring) 1075; physiol. activity of *pars intermedia* and *pars nervosa* of ox (Herring) 1075; metabolism in disease of (Means) 1635; compn. and physiol. activity (Fenger) 2397; sepg. constituents (Hoffmann-La Roche) P 2424, 2570; secretion (Cow) 2932; effect on egg production (Clark) 3281; diuresis, pituitary factor (Cow) 3282; effect on isolated human uterus (Lieb) 3284; effect on pulse form (Hewlett) 3301.
Pituitrin and respiration (Nice) 478; action on mammary gland (Simpson) (Schäfer) 2104.
Placenta, action of ext. of, on surviving rabbit uterus (Fuchs) 106.
Plague, diagnosis (Berlin) 1924.
Planck-Einstein formula (Ratnowsky) 2029.
Plankton, development in Lietzen Sea (Kolkwitz) 3269.
Plants, photosynthetic processes in green (Sernagiotto) 69; light reactions of (Hess) 89; water requirements of (Briggs) 95 (Kjankoje) 947; Ueber einfache Pflanzenbasen und ihre Beziehungen zum Aufbau der Eiweisstoffe und Lecithine (Trier, book) 95 effect of salicylic aldehyde on (Skinner) 115; sources of lime and magnesia for (MacIntire) 116; identification of hydrastine and berberine in (Mayrhoffer) 122; elec. culture (Löb) 231; effect of calcareous soils on (Gile) 231; accessory factors in, growth (Bottomley) 330; H_2O requirements and growth in glycocoll solns. (Dachnowski) 331; harmful action of distd. water (True) 331; dyes (Willstätter) 331; colloids—displacement of P content by changes of conditions and diastatic decomp. of starch (Samec) 468; HCN in (Petrie) 475 (Jorissen) 925; smoke injury (Eicke) 475 (Crowther) 683 (Knight) 2103; enzymes (Doby) 476, 1190 (Hall) 2102; microchemistry (Tunmann) 476, 1660, 3326; utilizing marine (Gloess) P 518 (Christiansen) P 1231; relation between Mn and Fe in respect to (Pugliese) 641; heat production in (Molisch) 641 (Pavarino) 1190; action of drugs on (Bose) 642; ashes as source of potash (Russell) 684; oil-producing (Voight) 728 (Raffo) 2604 (Dammer) 2989; carboxylase in (Zaleski) 814; oxidizing enzymes in (Pellegreffi) 815 (Begemann) 1791; and nitrates in soils (Lyon) 833; removal of lime from soil by fumes and effects on (Wieler) 836; function of nutritive materials in (Faak) 837; radioactivity and (Malpeaux) 838; pentoses in, exts. (Davis) 922; assimilation of atm. N by (Kovessi) 925, 3271 (Mameli) 2103, 3270; d. of cell sap in desert (Cannon) 925; hurtful actors on cultivated (Jamieson) 947; CO_2 and, growth (Noyes) 949; protective agents (Schaefer) 949; treatment of diseases of (Bickel) P 950; detg. potash and P in (Rollov) 1069; differentiation and specificity of starches in relation to genera, species, etc. (Reichert) 1071; Inorg., Poisons and Stimulants (Brenchley, book) 1072; Unna methods for establishing oxidizing and reducing regions—use on (Schneider) 1188; potash mother liquors and (Vogel) 1208; effect of high frequency currents on (Hombérger) 1218; solubility and assimilability for, of superphosphate (Kossovich) 1218; action of Bordeaux mixt. on (Barker) 1219; sap studies with horticultural (Chandler) 1345; succession of, associations (Fuller) 1345; action of Al salts on (Kratzmann) 1345; F and (Gautier) 1361; medicinal, in Britain (Holmes) 1368; chemistry (Keegan) 1494, 2922; chem. factor in study of (Smith) 1629; feeding power of (Truog) 1653; poisonous (Anon.) 1659 (Jensen) 2403; concn. of nutrient soln. and rate of growth (Stiles) 1797; autofermentation in (Molliard) 1798; art. absorption of liquids in (Acqua) 1799; utilization by body of, protein (Boruttau) 1800; action of foliage and needle forests on (Koch) 1816; CCl_4 in extn. and estn. of active principles (Gori) 1827; Ueber die chemischen Bestandteile grüner Pflanzen (Curtius, Franzen, book) 1930; Zur physiologischen Wirkung der Aluminiumsalze auf die Pflanze (Kratzmann, book) 1930; N and higher (Molliard) 1930; Effects of Radioactive Ores and Residues on Plant Life (Sutton, book) 1963; osmotic pressure of juices of desert (Harris) 2102; exosmosis from roots of anesthetized (Merrill) 2103; relations to distd. water and dil. toxic solns. (Merrill) 2103; distribution of oxidases in (Reed) 2261; acid secretion of *Cicer arietinum* (Sahasrabuddhe) 2261; org. compds. and, characteristics (Schreiner) 2261; heliotropic reactions (Loeb) 2391; 3-salt nutrient soln. (Shive) 2396; concretions in streams by blue-green algae and related (Roddy) 2753; action of free S on (Bosinelli) 2790; influence of Röntgen emanations on development (Pfeiffer) 2925; relation between influence of light and N on growth (Pfeiffer) 2925; alkaloid formation in,—protein and nicotine content of tobacco, during growth (Rasmussen) 2925; Chimie végétale (André, book) 2926; antagonism between ions in absorption of salts by (Stiles) 2961; of highly alk. soils (Keller) 2962; bacterial test for plant food accessories (Bottomley) 3081;

oxidation and reduction with plant chromogens (Wolff) 3084; assimilation of CO_2 by (Raikow) 3086; inorg. constituents (McIntire) 3261; Mg in albicant and chlorotic (Mameli) 3270; action of org. substances on (Ciamician) 3271; effect of KI, methylene blue and other substances on embryo sacs of seed- (MacDougal) 3271; food requirements of, of Piedmont soils (Williams) 3318; see also *Assimilation; Chlorophyll; Leaves; Metabolism, plant; Respiration.*

Plasma, condition of, and susceptibility of irritation (Heilbronn) 2924; see also *Blood plasma.*

Plasmapheresis (Abel) 2665; (Turner) 2777.

Plasmon, powder and milk powder (Puckner) 2129.

Plaster, water in (Canals) 1368. *Patents:* Finish for (Ramsey) 854; retarder for (Strauss) 1382; mixing cement-sand (Weber) 1680; hydrated lime (Spackman) 2302; (Brothers) 2808; gypsum (Dytyee) 2808; waterproofing (Heide) 2808.

Plaster of Paris. See *Calcium sulfate.*

Plasticity, translation-hypothesis and, of metal crystals (Szochralski) 779; problem in lime manuf. (Latham) 854; of clay and mode of origin (Davis) 1020; Atterberg, method (Kinnison) 2300; sp. heat and, of metals (Skaupy) 3161.

Plastic material. See *Composition, plastic; Rubber, artificial, and substitutes.*

Plate glass. See *Glass.*

Platens, typewriter (Wright) P 163.

Plates, filter press 1679. *Patents:* Colored, for architectural ornaments (Borner) 136; of asbestos and cement (Turner) 136; metal, for safes, etc. (Bauer) 1170; coating, with Au (Max) 1297; from paper pulp (Waterman) 1691; flexible (Thode) 1832; matrix for intaglio or relief (Aylsworth) 2296; colored ceramic (Utzschneider & Jaunez) 2579 (Davis) 2806; refractory (Crefelder Modellfab., etc.) 2579; from viscose (Ver. Glanzstoff-Fab. A.-G.) 2590; insulating, covering and finishing (Forbeser, etc.) 2800; of rectifying column (Soc. Barbet) 3147; etching, washing and drying (Rau) 3218; etching (Prigge) 3337; see also *Electrode.*

Plating, Fe with Cu, brass, etc. (Monnot) P 49; Fe with Pb or Al (W.) 1894; see also *Electroplating.*

Platinotype, printing (Willis) P 565.

Platinum, Röntgen spectrum of (Seemann) 175 (Wagner) 1715; detg. Au in by-products contg. (Jolly) 186; vapor pressure (Langmuir) 263; emissivity of (Foote) 404, 2348; plating (Nicolaus) 890, 2037 (Kateridge) 2738; detg. convection consts. of, wires (King) 1004; production of, and allied metals (Day) 1024; -tipped Ni contact points (Eldred) P 1027; detg. Ag in ores and concentrates contg. (Smoot) 1442; reduction of Fe oxides by,—magnetic susceptibility of Fe-bearing (Sosman) 1580; polarization and index of absorption of Röntgen rays from (Kirschbaum) 1715; Fusion du paltine et dissociation (Sainte-Claire-Deville, *et al.*, book) 1874 (Le Chatelier, book) 2836; spectrum (Paulson) 2030; toning batch (Namias) 2039; thermometers (Hoffmann) 2331; sp. heat of (Fabaro) 2346; hydrogenation of C_2H_4 by colloidal (Paal) 2380, 2650; spark spectrum (Kail) 2481; quartzites (Duparc) 2497; quality of, ware (Burgess) 2609; baskets for combustion furnaces (Grant) 2611; adsorption of C_2H_2 by colloidal, and by, black (Paal) 2615; resistance and optical measurements on thin, films (Pogány) 2621; in chromite of Urals (Cerdan) 2750; removal from product of ore decompn. for vol. detn. of Fe (Brandt) 2854; activation of H and O by (Eggert) 3014; elec. resistance of, wires (Henning) 3148.

Platinum, analysis (Mylius) 419; in litharge (Michel) 1286; (Smoot) 1441; sepn. from other metals (Christensen) 1441; (Koifman) 2629; (Browning) 3041; assaying at Boss mine (Crampton) 3042; colorimetric (Groschuff) 3151.

Platinum, metallurgy of (Lyons) P 194; (Baur) P 289; recovering (Lyons) P 592.

Platinum alloys with Os (Zimmermann) P 2637; soly. of H in Pd and (Sieverts) 3006.

Platinum black, adsorption of C_2H_2 by (Paal) 2615.

Platinum chlorides, action of $PtCl_4$ on org. S compds. (Rây) 2890.

Platinum compounds of isonitriles (Chugaev) 87; with hydrazine (Chugaev) 274; with Te ethers (Fritzman) 2491; new series of tetravalent (Chugaev) 3181.

Platinum deposits in Ger. Paleozoic (Krusch) 580; in Nevada (Knopf) 1591 (Kennedy) 1889.

Platinumdichlorodibenzyl telluride (Fritzman) 2491.

Platinum group, catalytic action of colloidal metals of (Paal) 1184, 1883, 2380, 2650; organosols of metals and hydroxides of (Amberger) 3159; spark spectra of metals of (Kail) 2481.

Platinum ores, new element in, of Urals (Cerdan) 1266.

Platinum substitutes for conc. app. (Barth) 514; for bomb calorimeter (Parr) 3205; (Groschuff) 3150.

Pleura, pleural chyliform discharge (Khouri) 1200 (Patein) 2776.

Plöchl reaction (Knudsen) 300.

Plugs for combustion furnace (Cochran) 2611; fusible Sn boiler (Burgess) 3210.

Plumbism. See *Lead poisoning.*

Plumbojarosite (Knopf) 2633.

Pneumococcus, distribution of immune bodies in anti-, serum (Avery) 931; conc. of protective bodies in anti-, serum (Gay) 1197 (Chickering) 2937; hypersensitiveness to,

Digitized by Google

protein (Clough) 1503; action of ethylhydrocuprein on type strains (Moore) 2921; immunity (Tillgren) 3092; chemoserotherapy of exptl. infection (Moore) 3100.

Pneumoconiosis of metal polishers (Lafont) 1940.

Pneumonia, pituitary ext. in control of (Howell) 224; chemotherapy in (Baermann) 658; N in urine in (Signorelli) 1931; sputum in (Bertollini) 3097.

Poisoning by malonic nitrile (Somer) 104; Hg, among dentists (Schulte) 105; gas, in Mining and other Inds. (Glaister, Logan, book) 108; ergot (Rosenbloom) 108; in a silo (Hayhurst) 225; by coagulation-arresting and coagulation-accelerating substances (Busson) 334; resistance of porcupine to, by cantharides (Forni) 335; danger of, from $HgCl_2$ vapor (Moll) 486; by CO (Kohn-Abrest) 520; influence of diet on necrosis caused by hepatic and renal (Opie) 646; nitrite, from $BiONO_3$ (Zadek) 658; by $C_2H_2Cl_4$ in aeronautical factories (Grimm) 660; curare (Polimanti) 661; from duck eggs (Carles) 665; $CHCl_3$, and liver glycogen (Graham) 934; distribution of Hg (Rosenbloom) 934; by $C_2H_2Cl_4$ 1204; from wood preservatives (Moll) 1237; by HgCl after drinking Vichy water (Spindler) 1509; mushroom (Clark) 1509; action of ninhydrin (Loew) 1513; NaF (Stanton) 1943; late, with $CHCl_3$ and other alkylhalides (Graham) 2109; in Ca cyanamide factories (Koelsch) 2351; by water hemlock 2400; urinod (Hartman) 2401; (Fleissig) 2403; As (Ryan) 2403; injurious effect of exclusive oat diet leading to acid (Morgen) 2929; by inhalation of MeOH (Tyson) 2942; aniline (Hartsough) 2943; Hg (Kahn) 2943; $HgCl_2$ (Soer) 2944; liver and kidney function in exptl. P and $CHCl_3$ (Marshall) 2946; K, in nephritis (Smillie) 3091; vascular response in, from diphtheria toxin (Myers) 3293; by vapors from paint (Grimaldi) 3297; see also *Toxicology; Lead poisoning; Phosphorus poisoning.*

Poisons, Nachweis und Bestimmung von, auf Biol. Wege (Führer, book) 92; protein, of tonsil (Burmeister) 101; fixation by tissues (Haye) 225; detg. P in rat pastes (E'We) 513; digestive enzymes and fish (Konstanov) 654; action on nerve and muscle (Weill) 658; action on reductase (Harris) 809; Der chemische Giftnachweis (Ipsen, book) 901; Inorg. Plant, and Stimulants (Brenchley, book) 1072; Detection of, and Powerful Drugs (Autenreith, book) 1095; S. African plant (Juritz) 1186; removing "catalyzer," from oils or fats before hydrogenation (Ellis) P 1257; NaCl as, for stock (Guthrie) 1510; expts. on rabbits after removal of cerebrum—action of diff., producing spasms (Morita) 1511; plants 1659; poisonous woods (Matthes) 1661; and enzymic processes (Santesson) 2097; relation between cymarin and other cardiac (Windaus) 2380; yew and bryony (Jensen) 2403; of spiders (Walbum) 2552; detecting, in waters (Breteau) 2631; inactivation of serum by cobra (Hirschfeld) 2939; influence of narcotic, on reductase (Harris) 3253; physiol. action of Vaughan's "crude sol." (Underhill) 3253; disturbances of circulation caused by "shock" (Mautner) 3285; synergy and antagonism of drugs and (Traube) 3297; see also *Cobra poison; Toxins*, etc.

Poisson ratio, detg. (Jordan) 2997.

Polarimeters, const. temps. in (Pearce) 539.

Polarimeter tubes, cement for (Patterson) 3146.

Polarimetry. See *Optical rotation.*

Polarite in water purification (Don) 676.

Polarization. See *Light; Magnetic rotation; Optical rotation; Sugar, analysis.*

Polarization, electric, burners with salt spray (Beckmann) 173; of light emission of canal rays (Stark) 1145; and index of absorption of Röntgen rays from Pt and C (Kirschbaum) 1715; kinetic theory of galvanic, of galvanic cells, e. m. f. of magnetization, esp. (Gaicu) 3013; galvanic cell which reverses its polarity when illuminated (Swinton) 3173.

Pole effects in Fe arc (St. John) 2481.

Polishing, Galvanizzazione, pulitura e verniciatura dei metalli: manuale practico per l'industriale e l operaio (Werth, book) 1170.

Polishing machine, metallographic 2758.

Polishing materials for furniture (Lewis) P 358 (Waters) P 1551 (Strauss) P 1127, 2155; for painted and varnished surfaces (Donovan) P 726, 2460 (Keith) P 2459; (Carmichael) P 1098; cloth (Leach) P 1252 (Huggins) P 2803; metal (Levin) P 1979 (Littlefield) P 2803 (Ver. Elektrochem. Fab.) P 3218; for Au, Ag, etc. (Poulton) P 2432; for woodwork (Hancock) P 3119; (Challis) P 3339; see also *Abrasives.*

Pollen, germination of, of *Vitis vinifera* (Garino-Canina) 2773; multi-, vaccines in treatment of hay fever (Iskowitz) 2776.

Polonium, electrochemistry of (Hevesy) 1271; range of (Meyer) 2187.

Polyalcohols. See *Alcohols.*

Polybasic acids. See *Acids.*

Polycythemia, liver in acute (Lamson) 2778.

Polyhalite, crystal form of (Görgey) 3192.

Polyhydrocolchicine, prepn. of (Hug) P 3118.

Polyhydroxyazobenzene, a new (Valori) 1324.

Polyhydroxy compounds, influence of configuration on condensation reactions of (Irvine) 3229.

Polyhydroxy fatty acid esters (Grün) P 1096.

Polymerization, influence of light on, of Et itaconate (Stobbe) 209; in solns. (Stobbe) 301; products from animal oils (Kaempfe) P 387; of animal oils (Kaempfe) P 725; of various diolefins (Lebedev) 798, 799; of stilbene and Et phenylitaconate (Stobbe)

Digitized by Google

1174; in tri- and tetra-alkylated pyrroles (Fischer) 1486; of styrene (Stobbe) 1755; of ricinoleic acid (Fokin) 1898; products from butadiene (Badische) P 2328; of oxides (Mixter) 2478; of cyanamide (Werner) 2514; of soy bean oil (Taverne) 2716.

Polymers of phenylacetaldehyde (Stobbe) 207; distinguishing from polymorphs (Sidgwick) 2062.

Polymethylenebisimino acids, Cu salts of (Coutelle) P 2696.

Polymorphism of 4-hydroxybenzylideneamines (Senier) 202; of Zn (Petrenko) 735; of codein and narcotine (Kremann) 909; and spectral absorption (Schaum) 1003; of vanillylidenearylamines (Senier) 1906; distinguishing tautomeric, isomeric, and polymeric from polymorphic substances (Sidgwick) 2062; of anisylidenearylamines (Senier) 3228.

Polyneuritis, extn. of efficaceous constituents of rice bran (Murai) 469; exptl. (Ohler) 480; carbohydrate ration and, in birds fed on polished rice (Braddon) 1192.

Polypeptides, synthesis from higher fatty acids (Hopwood) 610; synthesis by action of glycerol on glycocoll (Maillard) 1310; introduction of guanidine nucleus into (Clementi) 1473, 2089; enzymes in malt producing (Adler) 2123; neutral salt compds. of (Pfeiffer) 2652; action of peptolytic enzymes on (Clementi) 2910; spectrographic study (Kober) 3252; synthesis of, by enzymes (Abderhalden) 3258.

Polyphosphates. See *Phosphates.*

Polyporus applanatus, chemistry of (Zellner) 3083.

Polysaccharides of fungi (Dox) 814; biochem. synthesis of (Bourquelot) 1339.

Polysulfides. See *Sulfides.*

Polythionates, recovering S from, solns. (Feld) P 858; (Sander) 2042, 2357.

Polythionic acids, detg., by KIO_3 (Jamieson) 1886.

Polzenite -trachydolerite-phonolite (Scheumann) 582.

Pomade, analysis of Roman (Reutter) 1668.

Poppy, Oriental (Klee) 298 (Gadamer) 300; $Mg_3(PO_4)_2$ in, capsules (Kimiel) 2968.

Poppy oil phosphorate (Willstätter) 309.

Porcelain, disinfecting and cleaning (Mattes) P 136; cleaning (Welwood) P 136; (Dorfner) 957; elec. insulators (Boehm) P 1009 (Foster) 2624; spark plug (Singer) P 1104; metallization of (Marino) 1676; testing elec. (Chernyshoff) 1879; articles (Jeffery) P 1984; elec. (Creighton) 2035; preventing crumbling (Herzog) P 2301; colors for (Eichler) P 2579; lithophane, ware (Greifelt) P 2807; properties of tech., of Berlin Royal Porcelain Factory (Rieke) 3342; Die technischen Eigenschaften des Porzellans (Rosenthal, book) 3343; attaching rubber to (Moench) P 3379; see also *Ceramic ware.*

Porcupine, resistance to cantharides (Forni) 335.

Porosity and disintegration of concrete 139; of building stone (Campbell) 240; of wood (Dunlap) 2140; effect on capacity of storage batteries (Heim) 2839.

Porphyrins, sensitizing action of (Hausmann) 656.

Porphyrite (Beger) 2050.

Porphyry, ferrite halos around zircon in quartz (Grengg) 188; SiO_2 in agate (Liesegang) 1731.

Portland cement. See *Cement, hydraulic.*

Potash from feldspar, etc. (Anon.) 128 (Cushman) 695 (Brown) P 696, 704 (Quinney) 2131; production and fertilizer value of citric-sol. (Waggaman) 232; ind. in 1913 (Hof) 236; waste (Umney) 356; deposits in Spain (Anon.) 427, 1086 (Hurst) 2571; ashes as source of (Russell) 684; waste lyes and drinking water (Noll) 830 (Vogel) 1083, 1208, 2410 (Tjaden) 2955; sources of (MacDowell) 903 (Cresswell) 2131; in Texas (Phillips) 903; production of German, salts in 1913 (Krische) 1086; kainite of Kalusz (Kolski) 1372; large crystals (Häberlein) P 1377, 1378; from alunite (MacDowell) P 1535; in Texas Permian (Udden) 1733; from kelp (Oppenheim) P 1977 (Cameron) 2293; utilization of mother liquors (Coppadoro) 1977 (Bambach & Co.) P 2790; tachhydrite in, deposits (Kling) 2045; production in California (Norton) 2293; waste liquor of, ind. (Berge) 2294; deposits (Hurst) 2431; utilization of $MgCl_2$ from, liquors (Chem. Fab. Buckau) P 2439, 2803; detecting taste of, in drinking water (Matzahn) 2680; cement rocks contg. (Spencer) P 2445; situation (Hart) (Dolbear) 2571; from siliceous minerals (Melkman) P 2573; from Queensland "prickly pear" 2797; sawmill waste as source of (Gimingham) 2797; world's, 2797; transformation processes of, salt deposits (Rózsa) 2862; detn. of availability of, in feldspathic fertilizers (Miller) 3318; availability of (Vanatta) 3319; from igneous rock (Spencer) P 3335; in Chile (Salcedo) 2497; see also *Fertilizers; Potassium analysis; Potassium carbonate; Potassium hydroxide; Potassium oxide.*

Potassium, photoelec. cells (Ives) 16; in cerebrospinal fluid in disease (Rosenbloom) 98; Ueber die Nutzbarmachung der Kali-Endlaugen (Dietz, book) 128; system: H_2O–H_3PO_4– (Parker) 168; granitic soil, and hay (Curry) 501; cell in comparison of intensity of colored solns. and in detg. degree of illumination (Abderhalden) 639; thermal expansion of (Bernini) 995; breaking down silicates contg. Al and (Peacock) P 1010; recovering, from feldspar (Peacock) P 1099 (Bassett) P 1230; absorption of H by Na-, electrodes (Gowdy) 1419; allotropy of (Cohen) 1565; from soil (Hopkins) 2416 (Hilgard) 3316

Digitized by Google

effect on respiratory and cardiac centers (Hooker) 2779; action on heart vagus tonus (Hering) 2935; stimulating action on heart (Hering) 2935; poisoning in nephritis (Smillie) 3091; photoelectricity of (Wiedmann) 3166.

Potassium, analysis (Ledoux) 184; in mixed fertilizers (Keitt) 348; in plants (Rollov) 1069; in shaving soap (Davidsohn) 1401; perchlorate method (Thin) 1442; in wines (Kling) 1655; (Vaubel) 1730; (Winkler) 2042; sepn. of K and Na (Hill) 2363; in mixt. of Na and K salts (Okada) 2492; vol. (Ajon) 3188; perchlorate and gravimetric cobaltinitrite methods (Jarrell) 3318; (McDonnell) 3318.

Potassium acetate compds. with pyrocatechol and phenol (Weinland) 319.

Potassium amide reactions with salts of Cd, Ni and Cr in liquid NH_3 (Bohart) 3182.

Potassium ammonoargentate (Franklin) 1016, 1284.

Potassium ammonoborate (Franklin) 1016, 2851.

Potassium ammonocadmiate (Bohart) 3182.

Potassium ammonocalcidate (Franklin) 1016.

Potassium ammononickelate (Bohart) 3182.

Potassium ammonosodate (Franklin) 1016.

Potassium ammonostrontiate (Franklin) 2851.

Potassium arsenite, liquor kalii arsenicosi (Richter) 1659.

Potassium benzyl ammonoacetate (Franklin) 1016; monoammonate (Franklin) 3038.

Potassium bromide, detg. As by heating in HCl with hydrazine salts and (Jannasch) 1286; compd. with sarcosine (Pfeiffer) 2653.

Potassium carbonate, dissociation of $KHCO_3$ (Caven) 986; soft soaps without (J. B.) 2605.

Potassium carbonitride (Peacock) P 1010, 1279.

Potassium chlorate (Laib) P 2190; oxidation of S with (Federer) 2918.

Potassium chloride, systems formed by $SrCl_2$, $BaCl_2$, and NaCl or (Vortisch) 182; and growth of corn (Caldwell) 685; system: (Ba–K–Na)Cl (Jänecke) 895 (Vortisch) 896; solubilities of mixts. of NaCl and, in HCl (Hicks) 1268; double salts of $SnCl_2$ and (Fujimura) 1284; concn. cells (MacInnes) 1709; (Consolidierte, etc.) P 1981; potential of Ag against Ag ion in conc. solns. of (Forbes) 2026; (Hubmann) P 2440; and germination (Micheels) 2922; elec. resistance of soln. (Pieri) 3191; (Bradburn) P 3334; see also *Alkali metal chlorides.*

Potassium chromate, diet and nephritis caused by (Opie) 646.

Potassium citrovanadate (Barbieri) 3038.

Potassium cyanide in detg. Zn (Treadwell) 899; reagent for tanning materials (Bennett) 1703; effect on trees (Shattuck) 1963; changes in permeability of plasma membrane by (Krehan) 2102; method for detg. As (Klason) 2493; action in tissues of plant (Moore) 2661.

Potassium dichromate, preservation of milk samples with (Ketel) 491; crystn. of sphere of (Artemeev) 566; in detg. Fe (Brandt) 899; reaction with $FeSO_4$ (Neidle) 2826.

Potassium dioxalodiaquochromiate, action of glycocoll upon red (Werner) 34.

Potassium dioxalodihydroxochromiate (Werner) 36.

Potassium dioxaloethylenediamminechromiate and KI addition product (Werner) 34.

Potassium dioxalohydroxoaquochromiate (Werner) 36.

Potassium disalicylatodiamminechromiate (Barbieri) 2849.

Potassium *p*-ethoxyphenyl ammonoacetate (Franklin) 1016, 3038.

Potassium ethylate, ionization and cond. in abs. EtOH (Robertson) 2018.

Potassium eugenolate (Weinland) 2083.

Potassium ferrocyanide and vegetation (Haselhoff) 1963.

Potassium halides, viscosity of aq. (Kraus) 262.

Potassium hydroxide, action on dihydroxy acids (Le Sueur) 603; action on nitroamine of 4,6-dinitro-3-methylanisidine (Reverdin) 788; action on colchiceine (Windaus) 1481; action of molten, on colchicine (Windaus) 1481; action on atacamite (Chumanov) 3039; H- and hydroxyl-ion activities of solns. of, in presence of neutral salts (Harned) 3156; use in curd soaps (Schaal) 3371.

Potassium indoxyl sulfate (Jolles) 1308.

Potassium iodate, estg. I in unguentum kalii iodati (Darge) 121; photolysis of (Mathews) 407; oxidation of sulfides with (Dean) 1585; detg. polythionic acids by (Jamieson) 1886.

Potassium iodide, growth of, crystals on muscovite (Johnsen) 41; test for CO in blood (Sand) 215; system: Et_2O–H_2O–KI–HgI_2 (Dunningham) 401; action on heart and blood vessels (Macht) 659; system: H_2O–KI–I (Jones) 878; elec. cond. and viscosity of, in mixts. of EtOH and H_2O (Wightman) 993; preserving, solns. (Bouyer) 2289; compd. with sarcosine (Pfeiffer) 2653; method in detn. of Cu in presence of Sn (Coltman) 2747; Influence of Concn. of, on Rate of Diffusion of I in KI Soln. (Diggs, book) 3167; effect on embryo sacs of seed-plants (MacDougal) 3271; elimination in urine (Wovschin) 3298; formula for iodized (Richard) 3329.

Potassium nickelomolybdate (Barbieri) 897.

Potassium nitrate, system: KNO_3, NaCl, H_2O (Leather) 181; detg. biochem. O demand by (Lederer) 1956; and germination (Micheels) 2922; replacement in enamel industry (Tostmann) (Kraze) 3341.

Potassium nitride (Peacock) P 1011.

Potassium oxalate, bleaching leather with, 2325.

Potassium palmitate method for detg. hardness in water (Pflanz) 1518.

Digitized by Google

in) 1080; Na silicate as, for prepn. evolving O (Kind) 2971; (Reppin) P 1238.

Preserves. See *Conserves.*

Press for W rods (Gladitz) P 270; turf (Hirsch) P 522; for obtaining liquids from nuts, etc. (Schueler) P 1262, 1707; soap (Dippel) (Lehmann) P 1403 (Klump) P 1402; brick (Müllenbach) P 2579; for bag filter (Berrigan) P 3147.

Pressor substances of normal urine (Bain) 1075.

Pressure, reduction of gas vol. to normal (Wendriner) 12; conversion of barometric readings into units of (Covert) 17; displacement of spectral lines and mol. constitution (Livens) 18; produced in detonation of high explosives or by impact of bullets (Hopkinson) 151; adiabatic and isothermal compressibilities of liquids between 1 and 2 atms. (Tyrer) 172; figures on mica (Wetzel) 281; coagulation of albumin by (Bridgman) 327; regulating, in stills (Rogers) P 375; internal, of liquids (Herz) 402; stopcocks (Randall) 537; effect on elec. cond. of Ag-Al alloys (Beckman) 779; influence on photochem. ozonization (Warburg) 883; effect of, on combustion of explosive mixts. of gas and air (Terres) 1248; multiple filtration under (Missong) P 1263; and breakdown strength of oils (Kock) 1277; regulating gas (Heinemann) 1281 (Browning) 2167; influence on reaction velocity in condensed systems (Cohen) 1421; formula connecting, and temp. of satd. steam (Godbeer) 1422; measuring small dissociation (Sosman) 1557; casting molten materials under (Bierbaum) P 1559; diagraming internal, as negative (Mills) 1561; variation of triple-point with hydrostatic (Porter) 1575; effect on microörganisms (Hite) 1812; influence on explosibility of CH_4-air mixts. (Burrell) 1844; measuring, of light (West) 1871; effect on arc spectra (Duffield) 1872; in cold rolling brass (Shepard) 1893; and the elec. cond. of Te (Beckmann) 2026; influence on elec. cond. of pure metals (Beckmann) 2026; recording, variations due to explosions in tubes (Morgan) 2149; distn. of petroleum (Bjerregaard) 2450; regulating tank (Müller) P 2450; equalizing (Blohm) P 2472; changes of phase under (Bridgman) 2479, 2617; temp. and internal, of gas (Leduc) 2729; unmixing in binary system in which 3-phase, is greater than sum of v. p. of components (Scheffer) 3024; see also *Osmotic pressure; Vapor pressure; Blood pressure; Pressure, high.*

Pressure, high, streaming of gases under (Cranz) 12; valve, 258; displacement of metals by H at (Ipatiev) 766; spark potentials in gases at (Hayashi) 999; NH_3 equil. under (Tamaru) 1423; gaseous combustion at (Bone) 2582, 2976; polymorphic transformation of solids under (Bridgman) 3000; sp. heats of gases at (Holborn) 3148.

Pressure, low, reactions at (Langmuir) 1264, 1562; diffusion of gases through Hg vapor at (Gaede) 2020; diffusion of gases at, made visible (Knipp) 2477; receiver for fractional distns. under (Bogert) 2725; mobility of negative ions at (Thomson) 3025.

Preuss apparatus for detg. C, 2725.

Prickly pear as fertilizer (Johnston) 2559; potash from Queensland, 2797; feeding expts. (Horn) 2952; carbohydrates of (Hare) 3085.

Priming composition (Embury) P 381; (Rheinisch-West., etc.) P 862; 1392; cartridge, 1392; for detonators, etc., 1392; (Eichler) P 1398; for explosives (Munroe) 1547; (Stettbacher) 1691.

Primula, flavone as farina of (Müller) 2549.

Primuline, dyeing (Haller) 526.

Printing, paper sheets for, plates (Dittman) P 237; lithographic, surfaces (Weck) P 565; platinotype (Willis) P 565; lithographic (Nemec) P 763; transferring pictures from a high to a flat form (Schupp) P 850; gelatin colors for forms (Charles) P 850; forms (Schlect) P 850 (Rieder) P 850, 1230 (Emmert) P 1283 (Dittmann) P 2356 (Beck) P 2842; color-plates (Turkin) P 973; prepg. lithographic surfaces (Ray) P 1099 (Wood) P 1228; etching forms (Rotophot-A.-G., etc.) P 1230; surfaces (Rotophot-A.-G., etc.) P 1283; lithographic, on linoleum (Wood) P 1551; blocks (Kristensen) P 1672; fabrics (Farbw.) P 2315; plates (Ormay) P 2355 (Molling & Co.) P 2356; raised (Lipsius) P 2459, 3369; printers' overlays (Cook) P 2459; printers' blankets (Healy) (Palmer) P 2573; treatment of waste liquors (Kershaw) 2785; compn. for printers' inking rollers (Usher-Walker, Ltd.) P 3120; lithographic, of textile fabrics (Flahenden) 3131.

Prisms (Davis) P 2806.

Producer gas. See *Gas, illuminating and fuel.*

Proenzymes. See *Enzymes.*

Projectiles, bullets (Hopkinson) 151 (Utz) 3211; English air-torpedo bomb, 1116; hardening (Hadfield) P 1600; W (Vasselin) 1742; manuf. of shells, 2370; shells (Lewes) 2592; testing shells, 3206; manuf. of schrapnel shells (Heyn) 3361.

Propane, properties (Timmermans) 295; v. p. (Burrell) 2614.

Prophylaxis, immunized milk in, of typhoid fever (Rosenberg) 3294.

Propionaldehyde formation from propylene glycol, etc. (Neuberg) 3058.

Propionic acid, nonanyl and methylbenzylcarbinyl esters (Kenyon) 63, 64; 1-naphthylhexylcarbinyl ester (Kenyon) 293; fusibility curve of system $EtCO_2H$–HCl (Baume) 547.

Propionin, optically active (Abderhalden) 310.

Propionylketophenylparaconе (Kötz) 622.

α-Propionylpyrrole, semicarbazone (Chelintzev) 88.

Pyrites, Co-Ni- (Vernadskii) 42; detg. (Allen) 187; bisulfite liquor (Drewsen) P 237; X-ray expts. with (Ewald) 554; exam. of soils contg. (Rodt) 1104; concretions in Karroo sandstones (Young) 1159; S from (Hall) P 1374; deposits of South Norway, geology and petrography of (Falkenberg) 1733; Gross-Fragant (Reitzenstein) 1733; roasting furnace (Barth) 1706; detg. Zn in (Rubricius) 1729; mines of Norway (Udhany) 1889; genesis (Pilz) 2048; detg. S in (Moore) 2203; structure of, -barite deposit as basis for geol. interpretation (Bergeat) 2861; smelting (Stören) 3198; *see also Iron sulfides; Iron, metallurgy of.*

Pyrocatechol, compd. of Al—of Mg (Weinland) 305; compds. with metallic salts (Weinland) 319.

Pyrocatechol - o - carboxylic acid (Bayer & Co.) P 1830.

Pyroelectric excitation, temp. and (Boguslawski) 264.

Pyrogallol compd. with Fe (Weinland) 305; in gas analysis (Anderson) 2199; oxidation product of (Nierenstein) 3229; purpurogallin-yields in oxidation of (Bach) 3255.

Pyrogenesis, action of *B. typhosus* (Sebastiani) 2551 (Bergey) 2667.

Pyrogenetic substances, effect of direct heating and cooling of heat center on temp. action of diff. (Hashimoto) 2268.

Pyroligneous acid, indicator in (Johlin) 2309.

Pyrometers (Arndt) P 4; elec. (Behrens) 25 (Anon.) 981 (Mitchell) P 1707; optical (Churchward) P 167 (Lagoutte) P 259 (Siemens & Halske) P 1139, 1863; radiation (Whipple) P 540 (Burgess) 1712; 981; for shop use (Johnson) 982; recorder, 1409, 3146; thermoelec. (Zimmerschied) P 1863; (Clark) P 2331; tubes (Malm) P 2806.

Pyrometry, review (Darling) (Paul) 1706; (Whipple) 2480.

Pyromorphite, radioactivity of (Bamberger) 1716; compn. (Amadori) 2751.

Pyrones, derivs. of 2- and 4- (Barger) 2059; catalytic reduction of γ- (Borsche) 2093.

Pyrophoric alloys (Kratky) P 51; (Olsen) 193; (Kremann) 1152; gas lighter (Kellermann) P 1993.

Pyrophoric property, reducing, of catalysts (Morey) P 849.

Pyrophosphoric acid structure (Balareff) 276.

Pyrophyllite, geology of alunite-, rocks of Kyuquat Sound, Vancouver Is. (Clapp) 1022; (Clapp) 2046.

Pyrosols (Nieuwenburg) 3159.

Pyrotechnic compositions, steel chips for (Jedel) P 2453.

Pyroxene, syenite (Hackl) 583; aluminous (Cesaro) 3193.

Pyroxylin, solvent for (Kniffen) P 153; varnish (Kniffen) P 1547; coating with (Koontz) P 2601.

Pyrranthraquinone (Piloty) 456.

Pyrrindoquinone (Piloty) 456.

α - Pyrrolealdehyde, prep. (Chelintzev) 88 (Alessandri) 1044.

***N* - Pyrrolecarboxylic acid**, Et ester (Chelintzev) 1472.

Pyrrolemagnesium bromide, action of esters on (Chelintzev) 87.

Pyrroles, action of tertiary, on magnesyl compds. (Oddo) 73; (Fischer) 462; alkylation of (Oddo) 788; (Bayer & Co.) P 1097; isomerism of organometallic compds. of (Chelintzev) 1472; bases formed on alkylating (Plancher) 1477; polymerizations in tri- and tetra-alkylated (Fischer) 1486; Mg complexes of (Chelintzev) 2071; (Almstrom) 2875; new pyrrole dye (Chelintzev) 3055.

Pyrrolidines, derivs. (Chem. Fab. E. Schering) P 1829, 2569; alcs. (Bayer & Co.) P 2427, 2569.

***l* - Pyrrolidonecarboxylic acid**, transformation of glutaminic acid into (Foreman) 632.

Digitized by Google

o - Pyrroylpyrrolic acid and lactone (Piloty) 456.
α - Pyrryldiphenylcarbinol (Chelintzev) 3055.
Pyruvic acid and fermentation of sugar (Neuberg) 472; decomp. by microörganisms (Neuberg) 472; in alc. fermentation (Oppenheimer) 924; and formation of $AcNHC_6H_4CO_2H$ in organism (Hensel) 1640; 2-pyridylhydrazone and Et ester (Fargher) 2890; 2-quinolylhydrazone and Et ester (Fargher) 2890; fermentation, by bacteria (Karczag) 2921; estg. lactic acid in presence of (Czapski) 3081.

Quantum, elementary, of electricity (Zerner) 2030 (Konstantinowsky) 2182.
Quantum effect, in high frequency spectrum (Landé) 175.
Quantum theory and calcn. of rotational energy of diatomic gas (Holm) 14; (Einstein) 17; and mol. structure (Goldhammer) 17; equation of state of gases and (Sackur) 399; modification (Planck) 883; (Knapp, book) 886; of radiation and line spectra (Wilson) 2481; and ultra-red absorption spectrum of water vapor (Eucken) 2622; Anwendung der Quantenhypothese in der kinetischen Theorie der festen Körper und der Gase, in elementaren Darstellung (Valentiner, book) 2836; Die Grundlagen der Quantentheorie in elementarer Darstellung (Valentiner, book) 2836; of radiation and structure of atom (Bohr) 3016; connection of Sommerfeld action principle with Planck's (Wolfke) 3021.
Quarries, treatment of waste waters from (Kershaw) 1358.
Quartz, absorption, reflection and dispersion consts. of (Coblentz) 409; vein at Neudorf, Gross-Ullersdorf, Moravia (Kretschmer) 584; m. (Boehm) P 701 (Industriewerke Ges.) P 1156; silvering, fibers (Williams) 749; heating elements (Katz) P 761; rotatory dispersion in (Lowry) 1003; fusing hollow articles from, sand (Voelker & Co.) P 1104; Au-bearing (Slavik) 1290; etched figures of Japanese (Ichikawa) 1445; X-ray spectra of, crystals (Bragg) 1579; mining and Au recovery (Aitken) 1892; domestic flint 1986; crystals (Grill) 2857; opalescent (Kalkowsky) 3192; from pegmatites (Daly) 3197; for fire brick (Richter) 3341; see also *Glass*.
Quartzite, schist (Michel) 1449; platiniferous (Duparc) 2497.
Quartz lamps. See *Lighting, electric (vacuum tube lights)*.
Quassiin (Parker) 2789.
Quaternary salts. See *Salts*.
Quaternary systems, $CaCO_3$–$MgCO_3$–CO_2–H_2O (Leather) 181; Et_2O–H_2O–KI–HgI_2 (Dunningham) 401; equil. in—mixts. with 2 liquid layers and alloy of Ni–Cu–Au–Ag (Parravano) 1024.
Quebrachine (Barger) 2888.
Quebracho bark alkaloids (Ewins) 606.
Quenching time of heating and (Portevin) 588; bath for steel (Brayshaw) P 782; app. for coke (Schöndelng) (Berlin-Anhaltische, etc.) P 1243; hardening of metals by (Edwards) 2213; and deformation of steel (Bogitch) 2372.
Quercitrin (Perkin) 2889.
Quicklime. See *Lime*.
Quincke's disease and pregnancy (Ballerini) 1504.
Quinic acid (Emde) 3233.
Quinine, amaurosis (Terrien) 107; and derivs. in trypanosomiasis (Romanese) 659; double halides with urea (Golubev) 1470; sesquihydriodide (Golubev) 1471; and Blackwater fever (Stephens) 1510; detection of vanillin in, wines (Chauvin) 1529; and metabolism (Silberstein) 1940; and striated muscles (Secher) 2110; sulfate (Polak) 2125; detg., in urine (Nischi) 2393; sepn. of strychnine and (Watson) 2969; iodometric estn. (Richter) 3326; tasteless derivs. (Lucchini) 3327.
Quinine acetoxybenzoate (Vanino) 951.
Quinine alkaloids. See *Cinchona alkaloids*.
Quinine p - chloro - m - cresotinate (von Walther) 2642.
Quinine pyramidone camphorate (Nardelli) 1806.
Quinine salts, tasteless (Sartorius) P 1976.
Quinine sulfate. See *Quinine*.
Quiniodol (Mouchet) 1828.
"Quinocarbonium salts," theory of (Schlenk) 1917.
Quinoidine, characters, compn. and lethality to protozoa (MacGilchrist) 2947.
Quinoid products of thianthrenes (Fries) 786.
***m*-Quinoids** (Schlenk) 1916; (Bamberger) 3236.
Quinol di-*p*-nitrobenzoate (Gray) 2895.
Quinoline addition product with **fluorescein** (Oddo) 74; ketones (Kaufmann) P 356, 2427; cardiac effect of (Fredericq) 658; electrolytic reduction of (Bredenberg) 2243; amino alcs. (Kaufmann) P 2569.
Quinolinecarboxylic acids (E. Schering) P 127.
Quinolinephenylbetaine salts (Weinhagen) 2231.
***i* - Quinolinium hexabromo-osmiate** (Gutbier) 1440.

antitoxic action of rattlesnake serum on, venom (Welker) 2671.
Rayleigh's formula (Boutaric) 406.
Rayleigh's law (King) 13.
Rays, fluorescence of gases excited by ultra-Schumann (Steubing) 16; biochem. of action of (Neuberg) 58; Stark-effect with positive (Bois) 408; coloration of salts by Becquerel (St. Meyer) 411; residual, of diat. substances (Mandersloot) 1713; Schumann, effects on protoplasm (Bovie) 1790; ultimate (Gramont) 2482; ionization by positive (Campbell) 2623; Schumann, for sterilization of liquids (Bovie) 2661; penetration of upper eye-lid (Solger) 2905; positive (Gehrcke) 3149; see also *Radiation; Rays, α,β,γ*.
Rays, canal, spectral-analytical demonstration of mol. (Stark) 13; (Goldstein) 15; passage through substances (Taubenberg) 883; polarization of light emission of (Stark) 1145; Stark-effect for (duBois) 1578.
Rays, cathode, production of soft X-rays by impact of positive and slow (Thomson) 21, 1006 (Laird) 1716; luminescence of minerals in (Michel) 166; salts colored by (Goldstein) 410 (Baly) 1271; disturbing factor in expts. on (Devik) 411; (Mayer) 554; (Minton) 752; emission of gases under influence of (A. B.) 1141; ionization of metals by (Campbell) 1429; slow (Anon.) 1581 (Thomson) 2187; tubes (Minton) 2486, 2735 (Tressler) 3166; Lorentz-Einstein formula for (Guye) 2621; treatment of Bi with (Jorissen) 3025; measurements of ϵ/μ on (Gehrcke) 3150; light excitation of gases by (Seeliger) 3150.
Rays, Röntgen, electrification by (Bedreag) 19; and cryst. structure (Barlow) 20 (Bragg) 167 410, 1581, 2838, (book) 3171; absorption coeffs. of (Bragg) 21 (Moore) 2486; production of soft (Thomson) 21, 1006; diffraction patterns (Strong) 22; ovaries and (Fraenkel) 107; luminescence of minerals in (Michel) 166; similar to Ra γ-rays (Dessauer) 174; radiation of edges with (Laub) 174; refraction of, on Pb edge (Laub) 174, 552; absorption and wave-length for (Siegbahn) 175; spectrum of Pt (Seemann) 175 (Wagner) 1717; inspection of steel casting (Davey) 436; absorption of (Kossel) 552, 1715; radiation and at. nos. (Broeck) 552; and velocity of sound in A (Streider) 553; and cubic crystals (Ewald) 554; and interference in crystals (Friedrich) 554; and velocity of sound, in gases (Küpper) 554; spectral photometry of (Friedrich) 555; and action of enzymes (Richards) 632; X radiation and calcification (Cluzet) 663; spectra (Siegbahn) 750 (Webster) 1714 (Sommerfeld) 2032 (Glagolev) (Broglie) 2350; asym. diffraction and rediffraction of (Rankin) 752; Coolidge tube in metallurgy (Davey) 780; transmission through substances—spectrum (Nishikawa) 888; exam. of "built-up" mica (Moore) 1008; and crystals (A. B.) 1141 (Bragg) 1579; hard (Dessauer) 1148; physics of (Davey) 1270; photography (Bauermeister) P 1282 (Alexander) 2485; influence on "protective enzymes" of Abderhalden (Keitler) 1348; relation between wave lengths and their absorption coeffs. (Bragg) 1429; and formation of bone callus (Salvetti) 1509; soft 1581; reflection of (Bragg) 1581; interference phenomena with, and crystal gratings (Laue) 1581; secondary effects (Weeks) 1714; electrons from metal foils under (Hoepner) 1715; photographs of the diamond (Keller) 1715; from Pt and C polarization and index of absorption of (Kirschbaum) 1715; production by cathode rays (Laird) 1716; corpuscular radiation liberated in vapors by homogeneous (Moore) 1718; influence of, on the complement and hemolytic amboceptor (Scaffidi) 1805; model for illustration of, interference phenomena (v. Hauer) 1862; measuring (Fürstenau) P 1876, 2736 (Bronson) 2735; screen (Veifa-Werke, etc.) P 1876 (Bucky) P 2727, 2736; producing (Reiniger, etc.) P 1877; dispersion (Debye) 2032; emission law for homogeneous (Laub) 2033; radiations produced by (Laub) 2033; spectrum investigations with (Wagner) 2033; and condensation of water vapor (Strieder) 2034; fluorescence of uranyl salts under (Wick) 2186; emission and absorption of gas residues in Röntgen tubes and emission of (Cardani) 2188; review (Davey) 1581, 2350; asymmetric distribution of secondary electronic radiation produced by X-radiation (Philpot) 2735; influence of emanations on seed of *Vicia faba* and on development of plants (Pfeiffer) 2925; visualization of space lattice in crystals by (von Laue) 3000; metal colloid formation when exposed to (Nordenson) 3003; efficiency of production of, from Coolidge tube (Rutherford) 3025; max. frequency of, from Coolidge tube for diff. voltages (Rutherford) 3025; targets (Coolidge) P 3027, 3171; Se in measurement of energy of (Voltz) 3027; and production of antibodies (Hektoen) 3093; action of Et_2O and, on eggs and embryos (Haecker) 3102; (Coolidge) 3168; "green" fluorescence of (Jackson) 3168; interference of, and crystal structure (Glocker) 3169; interference phenomena when, pass through diatomic gas (Ehrenfest) 3170; diffraction of, in birefracting crystals (Jaeger) 3171; detection of blow-holes in metal by (Tonamy) 3207; physiological action (Dietlen) 3282; see also *Röntgen tubes*.
Rays, ultraviolet. See *Light, ultraviolet*.
α-Rays, mass and velocities of (Rutherford) 21; and interaction of H and Cl (Taylor) 412; and ranges in Act series (McCoy) 555; velocity of, from Ra A (Turnstall) 1005; tracks of, in photographic films (Kinoshita) 1430; of Bi from pitchblende (Meitner) 1716; variations in range (Flamm) 2186; photographic action of (Sahni) 2623; visualizing, upon surface of radioactive substances

Digitized by Google

(Schmidt) P 2736; passage of, through H (Marsden) 2837; counting (Geiger) 3150; relation between, activities and ranges of Ra (McCoy) 3169; Geiger app. for photographic registration of (Shrader) 3170; see also *Helium*.

β-Rays and structure of atom (Broek) 19; spectrum of, of Radio-Th and Th X (Baeyer) 1717; absorption of (Varder) 1875; from γ-rays (Kohlrausch) 2186; photographic action of (Sahni) 2623; elec. d. and absorption of (Sanford) 2735; action on mixts. of arsine and O (Reckleben) 2837; excitation of γ-rays by (Szmidt) 2837; counting (Geiger) 3150; Geiger app. for photographic registration of (Shrader) 3170.

γ-Rays and structure of atom (Broek) 19; distribution of energy in (Szmidt) 20; X-rays similar to Ra (Dessauer) 174; and velocity of sound in gases (Küpper) 554; ionization by (Peirce) 888; absorption in Pb of (Richardson) 1875; chem. effect of penetrating Ra rays (fumaric and maleic acids) (Kailan) 1301; β-rays from (Kohlrausch) 2186; measurements with Meso-Th (Meyer) 2186; photographic action of (Sahni) 2623, action on mixts. of arsine and O (Reckleben) 2837; excitation by β-rays (Szmidt) 2837; detg. Ra by γ-ray measurements (Bothe) 3026; (Gehrcke) 3150.

X-Rays. See *Rays, Röntgen*.

Reaction products, recovery of (Koch) P 415.

Reactions, effecting gas (Meigs) P 27 (Brit. T.-H. Co.) P 2434 (Centralstelle, etc.) P 2727; flame (Bancroft) 167, 1573; vessel for catalytic (Anderson) P 399, electron emission in chem. (Haber) 404; (Just) P 1139; chem., in light (Sernagiotto) 468; measuring rate of (Wright) 547; steric hindrance of chem. (Wenzel) 599; in electroplating (Ottman) 756; of frog muscles (Pechstein) 929; change in wt. during chem. (Manley) 988; temp. coeffs. of reciprocal, of I-iodate equil. (Skrabal) 996; elec. arc furnaces for effecting gas (Wilmowsky) P 1009; bringing gas and liquid into (Chew) P 1138; exchange, in soil (Gedroits) 1215; chem., at low pressures (Langmuir) 1264, 1562; chem., in anhydrous hydrazine (Welsh) 1284; theory of (Baly) 1411; effecting chem. (Bühler) P 1560 (Wierusz-Kowalski) P 2133; effecting, at high temp. (Meyer) P 1674; between 2 gases (Trautz) 1708; tower for gas (Raschig) P 1862; sensitiveness of chem. (Barladean) 1864; conjugated (Dain) 1864; in anisotropic substances (Tammann) 1864; kinetics of photochem. (Berthelot) 1873 (Schidlof) 2479; new, for compds. contg. pyridine nucleus (Chichibabin) 1901; mechanism of Strecker's (Stadnikov) 1901; dye- (Ulrich) 1996; catalytic, in liquids (Hagemann) P 2003; packing for, towers (Raschig) P 2433; theory of gas (Löwy) 2169; kinetics of chem. (Orlov) 2178, 2479; temp. coeff. of photochem. (Berthelot) 2184; biol., of vegetable proteins (Wells) 2400; in solid state and burning of limestone (Rudell) 2444; effect of temp. on heat evolved in (Mellor) 2478; kinetics of bromate-bromide (Skrabal) 2480; intermediate occurrence of free radicals in (Wieland) 2539; of silks made from cellulose (Matos) 2595; kinetics of bromate-nitrite (Kurtenacker) 2617; between gases and liquids (Reid) 2609; detg. reaction potentials of Ag and their significance (Reedy) 2838; theory of, in steps (Wegscheider) 2881; role of enzymes in chem. changes (Maryott) 2906; disturbances of photochem. gas (Weigert) 3014; emission of corpuscles in chem. (Tanatar) 3015; in liquid NH_3—action of acid amides on amides, imides and nitrides of heavy metals (Franklin) 3037; relation between electrolytic and chem. processes (Reichinstein) 3019; of ions and mols. (Marshall) 3155; chem., in colloids (Jacobsen) 3159; effecting chem. gas (Andriessens) P 3178.

Reaction velocity of Cl and H (Melander) 31; NO + Cl_2 (Trautz) 276 (Coates) 277; influence of substituents on (Olivier) 442; in phototropic transformations (Padoa) 1144; pressure and, in condensed systems (Cohen) 1421; of hydrogenation of tetramethybutinediol (Zal'kind) 2067; of Ph_2CH dyes (Biddle) 2092; in viscous heterogeneous medium (Callow) 2177; of alcoholysis (Kolhatkar) 2762; approaching equil. (Trautz) 3008; of phototropic transformations (Padoa) 3066.

Reactivity, influence of NO_2 on, of substituents (Kenner) 605; influence of substitution on, of p-phenylenediamine (Morgan) 607; theory of (Baly) 1411; of halogens in org. compds. (Senter) 2764.

Reagents, Bettendorff's (Vanino) 38, 2287; Chemical—Their Purity and Tests (Merck, book) 265; for bile pigments in urine (Travaillé) 1342; $C(NO_3)_4$ as reagent for structure (Filipov) 1901; for analysis 2040; for photolysis by chlorophyll (Chodat) 2099; behavior of iodized starch toward Vanino's (Vanino) 2125; for gas analysis (Anderson) 2199; to remove rust (Friend) 2373; diphenylsemicarbazide as test for CO group (Toschi) 2388; alk. (Badische) P 2596; preservation of, used in Wassermann reaction (Weston) 2667; for detection and colorimetric estn. of Al (Atack) 3186; molten Zn as, for macroscopic etching of Fe and steel (Jones) 3207; see also *Chemicals*.

Rearrangements in arylamides of m-nitrobenzenesulfonic acid (Witt) 307; transformation of NH_4MeSO_4 etc. (Werner) 607; in phenylcyclohexane series (Le Bras dec) 614; in acetonaphthol group (Witt) 803; semidine, in the pyrazole series (Michaelis) 1029; the Beckmann (Kuhara) 1612; of triphenylmethane derivs. (Stieglitz) 2229; mol. transpositions in the α-glycols (Koopal) 2645; dynamics of isomeric change—keto-

Digitized by Google

and transformation of cyanoacetic acid and derivs. (Dawson) 2730; in glycol series (Neuberg) 3058; new kind of, in ketoximes (Leuchs) 3244.

Receivers, tar (Schüler) P 1388; for Zn furnaces (Meguin & Co.) P 1172 (Metallw. Unterweser, A.-G.) P 2505; for fractional distns. under diminished pressure (Bogert) 2725.

Receptors, tumor immunity (Morgenroth) 934.

Recorder, pyrometer 1409, 3146.

Recordin 954.

Rectification, by Si and Se (Vonwiller) 757.

Rectifiers, electrolytic (Schulze) 24, 1007 (Heinz) P 1434 (Mershom) P 1879; Hg arc (Weintraub) P 27 (Schulze) 414 (Anon.) 2190; cooling anode of (Brown, Boveri et Cie) P 1585; high voltage (Wolf) 562; high tension (Dushman) 1008; Al (Schulze) 2189; compn. for filling elec. (Fallek) P 3175; see also *Apparatus, distillation*, etc.

Recuperator for coke-ovens (Hughes) P 243; (Stein) 1838.

Red lead. See *Lead oxides.*

Red thorn (Marston) 692.

Reducing agents. See *Reduction.*

Reducing sugars. See *Sugars.*

Reductase, action of poison on—attempts to isolate (Harris) 809; reduction of hemoglobin by (Harris) 1489; influence of heat, light and Ra Em on (Harris) 2390; influence of narcotic poison on (Harris) 3253.

Reduction, theory of persulfate (Lüppo-Cramer) 30; cupric, of xylose and arabinose (Daish) 41; of cinnamaldehyde (Rona) 58; phytochem. (Neuberg) 58; and oxidation, simultaneous (Kötz) 207; catalytic (Brochet) P 355; test for tungstic acid (Torossian) 423; maintaining, conditions throughout pptn. of material contg. metal (Merrill) P 439; of Et hydrindene-2,2-dicarboxylate (Kenner) 461; of H_2SO_3 (Griesheim-Elek.) P 518; of aromatic ketones (Böeseken) 624; of NO compds. to NO compds. (Rinke) 625; of nitrobenzene (Marwedel) P 721; Unna methods for establishing reducing regions (Schneider) 1188; and activity of salvarsan serum (Stühmer) 1200; reducing power of natural water (Winkler) 1209; Ag (Lüppo-Cramer) 1282; of metal oxides by H (Kayser) P 1297; of ores (Timm) P 1298 (Trottier) P 1299; of hemoglobin by reductase (Harris) 1489; of Fe oxides by Pt (Sosman) 1580; electrolytic, of Cu (Addicks) P 1584; by acetic bacteria (Söhngen) 1628; of Fe solns. (Schumann) 1705 (Hoenig) 3187; of metals in crystd. form as microscopic mounts (Bowman) 1709; catalytic, of ethylenic compds. (Brochet) 1746; catalytic, of org. halogen compds. (Borsche) 1773; oxidation-, reactions (Dain) 1864; and alc. fermentation (Stange) 1928; by soaps (Schrauth) 2002; catalytic, of γ-pyrones (Borsche) 2093; biochem., processes in soil (Kühr) 2120; Cu_2O in alc. vapor (Wedderburn) 2204; formation of dialkyloxyanilines in reduction processes (Turner) 2223; electrolytic, of the quinoline alkaloids (Bredenberg) 2243; of $KMnO_4$ by $H_2C_2O_4$ (Boutaric) 2344; elec., of Zn ores (Johnson) P 2626; of unsatd. fatty acids and their glycerides (Puchs) P 2822; without addition of acid (Neidle) 2826; of P halides (Wolf) 2847; Ferromangan als Desoxydationsmittel im festen und flüssigen Zustand und das Ferromanganschmelzen (Rodenhauser, book) 2869; of cupric salts by sugars (Cramer) 2990; reducing power of photographic developers (Frary) 3035; photochem., of glycolaldehyde, etc. (Neuberg) 3058; with plant chromogens (Wolff) 3084; sulfide and sulfate S in, of roasted blende (Lindt) 3198; catalytic, of aldehydes and ketones (Skita) 3249; test for sugar in normal urine (Folin) 3264; by H_2O_2 (Fette) 3301; see also *Hydrogenation.*

Refining. See *Metallurgy; Electrometallurgy; Petroleum, refining;* and the individual metals.

Reflection, const. of quartz (Coblentz) 409; from painted surfaces (Bell) 969; reflective power of nonconducting solids and liquids (Rubens) 1577; of X-rays by crystals (Bragg) 1579; of X-rays (Bragg) 1581; chromatic (Merwin) 1888; infra-red, of aniline dyes (Johnson) 2031; detg. law of, of gas mols. (Wood) 2730; scattering and regular, of light by gas mols. (Burton) 3020.

Reflexes from intestinal mucosa to stomach (Brunemeier) 1803.

Refraction, atomic (Heydweiller) 16; Die Lichtbrechung in Gasen (Loria, book) 19; of Röntgen light on Pb edge (Laub) 174, 552; rotatory powers and—of cinchonicine and borneol (Peacock) 749; ideal, of gases (Jones) 881; of C_nH_2 compds. (Moureu) 1146; of optical glasses (Gifford) 2030; in tomatoes (Bigelow) 2405; capacity of Si in org. Si compds. (Bygden) 3014.

Refraction, double, of lipoids in urine (Secchi) 483; dispersion of elec. (Lyon) 2031; temp. and magnetic (Tieri) 2185.

Refractive index, change in, of ethereal oils by heat (Irk) 509; of crystals (Wright) 902; of liquid H and N (Augustin) 1873; of gases (Howell) 2621; of aq. humor after treatment with $CaCl_2$ (Tristaino) 2905; Neusal butyrometric method for (Reggiani) 2950; accuracy of lens and drop method of measuring (Nettleton) 3022; of nerve fluid (Babes) 3256.

Refractometer, in analysis of sugar factory products (Pellet) 532; for ind. uses (Ritzmann) 539; in judging sour milk (Gerö) 942; recovery of AmOH from, detns. (Kreis) 2949.

Refractometry, detn. of alc. and ext. in beer by Zeiss' immersion (Podlogar) 118 (Lehmann) 1090; const. temps. in (Pearce) 539; of $CaCl_2$ serum of milk (Ackermann) 1081, of nerve fluid (Babes) 3256; detn. of albumin;

Digitized by Google

globulin and nonproteins in blood serum (Tranter) 3284.

Refractory material for foundry (Kelley) 47, 2635; white goods (Bigot) 238; bauxite 238; silicized C-silfrax (Tone) 266; zirconia (Meyer) 362; from ZrO_2 and ThO_2 (Arnold) P 363; m. ps. of 519; thermal cond. of (Dudley) 892 (Goerens) 1234 (Dougill) 1982; for metallurgical ind. (Juretzka) 1379; fusing (Podszus) P 1280; (Mankau) P 1540; sp. heat of (Steger) 1675; definition and tests 1675; of Rocky Mt. region (Bailar) 2136; fire-resisting block (Turner Bros.) P 2445; thin plates of (Crefelder Modellfab., etc.) P 2579; for lime kilns and pulp driers of sugar factories (Richter) 3341; basic lining for lime- or cement-kilns (Newberry) P 3347; see also *Bricks; Furnace.*

Refractory period, temp. coeff. of, in nerve (Adrian) 634.

Refrigeration (Ewing) 128; heat insulation for (Thornton) 128; plant (Kähler) P 850; 1831; of refrigerator-cars, etc. (DeCew) P 1977; (Grindley) 2431.

Refrigerating machines, NH_3 (Smith Refr. Co.) P 850; absorption (Mehlhope) P 1138 (Reitz) (Altenkirch) P 1139; (Zoelly) P 1230; compression (Plank) P 1231; (Riedlager) (A.-G. Masch. Escher, etc.) P 2010; linings (Seaman) P 2300.

Refuse, disposal of creamery (Wilson) 679 (Crohurst) 2413; treating (Furse) P 680; prevention of odors at disposal works (Hering) 831; incinerator (Leask) (New Destructor Co.) P 1084 (McKay) 1212 (Woodman) 1523 (Hering) 1645; (Kibby) 1958 (Maffitt) 2413; N fertilizers from (Elschner) 1217, 2418; distn. of org. (Craney) P 1707; Disposal (Matthews, book) 1959; disposal, Los Angeles (Simons) 2412; utilization of leather (Micksch) 2606; destructors—by-products (Priestly) 2785; disposal in southern cities (Conant) 2786; rept. of comm. on collection and disposal of 3111; present state of, incineration (Steck) 3313; see also *Garbage; Sewage; Waste.*

Regenerators, filling for (Ludwig) 258; coal gas (Glover) P 858; of metallurgical furnaces (Slick) P 1027 (Danforth) P 1742; (Stein) 1838.

"Regenerite" for sizing (Keil) 2965; (Heuss) 3325.

Regnault-Pfaundler's formula (Svyentoslavskii) 2180.

Regulation, chem. heat, of animal (Mansfeld) 2935; of breathing in man (Douglas) 3282.

Regulators, voltage (Garrard) 25 (Anon.) 178 (Acker) 414 (Grau) 2331; for elec. furnaces (Anon.) 26 (McLain) 1272; Brown-Boveri voltage (Schmidt) 178, 562; pressure (Rogers) P 375 (Ingersoll-R.Co.) P 2333; (Blohm) P 2472; for position of electrodes in elec. furnaces (White) P 2625; see also *Thermoregulators.*

Reichert-Meissl number, of volatile fatty acids (Prescher) 389; effect of renovation of butter on (Tonney) 670.

Relativity theory (Budde) 17; (Hiecke) 17; (Einstein) 735; (Tolman) 1562; Die Relativitätstheorie der Physik (Vogt, book) 2836.

Remedies. See *Drugs.*

Rennet (Bokorny) 2907.

Rennin, Na citrate and curdling of milk by (Bosworth) 465; action on casein (Bosworth) 810, 2406; inhibition of coagulation by (Thaysen) 1790; abolishing parallelism between, and pepsin action—diff. sensitiveness of pepsin and, towards alkali (Hammarsten) 2904; pepsin-, question in ripening of cheese (Dam) 3306.

Repairing of app. (G. B. O.) 537.

Reproducibility of Cu electrode (Getman) 267.

Reproduction, reproductive organs and metabolism (Korentschewsky) 1192; in domestic fowl (Pearl) 1932; influence of mineral content of ration on (McCollum) 2663.

Research (Raymond) 1264; scientific organization (Hele-Shaw) 2970; relation to progress of mfg. inds. (Whitney) 2971; tech. school (Burnie) 2971; at Vienna Ra Inst. (Paneth) 3024.

Resene in rosin (Paul) 3135.

Reservoirs, concrete (Matthews) 239; measuring level of water in petroleum (Freund) 710; coppering 1520; stripping water works (Hazen) 1953 (Stearns) 2784.

Residual affinity. See *Affinity.*

Residual valence. See *Valence.*

Residues, sepg. furnace (Gründler) P 132; treating, of sugar manuf. (Venditi) P 2464.

Resiliency restoring, to rubber (Wright) P 163.

Resinates, photochem. properties of colored (Bancels) 1001.

Resin oil, pure (Melamid) P 1253, 1398.

Resinotannol (Zellner) 3083.

Resinous products, spirit-sol. synthetic 530; (Gen. Elec. Co.) P 973; "albertol" as substitute for mastic (Maue) 1662; (Badische) P 1849; plastic phenolic mixt. (Knight) P 2318; oil-sol. CH_2O (K. Albert) P 2320; sol., and their applicability (Kühl) 2987; see also *Phenol condensation products.*

Resins, thickness of very thin layers on surface of water (Marcelin) 8; sand-blasting (Raymond) P 388, 3135; guaiac, in scammony (E'We) 513; detg. in hops (Schmidt) 688 (Winge) 1657; extg. from wood (Koch) P 860 (Bashlin) P 1689; sepg. from wood and straw (Aflenzer, etc.) P 861 (Melhardt) P 1254; chlorinating (Buchner) P 1128; and vulcanizing properties of rubber (Stevens) 1134; granulating (Stevens) P 1245; purifying gutta or pontianak (Bradshaw) P 1406; Manual of Oils, and Paints (Ingle, book) 1151; partially neutralized soins. (Dieterich) 1662; soins. for surgical dressings (Dieterich)

Digitized by Google

1662; in Moroccan vase (Reutter) 1668; obtaining, in manuf. of paper pulp (Luttringer) 1690; titration of hop (Schmidt) 1823; mangostin, a substance allied to (Hill) 2061; of *Picea vulgaris* var. *montana* (Binder) 2081; size (Heuser) P 2590; ind. in Spain (Elorrieta) 2819; of capaiba as an antiseptic (Stockman) 2919; solvents (Hilwitz) 2988; rubber (Ellis) 2996; Le conifere da rimboschimento e l'industria resiniera (Cravire, book) 2988; soap (DeCew) P 3141; artificially hardened (Prager) 3369.

Resistance, Infection and (Zinsser, book) 328; of Materials (Slocum, book) 1098; to winter of winter wheat (Sinz) 1346; preserving, of bricks (La Soc. Utzschneider, etc.) 1676; mol., encountered by a plate moving in gas (Knutsen) 2023; of bacteria against antiformin (Spindler) 3269; see also *Electric resistance; Friction.*

Resistors. See *Electric resistors.*

Resolution of oxonium salt (Levy) 63; of phenylglyceric acid (Riiber) 2244; of metallic salts of amino acids, etc. (Barker) 2895; of β-nataloin and β-homonataloin (Léger) 2895; of tetrahydro - β - naphthaquinaldine (Gibson) 3224.

Resonance, theory of, radiations (Geitter) 17; elec. and opt. (Lindman) 263; of Na vapor (Strutt) 3163.

Resorcinol, reaction for (Tortl) 1367 (Silbermann) 2127; di-*p*-nitrobenzoate (Gray) 2895.

Resorcinolarsenic acid and derivs. (Bauer) 1778.

Resorcinolbenzein (v. Liebig) 85.

Resorcinol - *m* - nitrosalicylic acid (Purgotti) 70.

Resorption of Hg preps. (Döhring) 3295.

Respiration of castrated animals (Vita) 96; effect of strychnine, etc., on (Edsall) 336; pituitrin and (Nice) 478; Fe in, of sea urchin eggs (Warburg) 487; water content and temp. of expired air (Galeotti) 651; after nephrectomy (Fedeli) 652; coma in art. (Almeida) 652; phenylethylamine derivs. and (Bry) 658; of barley (Harman) 1088; app. for small animals (Benedict) 1340; of wheat buds (Kostychew) 1797; of sea algae (Pantanelli) 1798; diabetic respiratory quotient (Lusk) 1801; muscular work and respiratory quotient (Morgulis) 1930; O tension of respired air (Dallwig) 1932; variation in activity in relation to sunlight (Spoehr) 2260; of aquatic insects (Ege) 2404; intermediate products of alc. fermentation in O (Ivanov) 2548; effect of drugs on (Higgins) 2670, 3099; biochem. of (Vernon) 2767; oxidases in (Reed) 2767; physico-chem. regulation (Winterstein) 2936; respiratory dead space (Henderson) 2936 (Haldane) 2937; change in regulation of (Beckmann) 3280; alveolar air analyses—variations of efficiency of respiratory center (Straub) 3280; regulation in man (Douglas) 3282; in picrotoxin convulsions (Pollock) 3287; action of opium alkaloids on (Macht) 3298; see also *Gas exchange.*

Respiratory center, pharmacology of (Cushny) 1202; variations of efficiency of (Straub) 3280; see also *Nerves.*

Respiratory exchange of heart in diabetes (Starling) 1074; methods for detg. (Carpenter) 3077; Comparison of Methods for Detg., of Man (Carpenter, book) 3268; in fish (Gardner) 108, 825; see also *Gas exchange.*

Retardation, retarder for plaster (Strauss) P 1382; relation between photoelec., and gas pressure for ultramicroscopic metal particles (Meyer) 3020.

Retinitis albuminuric (Woods) 3287.

Retorts, tubes (Pictet) P 4; for gas or coke (Koppers) P 145; continuous vertical (Aarts) P 370; coking- (Lütz) P 370 (Cochrane) P 2144; for petroleum refining (Weiser) P 860; kiln for burning 958; for distg. coal (Hughes) P 962 (Heckert) (Clarke) P 2146; carbonization in vertical (Fulton) 1240; inclined (Richardson) 1386, 2143 (Huber) 1683; generating (Carpenter) P 1840; (Tozer) P 2448; charging vertical (Waddell) P 2448; gas and sewage distg. (Nübling) P 2727; see also *Furnace; Gas, illuminating and fuel (apparatus); Ovens; Coke ovens.*

Retting flax, hemp, etc. (Lombard) P 966 (Toles) P 1395 (Loomis) P 2596 (Durand) 2816 (Feuillette) P 2818 (Greaves) P 2986.

Rhamnose, action of $Zn(OH)_2$ and NH_4OH on (Windaus) 623; cyclohexylhydrazone (Kizhner) 2065.

Rhamnus, medicinal, barks (Gathercoal) 1531; *R. catharticus* (Oesch) 205; barks of *R. carniolica* (Tunmann) 2290.

Rheostat. See *Electric resistor.*

Rheumatism, action of salicylates in (Miller) 107.

Rhisopus, toxin of *R. nigricans* (Gortner) 337 (Blakeslee) 3086; (Hanzawa) 1795.

Rhodes grass (Lomanite) 943.

Rhodium spark spectrum (Kail) 2481.

Rhodusite (Murgoci) 2046.

Rhubarb, exam. of pulvis rhei compositus (Elsdon) 2691.

Rice, extn. of efficaceous constituents of (Mural) 469 (Kondo) 1072; disintegration by alkali (Warth) 489; assimilation of colloidal Fe by (Giles) 682; carbohydrate ration and polyneuritis in birds fed on polished (Braddon) 1192; org. phosphoric acid of (Thompson) 1354; detecting husks in fodder-meal (Coen) 2676; gases of swamp, soils (Harrison) 2960; products of hydrolysis of protein of, kernel (Osborne) 3073; use in bread-making (Novelli) 3307.

Rice polishings, chem. of (Fraser) 2389; treatment of human beriberi with (Williams) 2668; isolation of vitamine from (Eustis) 3073; phosphotungstic acid ppt. from (Drummond) 817.

Rice powder (LaWall) 2285.

Ricin during germination of castor-bean (Agul-

Digitized by Google

hon) 2265; hypersensibility to (Ahlaire) 2265; prep. (White) 1530.
Ricinic acid, detg., in oil prepp. (Ertian) 1253, 2820.
Ricinoleic acid, action of P_2O_5 and $ZnCl_2$ on glyceride of (Fokin) 1898.
Rickets (Rost) 2938; (Kranz) 3294.
Ricotta (Cingolani) 669.
Riebeckite (Schieri) 189.
Rinderpest, proteins of animals during (Hartley) 2266.
Ring formation and viscosity (Thole) 170; completed, systems and mol. vol. anomaly (Le Bas) 261; opening and closing (v. Auwers) 806; new N–O system (Stoermer) 1054; polymembered, in Cu salts of bisimino acids (Shlesinger) 2067; formation in spiranes (Leuchs) 3242.
Ring compounds. See *Cyclic compounds.*
Ringer solutions, internal liquids of animals kept in hypertonic (Brunacci) 1944; action of muscular tissue on amino acids circulating in (Lombroso) 2104; action of kidney on amino acids added in circulating (Arton) 3273; action of intestine on amino acids added in (Lombroso) 3274.
Rings, alloy for piston rod packing (Holder) P 781.
Ripening, after-, in potato tuber (Appleman) 476; changes in, coconut (Sloco) 1189; of Neufchatel cheese (Laxa) 1515; of grapes (Baragiola) 1655; of field and food crops (Petters) 3113; of cheese (Dam) 3306.
Rivaite (Zambonini) 774.
Roads, macadamized (Ges. für Teerverwertung) P 1105; binder for (Moore) 1381; sweepings as fertilizer 1525; tar macadam (Taylor) P 1680 (Parkinson) P 3347; materials for (Anon.) 1986 (Hart) P 3347; surfaces (Calantar) P 1987; concrete (Voshell) (Johnson) 2445; grouting for (Lovegrove) P 2975; tarring (Rosen) P 3347; see also *Paving.*
Roasting, cocoa or chocolate-pastes (Neumann) P 110; ores (Schlippenbach) P 195 (Kirsch) P 437 (Ramen) P 1026 (Timm) P 1298 (Carmichael) P 3217; oven (Ridge) P 594; sulfide ores (Gröndel) P 783 (Buddeus) P 1299; blende (Buddeus) P 908; blast (Keep) 1164; formation and decompn. of sulfates during (Dudley) 1293, 1593; cacao beans (Vignes) P 1356; equil. in system Pb–S–O, process (Reinders) 1564; sampler for use with, drums (Barth) P 2010; concentrator slimes tailings (Addicks) 2635; see also *Metallurgy; Ores, treatment of.*
Rockallite (Washington) 428.
Rock dust barriers against coal dust explosions (Rice) 1393.
Rocks, non-volcanic basic, of Madagascar (Lacroix) 46; ferrite halos around zircon in (Grengg) 188; radio-elements in (Weissenberger) 265; Deposits of the Useful, their Origin, Form and Content (Beyschlag, book) 284; nitric N in (Stewart) 347; radioactivity of (Mache) 411; silicified wood (Wetzel) 425; ore deposition in and near intrusive (Lawson) 426; dike, of Colo. (Cross) 427; CO_2 in (Borgström) 573; av. igneous (Mead) 581; Coeur D'Alene monzonite and other plutonic, of Idaho (Stewart) 582; petrography of, from Pölzen region, Bohemia (Scheumann) 582; at Neudorf, Gross Ullersdorf, Moravia (Kretschmer) 584; volcanic—andesite (Serra) 774; geology of alunite-pyrophyllite, of Kyuquat Sound, Vancouver Is. (Clapp) 1022; volcanic, of Sardinia (Serra) 1022; rock-dust sampler (Ruhl) 1137; of alkali series in Timor (Brouwer) 1448; diopside (Stiny) 1449; comp. of and decomp. products of bituminous (Fokin) 1541; oolitic texture in (Brown) 1592; of Monte Ferru (Washington) 1734; detn. of origin (Trueman) 1735; calcn. of $CaSiO_3$ in norm of igneous (Washington) 1890; Die Lagerstätten der nutzbaren Mineralien und Gesteine, nach Form, Inhalt und Entstehung dargestellt (Beyschlag, Krusch, Vogt, book) 1891; eruptive, of Terra del Fuoco (Millosevich) 2049; Pfahl of Bavarian Forest and associated (Ochotzky) 2049; (Daly) 2050; Permian eruptive (Kuselite) 2050; malchite and related dike- (Sandkühler) 2050; waterproofing (Abraham) P 2140; cement, contg. potash (Spencer) P 2445; analyses from lab. of U. S. Geol. Survey, 1880–1914 (Clarke) 2632; scapolite-bearing eruptives (Brauns) 2634; slide rule in computation of analyses (Hance) 2862; bekinkinite and associated (Tyrrell) 2863; from Terra del Fuoco (Millosevich) 2863; formations of central New York (Cogswell) 2864; coeffs. of expansion of (Schulz) 3045; classification of eruptive (Milch) 3046; detn. of d. of, at high temps. (Day) 3190; Victoria and Saanich map areas, Vancouver Island (Clapp) 3196; metamorphism of silicate (Rinne) 3196; new, from Bruck a/M. (Stiny) 3196; Die Gesteinbildenden Mineralien (Weinschenk, book) 3346.
Rock salt. See *Sodium chloride.*
Röntgen tubes, regulating vacuum in (Snook) P 27; (Hirsch) P 166; branching sparks on (Winawer) 552 (Thieme) 1718; (Siemens & Halske A.-G.) P 564; Coolidge (Bown) 1005; (Zehnder) 1005; (Lindemann) P 1280; cooling electrodes (Reininger, etc.) P 1877; emission and absorption of gas residues in (Cardani) 2188; (Zehnder) 2033; without rise of starting potential (Lilienfeld) 2735; ionizing potential of (Drew) 2836.
Rollers, compn. for printers' inking (Usher-Walker, Ltd.) P 3120.
Roller skate wheel (Clark) P 1103.
Rolling hot-, Fe or steel rods (Frasch) P 51; protecting Fe or steel during (Frasch) P 52; ingots (Alldedrice) P 288; pressure in cold, brass (Shepard) 1893.
Rolls, transferring pigment pictures on (Roiffs) P 2318.

Longalite, sulfones from (Binz) 2536.
Loofing (Howe) P 387 (White) P 1987; paper (Binder) P 855; felt 1381; fireproofing (Maschke) P 1837; oxidized coating of sheet Fe for (Matveev) 1894; (Traeber) P 2140; bituminous material for (Woodley) P 3347.
Roots, localization of Mn ions in, and formation of protein substances (D'Ippolito) 95; injury by disinfectants to, in sandy soils (Hartley) 1086; blight of sugar beets (Krüger) 1406; chemotropism in (Porodko) 1629; crops in Sweden (Söderbaum) 1817; exosmosis from, of anesthetized plants (Merrill) 2103; dissolving action of (Chirikov) 2120; illum. gas and (Harvey) 2395; exchange of ions between, of *Lupinus albus* and culture solns. (True) 2396; absorption of ions by (Johnson) 2662; distribution of geotropic sensitiveness in (Dewers) 2924; denitrification in agrarian soil and, -disease (Lumia) 2959; gases of swamp rice soils—their utilization for aeration of (Harrison) 2960.
Roscoelite (Wright) 41.
Rose, coloring matter of (Willstätter) 1302; anthocyanin in (Löwschin) 1798.
Rose oil (Siedler) 1970; (Schimmel & Co.) 2692.
Rosin, purifying (Bessent) P 146 (Yaryan) P 244; distg. (Mariner) P 147; extg. (Dormon) P 375; in 1914 860; in sulfite cellulose 964; detection of, sizing (Kollman) 965; specks on paper 1390; alc., solns. (Prager) 2000; production in Germany (Storandt) 2459; sizing (Schlick) 2708; nature of Am. (Paul) 2715; action of HNO_3 on (Paul) 3135; resene in (Paul) 3135.
Rosin acids, relation of, to rosin (Paul) 972.
Rosinates, metallic content (Radcliffe) 2987.
Rotation, crop, limestone in (Lipman) 1817.
Rotatory dispersion. See *Dispersion*.
Rotatory power. See *Optical rotation*.
Rubber, swelling of vulcanized (Kirchhof) 162; cultivation in Sumatra 163; hysteresis test for (Davies) 163; Hevea in Cochin China (Girard) 163; insol. constituent of (Schmitz) 163 (Bernstein) 1134; wild, plantation and synthetic (Waddell) 163; constitution (Harries) 253; transformation products of hydrohalide (Lichtenberg) 254; friction testing of, goods (Bierer) 256; Ceara, from Papua 394; Funtumia, from Gold Coast 394; Para, from Gold Coast 394; Para, from Sierra Leone 394; technics of production (Hoffman) 395; dyeing (Ditmar) 731; chemistry in 1913 (Ditmar) 871; smoke-curing, latex (Ripeau) 980; swelling of, in org. liquids (Spence) 980; belting 1134; influence of solvent on viscosity of solns. (Kirchhof) 1134; packing plantation (Schidrowitz) 1134; tapping interval (Bosanquet) 1135; standardization (Whitby) 1135; chem. in 1914 (Ditmar) 1556; treatment of latex and curing of (Rubber Growers Assoc.) 1556; Ind. (Torrey, Manders, book) 1556; diffusion of CO_2 through (Rodt) 1709; Castilloa 1858; coagulation by smoking 1858; elec. coagulation of latex 1858; from Dominica 1858; tapping of trees and storage of plant food (Campbell) 1858; Central, Station for German colonies (Frank) 1858; coconut water as coagulant (Leonard) 1858; valuation (van Resandt) 1858; testing insulating power 1859; disease in Malaya (Brooks) 1859; proteins in (Frank) 2003, 2163, 2822; HNO_3 as solvent for (Jones) 2004; variability of (Schidrowitz) 2004; depolymerization of raw (Rossem) 2005; Philippine (Barrett) 2006; in Cochin China (Cremazy) 2006; plantations of Angola (Geraldes) 2006; produced in Kelantan (Hutchings) 2006; wild and plantation-grown (Irving) 2006; chem. coagulation of, latex (Kaye) 2006; coagulation of latex (Barritt) 2006; latex production in Hevea (Lock) 2006; production (Lyne) 2006; tapping (Maclaren) 2006; wild and plantation Hevea (Ripeau) 2006; varieties of com. raw (Spence) 2006; cultivation in Central Africa (Wildman) 2006; plantation (Williams) 2007; impregnating balloon fabrics with (Barr) 2007; impregnation of cables (Anon.) 2007; carrying capacities of, insulated wires, etc. 2035; nature of latex and its treatment (Hübener) 2163; yield in Malay States (Dreier) 2326; recovery of solvents from machine processes in, ind. ing, reinforced with steel wool (Crane) 2823; seamless articles (Miller) 2823; and leather compns. (Cook) 3144; porous or spongy (Schidrowitz) 3378; thread (Bradley) 3379; vulcanizing, and simultaneously attaching it to glass, Fe, Sn, porcelain, etc. (Moench) 3379; vulcanized mixt. of, and hair (Pacchetti) 3379; coating and preserving (Smith) 3379; see also *Caoutchouc; Isoprene; Vulcanisation.*

Rubber, analysis. S in (Gaunt) 1258 (Tuttle) 1704; 1556; mechanical testing 1858; proteins in (Frank) 2003; testing mechanical goods (Douty) 2004; (Schidrowitz) 2004; estg. bitumens in (Porritt) 2004; detg. mineral matter in (Porritt) 2004; estg. mineral matters in vulcanized (Jones) 2004; evaluation (Schidrowitz) 2004; prep. of vulcanised, for (Wheatly) 2326; (Gottsch) 2327; estg. sulfide and sulfate S and action of solvents on vulcanized (Stevens) 2466; action of solvents on vulcanized (Stevens) 2466; testing 3144.

Rubber, artificial and substitutes (Waddell) 163; production (Halen) 395; (Badische) P 732; (Collardon) P 1135; present status of (Hinrichsen) 1259; (Badische) P 1408; treatment of (Badische) P 1408; (Stockhausen) P 1408, 2008; com. prep. of isoprene (Chardet) 2007; from oxidized oils (Chardet) 2007; hard, 2007; rev. of patents on (Kausch) 2326; (Barricelli) P 2328; (Garlepp) 2571; (Herbold) P 2823; from glycerol-gelatin (Stockhausen) P 1136; see also *Composition, plastic.*

Rubber, regenerated (Capel) P 396; (Kugler) P 731; (Xylos Rubber Co.) P 732; from the tetrabromide (Kirchhof) 871; (Gare) P 1407; washing and masticating (Wardrop) P 1556; contg. cellulose (Wheeler) P 1556; effect of acids and alkalies on (Martin) 2004; (Gare) P 2824; (O'Neill) P 3144.

Rubber compounds, temp. and tensile properties of (Wormeley) 2005; balata in 2007.

Rubbelite (Wittich) 43.

Rubbing, fastness of dyes to (Fort) 2594.

Rubidium, potential of, electrode (Lewis) 2615.

Rubidium bromide, compd. with sarcosine (Pfeiffer) 2653.

Rubidium carbonate, dissociation of $RbHCO_3$ (Caven) 986.

Rubidium dioxalodiaquochromiate (Werner) 35.

Rubidium dioxalohydroxoaquochromiate (Werner) 36.

Rubner test (Rogerson) 3078.

Rugs, dressing wool and hair (Brumwell) 3377.

Rum of Martinique (Zizine) 117; (Jonscher) 1365; ferments of (Kayser) 1658, 3222; manuf. (Kayser) 3322.

Rumpfite (Redlich) 1447; analysis of (Tschermok) 1447; -schist (Michel) 1449.

Russo test (Kahn) 3079.

Rusting. See *Corrosion.*

Rusts, bacterial, of flaxseed for detg. fiber and waste of flax stems (Domracheva) 1693.

Ruthenium, wave-number system (Paulson) 2030; spark spectrum (Kail) 2481.

Ruthenium salts, complex Cl (Gutbier) 2196.

Ruthenium tetrahydroxide, colloidal (Kalle & Co.) P 1378.

Rutile deposits (Watson) 427.

Rye, detection of additions of, to wheat flour (Fanto) 109; losses of nutritive substances in, -distillery materials (Völtz) 2687.

Sabulite 152.

Saccharides. See *Monosaccharides; Polysaccharides.*

Saccharification, of starch (Boulard) P 1223 (Kunz) 3375; of amylaceous material (Molhant) P 1365.

Saccharimeters, calibration of (Sidersky) 975; in beer analysis (Rossi) 2562.

Saccharin, test for (Tarugi) 826; detg., and Na salt (Pazienti) 939; toxicity of (Verschaffelt) 1071.

Saccharose. See *Sucrose.*

Sacks, impregnating compns. for (Mason) P 1672.

Safes, metal plates for (Bauer) P 1170.

Safety, Modern Factory (Price, book) 515; device for cupola furnaces (A.-G. Waagner, etc.) P 1172.

Safety lamp (Faerber) P 5 (Kraushaar) P 2314; (Rebitzki) 2593; (Anon.) 2009.

Safety matches. See *Matches.*

Saffron, Evaluation of (Fromme) 507; exam. of (Nestler) 939.

Saggars (Guy) 1835.

Sagnac effect and ether—and emission theory (Witte) 17.

Sagrotan (Anon.) 953; (Messerschmidt) 1343.

Saké, lactic and succinic acids in (Ando) 1088.

Salad oil (McGill) 226.

Salicin (Sharp) 2691.

Salicol (Mannich) 1660.

Salicornia, effect of salt on growth of (Halket) 1797.

Salicylaldehyde, effect on plants (Skinner) 115; xylylhydrazone, etc. (Padoa) 1319; field tests with (Schreiner) 1653; in soil (Skinner) 1961; methylsemicarbazide (Becker) 2384; 4,4'-diphenylsemicarbazone (Toschi) 2388.

Salicylamide ethylene ether (Jacobs) 2077.

Salicylamine (Gabriel) 2876.

Salicylates, sp. action in rheumatism (Miller) 107; assay of tablets contg. (Jones) 509; and uric acid concn. of blood (Fine) 2402

Salicylic acid, oil of birch and Me ester of (Watson) 512; and excretion of uric acid (Frank) 660; manuf. 691; tetrapyridine oxydititaniumhexasalicylate (Hauser) 1180; reaction (Self) 1667 (Torti) 2126; basic salicylates and Cu salt (de Coninck) 2058, 3221. Pb and Cu salts (de Coninck) 2227; basic mercuric salt (Lajoux) 2527; derivs. (Bayer & Co.) P 2569; 3-methyl-4-chlorophenyl ester (von Walther) 2643; bisanisylidenedimethyl-

pyrone salt (Boon) 2893; geneserine salt (Polonovski) 3222; see also *Salol; Sodium salicylate.*

Salicylic compounds, history of (Sharp) 2691.

Salicylsulfonic acid, basic Pb salt (de Coninck) 2058.

Salicyluric acid, detg. (Baldoni) 214.

Saliforminum (Os) 123; (Keulemans) 952.

Salinometer (Coplans) 1341.

Salite (Beutell) 188.

Saliva, ptyalin in (Purjess) 99; detecting I in (Schumacher) 1923; neutralizing power (Marshall) 1938; compn. of, and salivary reflexes (Lubimov) 2934; influence of ext. of posterior lobe of hypophysis on secretion of (Solem) 3088; chemistry and physiology of (Kirk) 3282.

Salivary gland, metabolism of (Wolf) 1074.

Salol, assay of tablets contg. (Jones) 509; manuf., 691; -phenol prophylaxis of tetanus (Arnd) 825; use with liquid paraffin (Goldby) 1666; estg. (Emery) 2565; new (von Walther) 2643; -coating of pills (Peacock) 2969.

Salt, $[Fe(CN)_5C_8H_8O_2]Cu_2$ (Cambi) 452; $[Fe(CN)_5C_8H_7O_2N]Na_2$ (Cambi) 452; $C_{15}H_{21}O_4N.HCl$ (Windaus) 1482.

Salt deposits, of Searle's Lake, Cal. (Dolbear) 515; origin of, in La. and East Texas (Norton) 580; in southeastern California (Gale) 903; removing, on heating surfaces of cellulose digesters (Morterud) P 1246; deep-sea (Joly) 1449; compn. of Stassfurt (Rózsa) 1449; geology of Alpine (Gillitzer) 2048; analysis of mother liquors of mine of Comacchio (Asquini) 2294; origin of thick (Branson) 2366.

Salting out, of amino acids (Pfeiffer) 2533.

Saltpeter. See *Potassium nitrate.*

Saltpeter, Chile. See *Sodium nitrate.*

Saltpeter, Norway. See *Calcium nitrate.*

Salts, cond. of, vapors (Kalandyk) 11; effect of hydrated, on absorption of light by water (Schaeffer) 13; increase of sensitiveness of chromated pigment papers by (Eder) 31; effect on sensitiveness of dichromated glue (Valenta) 31; action between clay filters and, solns. (Hicks) 38; purifying solns. of metal, contg. colloidal silicic acid (Stuckle) P 130; contg. 2 solvents of crystn. (Marsh) 171; polarization and spectrum burners with salt spray (Beckmann) 173; decarburization of steels in, baths (Portevin) 193; metabolism of tubercle bacilli in media with inorg., as sources of N (Kendall) 215; residual affinity in inner complex (Ley) 315; inner complex— in hydroxyamidoximes, etc. (Ley) 315; antagonism between acids and (Osterhout) 327; effect of inorg., on bacteria (Tully) 342; measuring high temps. by melting (Nehls) 397; colored by cathode rays (Goldstein) 410 (Baly) 1271; coloration of, by Becquerel rays, etc. (St. Meyer) 411; constitution of inorg. (Schaefer) 416; relation between, in sea-water (Manuelli) 428; transpiration stream and absorption of (Hasselbring) 475; paralysis of peripheral nerves by (Hacker) 484; compressed cakes (Lichtenberger) P 517; extg. mineral, from marine plants (Gloess) P 518; Well Boring for Brine (Isler, book) 523; reactions of ions and mols. of (Schroder) 544 (Robertson) 2018 (Marshall) 3155; addition of amines to metal (Peters) 569; myothermic expts. in, solns. in muscular contraction (Weizsacker) 633; water distribution and edema after feeding (Tachau) 646; reversibility of geotropism of *Arenicola* larvae by (Kanda) 664; electrolyzing (Soc. anon. Bale) P 761 (James) P 2741; acceleration of AgBr reduction by neutral (Lüppo-Cramer) 762; antagonistic action of (Loeb) 810; upset of fluid and salt balance in obesity (Düring) 821; medicinal table (Howe) 847; system acetone–salt–water (Leaming) 899 (Jacobs) 1563; morphotropic relations between, of trivalent metals and those of Sc, In and Be (Jaeger) 990; light absorption by inner complex (Ley) 1055; condition of, in milk (Van Slyke) 1068; reactions of, in boiling water (Petit) 1082; of complex acids of F (Gebr. Siemens & Cie) P 1102; comp. of muds from Columbus Marsh, Nevada (Hicks) 1163; influence on heliotropism (Marcolongo) 1347; changes in salinity and their effect on regeneration of *Cassiopea zamachana* (Goldfarb) 1350; action of, of heavy metals on Mg org. compds. (Konduirov) 1473; internal friction of, solns. (Herz) 1569; formation of aromatic hydrocarbons by electrolysis of, of aromatic carboxylic acids (Schall) 1583; acid, of dibasic acids (Jungfleisch) 1601; quaternary, of $(CH_2)_6N_4$ (Jacobs) 1610; chemotropic influence of, on radicles of *Lupinus albus* (Porodko) 1629; sifter and comminutor (Akt.-Ges. Chem. Prod. Fabr.) P 1708; in Cheshire (Calvert, book) 1736; relation of acidity of *Sphagnum* to mineral (Skene) 1797; effect on soil moisture (Karraker) 1815; in raw sugar fermentation (Nagel) 1824; monovarient systems of hydrolyzable (Shpital'skii) 1864; saline springs of Manitoba (Cole) 1891; influence on activity of malt amylase (Sherman) 1921; yeast production from sugar and mineral (Marbach) 1967; utilization of mother liquors of brines (Coppadoro) 1977; melting and treating (Intern. Salt Co.) P 1979; depositing, from their solns. (Breithaupt) P 1981, 2439 (Metals-Extn. Corp.) P 2133 (Sauerbrey) P 2433; solubility of electrolytes in solns. of (Szyszkowski) 2015; f. ps. and b. ps. of aq. solns. of (Sluiter) 2020; formation of hard— secondary transformation of Zechstein (Rózsa) 2045; effect on reaction velocity of Ph_2CH dyes (Biddle) 2092; quaternary (Weinhagen) 2230; chromoisomeric (Hantzsch) 2243; effect on solubility of $CaCO_3$ and $MgCO_3$ (Gothe) 2275; preventing scum on boiling, solns. (Leistico) P 2298; action on metals (Hale) 2371; corrosion of Fe in

Digitized by Google

aq. solns. of inorg. (Friend) 2373; and osmotic pressure of body fluids of *Fundulus* (Loeb) 2390; 3-salt nutrient soln. for plants (Sive) 2396; sepn. of amino acids with aid of neutral (Pfeiffer) 2533; in U. S. (Turrentine) 2571; optical rotatory power of derivs. of succinic acid in aq. solns. of inorg. (Clough) 2622; neutral salt compds. of amino acids and polypeptides (Pfeiffer) 2652; from Somaliland, 2750; saline diuresis (Yagi) 2779; mineral, from seaweed (Gloess) P 2801; elec. cond. of mixts. of fused (Sandonnini) 2834; behavior of CO_2 in pure aq. and saline solns. (Wilke) 2843; behavior of H_2O_2 with (Kazanetzkii) 2843; resolving metallic, of amino acids, etc. (Barker) 2895; and diuretin hyperglucemias (Hirsch) 2941; antagonism between ions in absorption of, by plants (Stiles) 2961; cond. of mixts. of solid (Sandonnini) 3009; variation of catalytic power of saline and colloidal solns. with conc. (Giurgea) 3015; equil. in salt perfusing solns. (Burridge) 3101; salt soln. method for testing centrifugal pumps (Moses) 3110; influence of neutral, on tendering of cotton with acids (Fort) 3131; dissoc. of water in solns. of (Palmaer) 3154; mol. state of, in soln. (Turner) 3154; H- and hydroxyl-ion activities of solns. of HCl, NaOH and KOH in presence of neutral (Harned) 3156; and borax (Vanino) 3186; transformation of Al silicates under influence of solns. of (Schneiderhöhn) 3192; of oceanic deposits (D'Ans) 3196; metamorphism of (Rinne) 3196; Weber's law and antagonistic salt action (Loeb) 3252; in clinical conditions (Dunn) 3290; see also *Double salts; Neutral salt action; Solutions.*

Salvarsan, glycerol-guaiacol soln. of (Galvagni) 123; fixation of As by brain after injection of (McIntosh) 484; and hog cholera (Baum) 485; excretion of As in urine after injection of (Irokawa) 486; therapy of syphilis of nervous system (Iwaschenzoff) 658; influence of oxidation and reduction on activity of, serum (Stühmer) 1200; administration (Narbona) 1927; demonstration in forensic cases (Müller) 2780; urobilin in stool in pernicious anemia as influenced by (Robertson) 2929; effect of irritation on permeability of meninges for (Stillmann) 2941; a dye (Schumacher) 3253; death after (Fischer) 3295; see also *Neosalvarsan.*

Salvarsan-copper, 954; in trypanosomiasis (Seidelin) 1510.

"Salvarsan-sodium" (Wechselmann) 1664; (Fabry) 2552.

Salves, Der praktische Schmiermittel-Fabrikant (Krauss, book) 125; (Bückel) P 2427, 2428; (Walther) P 2428.

Salsfisch (Buttenberg) 2949.

Samarium ethyl sulfate, morphotropic relation to Et sulfates of other rare elements (Jaeger) 990.

Sampler, for mill pulps (Kimore) 166; for liquids (Schmitz) 166 (Acker) P 2011; (Haas) P 874; rock-dust (Ruhl) 1137; for gases (Hays) P 1862; for use with roasting drums (Barth) P 2010; siphons on soln., 2053; for waste water (Graswinckel) 2470; mechanical ore (Taylor) 2471; portable air (Brown) 3111.

Sampling, sewage (Kershaw) 112 (Meade) 1211 (Wisner) 1211; Co ores (Smoot) 186; low-grade ore deposits (Jennings) 186; ore reserves in Transvaal Au fields (Förster) 579; liquids, 2361; plant at Hamburg, Germany, 2471; error in alluvial (Haley) 2494; in colliery work (Gregory) 2703; churn-drill prospect reserves in Transvaal Au fields (Förster) 579; liquids, 2361; plant at Hamburg, Germany, 2471; error in alluvial (Haley) 2494; in colliery work (Gregory) 2703; churn-drill prospect holes (Moses) 2856; and Chem. Analysis of Fe and Steel (Bauer, Deiss, book) 3190.

Samsonite, morphology of (Slavik) 575.

Sand, molding (Schmid) 430; $KMnO_4$ as cyanicide in, -filling solns. (Cooper) 586; drying and heating (Coleman) P 704, 1988; blast for finishing paper (Weyl) P 714; cleaning filter (Thompson) 830; working lime (Siedentopf) P 1105; river, as filter medium (Fritze) 1358; binder for, -clay roads (Moore) 1381; bituminous, of Alberta (Ells) 1688; blast for marking glassware (Spitzer) 1705; testing (Van de Greyn) (Chapman) 1986; sepg., from slimes (Marmor-, etc.) P 2119; mineralogical analysis (Tomlinson) 2203; oil, gas and water in Dakota (Huntley) 2367; black, of Madagascar (Duparc) 2497; removing coloring materials from (Rhodin) P 2579; monazite in (Artini) 2860; standard specifications for Mn bronze ingots for, castings, 3201; welding (Karr) 3213; functions of, binders (Lane) 3213; Albany molding (Newland) 3213; mechan. grading of concrete (Dieckmann) 3345; washing (Rikof) P 3348.

Sandalwood oil, in perfumery (Mann) 844; solubility in alc. (Baring) (Italie) 952.

Sand-lime bricks. See *Bricks.*

Sandstone, white soils in variegated, regions (Falckenstein) 115; Pampas formation (Walther) 904; petrographic evidence on origin of Catahoula, of Texas (Goldman) 1022; pyritic concretions in Karroo (Young) 1159; origin of, ore-deposits (Kennan) 2497

Sanidine, from Albanian Mts. (Rosati) 773.

Sanitation, Inspectors Handbook (Taylor, book) 114; of military camps (Dunworth) 229; Foods and (Forster, Weigley, book) 338; Air, Water and Food from, Standpoint (Woodman, Norton, book) 497; Modern Factory (Price, book) 515; rept. of Am. Public Health Assoc. (Kershaw) 1211; removal of dead animals in cities (Bostwick) 1213; at Iquitos, Peru (Converse) 1213; of Fort Worth, Texas (Hering) 1213; of Hamburg Am. Line (Endris) 1958; Précis d'hygiène (Courmont, Lesiem, Rochaix, book) 1959; gas incineration and (Lisman) 1990,

Digitized by Google

of schools (Clark) 2413; regenerating air (Dräger) P 2414; stream (Phelps) 2414; Springfield, Ill. (Schneider) 2414; of Vera Cruz (Bowles) 2683; air cleanliness (Whipple) 2787; swimming pool (Manheimer) 2958.

Santal oil, com. (Beckers) 2794.

Santalol, α- and β- (Paolini) 1324.

Santogen, feeding value (Street) 124.

Santolina chamaecyparissus (Francesconi) 620.

α-Santolinenone and deriva. (Francesconi) 1040, 2235.

α-Santolinenononenitrilimine (Francesconi) 2236.

Santonin, -free flores cinae (Os) 123.

Santonin series (Wedekind) 78, 2249.

Santononic acid, oxidation of δ-hydroxysantonin to (Wedekind) 2249.

Saponification, in manuf. of curd soaps (F. G.) 728; of nitriles and ethers by conc. H_2SO_4 (Bougault) 1048; of fats (Andrault) P 1402; velocity of, of linalyl, terpenyl and geranyl acetates (Barillet) 1421; rate of, of BzOEt derivs. (McCombie) 1466; of esters with Mg and MgI_2 etherate (Zal'kind) 1748; of white pigment paints, 1848; of dicarboxylic esters (Wegscheider) 2881; of esters by alkalies (Wegscheider) 3007; catalytic action of alkaloids on (Traube) 3252.

Saponification number, effect of renovation of butter on (Tonney) 670.

Saponifiers, "Kontakt" and "Pfeilring" (König) 2461.

Saponin of *Styrax japonica* (Yashina) 511; action on disinfectants (Totky) 923.

Sapphires (Wittich) 43.

Saps, removing from wood (Toepfer) P 141; d. of cell, in desert plants (Cannon) 925; studies (Chandler) 1345; physico-chem. properties of (Harris) 1930; deodorizing vegetable (Ciusa) P 2805.

Sarcoma, serum diagnosis of Rous chicken (Funk) 1936; As compds. and Rous chicken (Funk) 2109; complement-fixation in chicken (Bailey) 2938; see also *Cancer; Carcinoma; Tumors.*

Sarcosine and -HCl (Baumann) 2644; hydrobromides (Pfeiffer) 2653; neutral salt compds. of (Pfeiffer) 2653.

Sardines, in olive oil (Blanc) 1949.

"Satinising," cotton fabrics (Dutschke) P 1251.

Saturation, of water with volatile oils (Nunez) P 693; measuring vapor pressure lowering by air, method (Washburn) 1143; of liquids with gases (Bcutel) P 1708 (Ross) P 2010; of oils or fats with gases (Charlton) P 1853; in petrography (Shand) 2049, 2862 (Scott) 2049; of liquid with CO_2 (Pindstofte) P 2333; rate of, and purity and filterability of beet juice (Stanĕk) 2462.

Sausage, exam. of (Schenk) 1949.

Sausage casing (Cohoe) 227, P 3358; (Samuel) P 673, 2409.

Sawdust, stock food from (Walker) P 1813; building block of (Ujhazy) P 1987.

Scale, exponential temp. (Weber) 2181.

Scale, boiler, removing (Oliveras) P 358 (Jones) P 831 (Greenhorne) P 345, 1524 (Jayme) P 1814 (Riens) P 2415 (Becker) 2557; prevention (Oliveras) P 358 (Miksch) 677 (Jones) 831 (Harris) P 1360 (Oelwerke-, etc.) P 2415 (Kersken) P 1814 (Becker) P 2557 (Jones) 2680; see also *Water, purification of.*

Scandium, wave frequency in, spectrum (Paulson) 1426; sepn. from other rare earths (Speter) P 2299.

Scandium salts, morphotropic relations between, and those of In and Be (Jaeger) 990.

Scapolite, deposits (Borgström) 189; -bearing eruptives (Brauns) 2634.

Scapolite group, CO_2 in minerals of (Borgström) 189.

Scarlet fever, p-$Me_2NC_6H_4CHO$ reaction in (Rachmilewitsch) 1804.

Scheelite, detg. P in (Hagmaier) 39; rare earths in (Rohden) 43; cathodic phosphorescence of (Rohden) 2482.

Scherungulu tubers, essential oil of, 1659.

Schiff's bases (Rossi) 794.

Schists, working (Waddell) P 709; bituminous, of Sicily (Ponte) 1291 (Pulle) 2309; quartzite- and rumpfite- (Michel) 1449; pegmatite (Emerson) 2634; cryst. (Meunier) 2863 (Millosevich) 2863.

Schreiner finish, engraving steel rolls for (Laing) 3131.

Schroeder paradox (Wolff) 1423.

Schumann rays, effect on protoplasm (Bovie) 1790.

Schuman region, extension of spectrum beyond (Lyman) 2482; see also *Spectrum.*

Science, Lavoisier and Berzelius in (Guareschi) 2169.

Scientists, Mathematics for (Saltpeter, book) 886.

Scission. See *Cleavage.*

Scleroscope (Shore) P 258, 3146.

Scobitost 955.

Scolopsite (Thugutt) 578.

Scopolamine (Wainwright) 844; stable solns. (Straub) P 847; stability (Lenger) 1367; curarizing action of (Obré) 2552; color reaction for (Wasicky) 3190.

Scouring, wool (Chambers) P 3133.

Scouring lands (Gimingham) 2788.

Scrapers, for salt-cake furnaces (Farbw.) P 358.

Screening, conc. by 1024.

Screens, colored, for motion pictures (Wohl) P 416; photographic (Böhm) P 764 (Rheinberg) P 2841; for half-tones (Millergraph Co.) P 1283; polychrome (Petzold) P 1284; Röntgen (Veifa-Werke, etc.) P 1876 (Bucky) P 2727, 2736; in Cincinnati filter (Ellms) 1954; for removing macroörganisms from water (Thomas) 2956; see also *Photography; Photography, color; Separators; Sewage.*

Digitized by Google

Scrophulariness, glucosides of (Bourquelot) 1923.
Scum, preventing, on b. salt solns. (Leistico) P 2298.
Scutellarein and tetraacetyl deriv. (Bargellini) 2237–8.
Sealing, bomb tubes (Kleinmann) P 983; metal to glass (Sand) P 1103.
Seals, Pb, for leading-in wires (Sand) 1861; for gas containers (Maschinenfab. Augsburg-, etc.) P 2168.
Searlesite (Larsen) 43.
Sea water. See *Waters, natural.*
Seaweed, utilizing (Norsk Tangsyndikat) P 361, 1134; leaching (Norsk Tangsyndikat) P 2296; I, mineral salts, mucilage and cellulose from (Gloess) P 2801; as fodder (Beckman) 3309.
Secale cornutum, cornutine in (Wastenson) 1828.
Secretin, and sugar assimilation (Loeb) 650; action on secretion of milk (Maxwell) 3282.
Secretion, Internal, and Ductless Glands (Vincent, book) 92; $NaHCO_3$ and pancreatic (Wilbrand) 223; of bile (Pitini) 224; effect of quaternary NH_4 bases (Launoy) 657; org. substances and, of diastase by fungi (Chapman) 923; influence of vagus on pancreatic (Von Anrep) 1073; pancreatic (Einhorn) 2670, 3098; internal, in relation to development and condition of teeth (Gies) 3282; see also *Lactation; Pancreatic Juice*, etc.; also the various glands, organs, etc.
Secretions, internal, and purine metabolism (Fleischmann) 95; internal, and hormonic equil. (Garrison) 1500; pituitary (Cow) 2932; chemotactic action of (Dold) 3288; see also *Milk*, etc.
Secretogen 1973.
Sector, rotating, in photographic photometer (Weber) 2349.
Sedative, phenoval (Salomon) 2793; calmonal (Feilitsch) 2793; diogenal (Streblow) 3326.
Sedimentation, test for water, etc. (Weston) (Whipple) 340; equil. in Se and Au hydrosols (Westgren) 737; impurities from oil (Morris) P 982; cyanide slimes (Trent) P 1171; for paper waste (Mann) P 1246; machine (Erfurth) P 1708, 2168; tank (Allen) P 2376.
Sediments, argillaceous (Linck) 775; lipoid substances in urine (Reinike) 819; at Sulphur Springs, Ark. (Siebenthal) 1021; smelting storage-battery (Smith) 2210.
Seeding, in gels (Liesegang) 2171.
Seeds, biol. reactions of proteoses of (Wells) 332, 2400; prepg. oil, for pressing (Schneider) P 390; influence of CO_2 on (Kidd) 473; action of Th on (Castillo) 502; dehiscenious (Phohl) 507; urease in Indian (Annett) 641; oleaginous (Bolton) 727; treating (deWolf) P 839, 950; Mn in coat of (McHargue) 925; oil (Wagner) 974; injury by disinfectants to, in sandy soils (Hartley) 1086; absorption of liquids in, of *Lupinus albus* (Traverso) 1189; fibers from (Segundo) P 1251; enzymic peptolysis in germinating (Court) 1345; expressing oils from (Schueler) P 1707; fat content of *Canarium polyphyllum* (Wagner) 1811; food from (Vartanian) P 2784; Philippine oil-bearing (Brill) 3140; treating grain, to facilitate its sprouting and growth (Fry) P 3321; see also *Germination.*
Selachii, fats in liver (Paladino) 1808.
Selenic acid, prep. (Meyer) 2744; soly. of Pd in (Hradecky) 3183.
Selenides, alk. earth (Kittlemann) 2185; m. and b. ps. of, minerals (Borgström) 2364.
Selenium, Wein Se cell, 268; colloidal solns. of, in glycerol and erythritol (Veimarn) 546; diffusion, pptn. velocity and sedimentation equil. of particles in, hydrosols (Westgren) 737; rectifying property in (Voneviller) 757; in electrotechnics (Meissner) 891; photoelec. phenomenon (Del Regno) 1000; light sensibility (Elliott) (Sieg) 1002; production (Hess) 1008; colloidal (Gutbier) 1142; elec., photoelec. and electromechanical properties of (Brown) 1424; cells (Ancel) 1427; crystal forms of (Brown) 1427, 1586; influence of annealing on characteristics of light-sensitive (Dieterich) 1427; wave-length sensibilities of—light action in, cells (Sieg) 1428; in Na Ca silicate glasses (Fenaroli) 1539; dye (Fraenkel) P 1847; recovery of resistance of, following illumination (Brown) 2027; light action in (Brown) 2185; change in heat cond. of, crystal with change in illumination (Sieg) 2732; toning bath (Chem. Fab. E. Schering) P 2842; in measurement of energy of X-rays (Voltz) 3027.
Selenium, analysis, detecting traces (Denigès) 1287; analytical reactions of Se compds. (Denigès) 1287; (Gutbier) 1727; in org. compds. (Bauer) 2205 (Michaelis) 2494; (Browning) 3041.
Selenium bromide, action on Mg alkyls (Pieroni) 1039.
Selenium compounds, aromatic (Lesser) 80 (Pyman) 2889; action of pyridine on org. (Raffo) 1473; (Oefele) 3333; org. (Riedel A.-G.) P 514.
Selenium dioxide (Treadwell) P 1101.
Selenium halides, action of Mg org. compds. on (Strecker) 1179.
Selenoacetaldehyde (Vanino) 1609.
Selenoaldehydes (Vanino) 1609.
Selenobenzaldehyde (Vanino) 1609.
***o*-Selenocyanobenzoic acid** and derivs. (Lesser) 80.
Selenofluoresceins (Jäger) P 1098.
Selenoformaldehyde (Vanino) 1609.
Selenonaphthenequinone (Schoeller, book) 1919.
Selenoxanthone (Lesser) 80, 81.
Selenoxanthonecarboxylic acid and derivs. (Lesser) 80, 81.

Semicarbazides, syntheses of substituted (Bougault) 2058.

Semicarbazinodiacetic esters, nitroso derivs. of (Bailey) 1332.

Semicarbazones and HCl (Wilson) 604.

Semidine rearrangement. See *Rearrangements.*

Semioxalyldihydrocarvylamine (Harries) 2879.

Semiquinoid salts (Kehrmann) 1334–5.

Senility, chem.-colloidal mechanism of (Marinesco) 3075.

Sensitiveness, of chromated pigment papers (Eder) P 31; of dichromated glue (Valenta) 31; light, of ferric salts (Winther) 748; light, of Se and stibnite (Elliott) 1002; extension toward ultraviolet wave length, curves for Se (Sieg) 1002; drugs and human sensory threshold (Martin) 1203; photochem. (Volmer) 1709; of crystal detectors (Giurgea) 3000; wave length curves of K photo-elec. cells (Ives) 16.

Sensitization, passive, with antisera (Friedberger) 101; tuberculin (Klopstock) 652; of porphyrins (Hausmann) 656; of phot. paper (Rubricius) P 763; bacteriolytic (Porcelli-Titone) 1507; by protein cleavage products (Hailer) 2400; see also *Photography.*

Sensitometry of phot. papers (Nutting) 762.

Separation of metallic sulfides (Lavers) P 53; of furnace residues (Gründler) P 132; of Solids (Hinchley, book) 357; of liquids from suspended matter (Möller) P 415, 2193 (Berghauer) P 1101; of hot and compressed gas mixts. (Ephraim) P 317; magnetic, of Li spectrum (Kent) 551; of Ag_2CrO_4 in gelatin (Liesegang) 632; of materials of diff. d. (Intern. Haloid Co.) P 699; of smoke from gases (Burnside) P 956; electromagnetic minerals (Tolentino) 1164; of comminuted or powdered fuel (Coyle) P 1242; solids from gases (Cottrell) (Strong) (Bradley) (Nesbit) 1273 (Heine geb. Nácke) P 1377; of white metal and gunmetal borings (Walton) 1450, 3199; of constituents of gaseous mixts. (Mazza) P 1671 (Wussow) P 2436; of ores from gang (Bacon) P 1743; of ores (Elektro-Osmose) P 1896; of vapor mixts. (Behrens) P 1980; of salts from soins. (Breithaupt) P 1981, 2439; of gas-vapor mixts. (Behrens) P 2441; of amino acids (Pfeiffer) 2533; of constituents of coal tar (Davies) P 2585; of dihydroxybenzenes (Gray) 2895; of mixt. of liquids contg. nitroglycerin and an acid (Weyel) P 3130.

Separator, sepg. smoke from warm gases from boilers (Garbarini) 533; portable magnetic, 3146. *Patents:* Solids from gases (Playter) 4 (Schmidt) 1137 (Collins) 2612 (Möller) 2333; magnetic (Krupp A.-G.) 4, 1138, 2168 (Jorke) 1138 (Mag.-Werk) 1708; ore- (Vautin) 52 (McGovern) 1600 (Bell) 1455 (Salwen) 1895; turpentine or rosin from dross (Bessent) 146; screens for paper pulp (Terrian) 149; suspended solids from smoke, etc. (Strong) 179; gas (Smiths Pat. V. M. Co.) 259 (Soc. l'air liquide) 3125; shaking-device for electromagnetic (Masch.-Ans. Humboldt) 260, 1139; electrostatic (Kraus) 260, 874, 1138 (Bibolini) 2332; for solids and liquids from gases (Reichling) 540, 1139; for metallurgical slimes (Hardinge) 593; for liquids (Lorenzen) 1263 (Theisen) 2168 (Meyer) 2333; flotation (Callow) 591 (McDonald) 1297 (Rork) 1455; for solids from liquids (Holstein) 734 (Dorr) 1862 (Hofer) 2331; electromagnetic (Jobke) 982; prepg. storage battery (Skinner) 1011; for removing clay from phosphate rock (Hoover) 1087; for sepg. constituents of emulsions (Meyn) 1134; for sepg. dust from air (Viola) 1138; screens for ores (Kidney) 1170; for minerals (Blackhurst) 1171; oil from condensed water (Rensink) 1389; for sepg. ore from water (Dorr) 1455; for sepg. coal from slate (Ayres) 1685; for gases and liquids (Buhring) (Graefe) 1707 (Timm) 2168; for pulps (Dorr) 1742 (Haskell) 2504; (Riboni) 2011; tar (Berlin-Anhal., etc.) 2146, 2449; for O and N of air (Place) 2331; for combustibles, etc. (Kraus) 2333; screens for granulated substances (Drakes, Ltd.) 2472; for sepg. stones from clay, loam, etc. (Müllenbach) 2472; for suspended particles from gases (Möller) 2489; liquids from mixts. (Kubierschky) 2726; for rare earths (Clément) 2743; for purifying naphtha and gasoline (Cronenberger) 2814; for sugar saps (Turka) 2822; for solids (Hardinge) 3147; see also *Classifiers; Centrifuge.*

Septen 954.

Serine, AcH from (Neuberg) 58.

Serology, Immunology and (Kolmer, book) 104.

Serotherapy, auto-, of diseases of skin (Hilario) 654; auto- (Palmer) 2549.

Serpentines (Beutell) 188; of Vermont (Wigglesworth) 3046.

Serum. See *Blood serum; Milk serum.*

Sesame, effect of previous crop of, on cabbage (Skinner) 683; test for presence of, in olive oil (Sage) 1697.

Sesquiterpenes, new class (Semmler) 83; in Japanese calamus oil (Asahina) 1091; (Deussen) 208.

Setting. See *Cement, hydraulic.*

Settling. See *Sedimentation.*

Sewage, sampling (Kershaw) 112 (Wisner) 1211, 1645; disposal at Leeds, 113; treatment at Mt. Kisco, 113; electrolytic, treatment (Connolly) (Landreth) 113 (Rasser) 1957 (Schmeckenberg) 2411; economics of, filters (Fuller) 113; Brooklyn, expt. plant (Hammond) 113; Mt. Gretna, Pa., plant (Matthes) 113; Cleveland's testing station (Pratt) 113, 1522; Milwaukee, problem (Hatton) 113, 1645; pollution of great lakes system

Sewerage, House Drainage, Sewerage and Sewage Disposal in Relation to Health (Parkes, book) 1083; Ontario, legislation (Dallyn) 1520; Am., Practice (Metcalf, Eddy, book) 1523; inquiry blank of Kgl. Landesanstalt für Wasserhyg. regarding, 2682; rept. of comm. on, 3111.

Sewer pipe, manuf. (Vogt) 1679; clearing (McNabb) P 2279.

Sewers, inflammable wastes in (Sprague) 343; air (Clark) 679; attacking capacity of waste waters on cement (Barth) 1083; detecting gasoline in (Little) 1522; maintenance of (Stevenson) 1522; quantity of gasoline necessary to produce explosive mixts. in (Burrell) 2815.

Sex, specificity of Abderhalden protective enzymes (Wegener) 98.

Sexual glands, correlation of, with other organs of internal secretion (Urstein) 99.

Shade, and transpiration and assimilation of tobacco plant in Cuba (Hasselbring) 1629.

Shafting, alloy for (Churchward) P 438.

Shaking, effect on serum (Schmidt) 1186; influence of, on complement and hemolytic amboceptors (Scaffidi) 1805.

Shaking device, for separators (Masch.-Ans. Humboldt) P 260; for mechanical analysis of soils (Ward) 498.

Shale oil. See *Petroleum.*

Shales, distg. (Scott) P 144; bituminous (Speiser) 774; carboniferous plant tissue (Barbour) 904; org. matter in oil- (Robertson) 904; bituminous, of Colo. (DeBeque) 1689; deposits of Western Provinces (Keele) (Ries) 1835; Scottish oil (Berg) 1735; deposits of Quebec (Keele) 2442; black, in the making (Twenhofel) (Schuchert) 2753.

Sheep, variations in resistance of red cells in (Ottenberg) 3289.

Sheffield Scientific School, Studies from Chem. Lab. of (Wells, book) 1147.

Shell, imitation tortoise (Tatham) P 1555; working up tortoise (Pufahl) 2971; compn. of brachipod (Clarke) 2863; detection in cocoa (Wasicky) 2948.

Shellac, detg. moisture in (Langmuir) 2317; for use in making printers' overlays (Cook) P 2459; for use in raised printing (Lipsius) P 2459.

Shellfish, from sewage polluted waters 1358.

Shells. See *Projectiles.*

Sherardizing. See *Galvanising.*

Shingles (Ayers) P 1105.

Shipment. See *Transportation.*

Ships, coverings for steel plates for, decks, etc. (Porter) P 131; paint for bottoms of (Comstock) P 725 (Paternò) P 1552; coating, bottoms (Holzapfel) P 1253; sewage disinfection for (Frank) 1521; cyanide fumigation of (Roberts) 1523; anti-fouling coating (Cuneo) P 2318.

Shock, intravenous use of colloidal solns. in (Hogan) 1203; simple and repeated tests (Nusbaumer) 1741.

Shoes, filler for bottoms (Thoma) P 129, 130, 253, 393, 1374, 1703 (Woodward) P 394, 1554, 1555 (Snell) P 2995; defects in vulcanization of rubber, 2327.

Shoots, distribution of geotropic sensitiveness in (Dewers) 2924.

Shortening, dry-, flour (Estabrook) P 110, 227.

Shorts (McGill) 2676.

Shot-marks, analysis (Lochte) 2770.

Shrinkage, of concrete (McMillan) 1985; preventing in wool (Garrett) P 2455; effect on stresses and deflections of reinforced-concrete beams (McMillan) 3345; Schwellung und Schwindung von Zement und Zementmoerteln in Wasser und Luft (Gary, book) 3346.

Siccatives. See *Driers; Desiccator.*

Siccocitin, 954.

Siderite, handling the roast from, furnaces (Weber) P 1745.

Siderurgy. See *Iron, metallurgy of.*

Sieglingia (Alsberg) 2773.

Sieve, drum (Fahrendeller, etc.) P 1388; standardization of cement (Wig) 1680; for clay (Cammiss) P 136; (Akt.-Ges. der Chem. Prod.-Fabr.) P 1708; (Mayn) P 1708; for granulated substances (Drakes, Ltd.) P 2472.

Sifting, Solids (Hinchley, book) 357.

Signalling system, battery–bell (Wheeler) 2190.
Silage, prep. of (Gorini) 1081 (Samarani) 1642.
Silfrax, silicized C-silfrax (Tone) 266.
Silica, glass (Sand) P 137; system: CaO–Al_2O_3–(Rankin) 702; (Marcus) P 1102; detg., in water (Winkler) 1357; fused, dishes for concg. H_2SO_4 (Marshall) 1372; system: anorthite–forsterite– (Andersen) 1446; as constituent of plant food (Lundie) 1494; system CaO–Al_2O_3–SiO_2 (Jänecke) 1540; removing, from aluminate solns. (Howard) P 1671; in agate porphyries (Liesegang) 1731; heat transmission capacity of, dish (Lewis) 1869; thermal expansion of fused (Harlow) 2023; working up CaO and MgO Cu ores rich in (Binder) 2053; sepg. metals from, of ore slimes (Littleford) P 2218; colloidal from slimes (Fleissner) P 2377; brick for by-product coke ovens (Seaver) 2805; constitution (Martin) 2848; as plant food (Lundie) 2922; Bibliography of Fused (Marshall, Winship, book) 2974; see also *Quartz glass.*
Silicates, constitution of natural (Clarke) 42; as source of CaO and MgO for plants (MacIntire) 116; gels formed by decompn. of (Thiele) 895; crystn.-differentiation in, liquids (Bowen) 902; breaking down, of K and Al (Peacock) P 1010; mol. state of, fusions (Boeke) 1141; solubilizing alkali in natural double (Leeden) P 1376; double (Permutit Akt.-Ges.) P 1836; Die Characterisierung des Bodens nach der molekularen Zusammensetzung des durch Salzsäure zersetzlichen silikatischen Anteiles (Gans, book) 1963; detg. Fe in (Barnebey) 1728, 2362; extn. of Ni from, ores (Sulman) 2055; heating method in investigating binary eutectic mixts. contg. (Bezborod'ko) 2179; crystd. hydrous (Beutell) 2496; detn. of alumina in (Selch) 3188; metamorphism of (Rinne) 3196.
Silicic acid, purifying solns. of metal salts contg. colloidal (Stuckle) P 130; gels (Thiele) 895; sol. (Schwerin) P 1154 (Electro-Osmose-A.-G.) P 2490; base-exchanging products contg. (Permutit-A.-G.) P 1235; action of humus-, on vegetation (Haselhoff) 1963; in milk sterilized in glass (Pfyl) 2405; soln. of, of low mol. wt. (Electro-Osmose) P 2696; c. P. (Elektro-Osmose) P 2797; optical properties of colloidal (Rinne) 2857; in human pancreas (Schulz) 2936; as filler in fuses (Arsem) P 3176.
Silicic anhydride. See *Silica.*
Silicon, -C contact (Hartsough) 177; Hall effect in (Buckley) 752; rectifying property in (Vonwiller) 757; casting Si (Carborundum Co.) P 783; behavior of V toward (Giebelhausen) 2216; refraction and dispersion capacity of, in org. compds. (Bygden) 3014; Ueber die thermoelektrischen Eigenschaften des Silicums (Baerwind, book) 1874.
Silicon alloys, treating, contg. Fe, Al and Mn to reduce elec. and magnetic loss (Hadfield) P 437; casting (Carborundum Co.) P 783; high-Si steel (Smith) P 1170; (Charpy) 2757; annealing Si sheet steel (Ruder) P 3215; Si steel sheets (Graef) P 3217; see also *Ferrosilicon.*
Silicon aluminium nitride (Peacock) P 696.
Silicon calcium nitride (Peacock) P 696.
Silicon carbide, silicized C-silfrax (Tone) 266; for producing NH_3 (Peacock) P 1010.
Silicon carbonitride (Peacock) P 1010.
Silicon chlorides, prep.—action of EtOH on Si_2Cl_6 (Martin) 1017, 3181; action of MeOH and EtOH on Si_2Cl_6 (Martin) 1468; prep. (Kipping) 1586.
Silicon compounds (Martin) 1468, 2888; heterocyclic org. (Bygdén) 2648; refraction and dispersion capacity of Si in org. (Bygden) 3014; org. (Mead) 1907.
Silicon dioxide. See *Silica.*
Silicon hydroxide, adsorptive power of (Rohland) 546.
Siliconic acids (Meads) 1907.
Silicon oxycarbide, "Fibrox" (Weintraub) 1276.
Silicon potassium nitride (Peacock) P 696.
Silico-oxalic acids (Martin) 1468; constitution (Martin) 2848; action of alkalies and water on (Martin) 2888.
Silico-tungstic acid, method for estn. of alkaloids (Ferencz) 122.
"Silit" (L. B.) 892; (Gebr. Siemens & Co.) P 2192.
Silk, debasting (Ris) P 385; fast, dyeings (Krais) 527; comp. of (Pigorini) 528; hygroscopicity of (Levi) 719; strengthening, fibers (Schwandt) P 724; spinning (Herzog) 1250; dyes and decompn. of (Heermann) 1394; inspection of raw (Homolka) 1549; reeling of Tussar, 2711; rendered suitable for felting (Diesser) P 3133; action of Na_2SO_4 on (Bland) 3365; making feltable (Diesser) P 3366; see also *Weighting.*
Silk, artificial, recovery of solvents used in mfg. (Barthélemy) 245; from viscose soln. (Dietler) P 383; finishing (Schneider) 720; ind. in 1913–14 (Süvern) 720; recovering formic esters used in manuf. of (Duclaux) P 861; (Mewes) P 865; spinning (Denis) P 865; (Legrand) P 1123; (Petit) P 1251; status of ind. during war (V. E.) 1395; ornamenting (Linfoot) P 1694; (Bardelli) P 2316; reaction of, made from cellulose (Matos) 2595; (Loewe) P 2818; (Berl) P 3359.
Sillimanite, art. (Eitel) 426.
Silo, sudden death in (Hayhurst) 225; preservation (Hunt) 1987.
Siloxicon (Peacock) P 1278.
Silt, agricultural value (Müntz) 1961.
Silundum (Tucker) 2350.
Silver, Bi-, thermopiles (Coblentz) 1; weighing minute spheres of (Blair) 39; enrichment (Palmer) 44; colloidal soln. of (Crookes) P 129; bivalent (Scagliarini) 182; cleaning

S. during 1913 1163; silvering Al, Fe and steel (Bévenot) P 1280; reduction in photography (Lüppo-Cramer) 1282; complications at anode in, coulometer (Richards) 1431; distribution and fate of colloidal, in animal body (Voigt) 1512; clouds in AgCl and AgBr (Lorenz) 1565; colloidal (Bastin) 1568; in Pb ores of East Alpine Triassic limestone (Canaval) 1732; Ni_4As_3 and bornite as, precipitants (Palmer) 1888; in galena ores (Nissen) 2047; behavior of V toward (Giebelhausen) 2216; polish (Poulton) P 2432; new cryst. variety (Choudhri) 2627; anodic potentials of (Reedy) 2838, 3041; ultramicroscopic particles (Gans) 3002; m. p. (Kaye) 3161; action of hauerite on (Quercigh) 3191; action of H_2O on (Isnardi) 3211.

Silver, analysis in cyanide solns. (Bahney) 770 (Roodhouse) 2043; volumetric (Debrun) 1442; in ores and concentrates contg. Pt and Pd (Smoot) 1442; detg. in colloidal, preps. (Danckwortt) 1660 (Korndoerfer) 508; cyanide method (Rebière) 3042.

Silver, metallurgy of, elec. chlorination of ores (Caldwell) P 29; in 1914 284; (Baur) P 289; (Phillips) P 781; preventing fumes in smelting sulfide ores (Baggaley) P 1455; (Clevenger) P 2055; smelting methods at Magistral, Mex. (Bissell) 2211; sulfide ores (Langguth) P 2219; $Pb(OAc)_2$ vs. PbO in (Morris) 2502; recovery from waste (Marsh) 2502; treatment of furnace fume by Cottrell process (Aldrich) 2839; Pb acetate and Zn salts in (Morris) 2865; refining cyanide ppts. (Durant) 3047; Ag from cyanide solns. (Towne) P 3215; see also *Cyanide process.*

Silver alloys, with Zn and Pb (Bogitch) 432; elec. cond. of (Petrenko) 777; hardness of system Ag–Zn and Ag–Cl (Petrenko) 777; pressure and elec. cond. of Al- (Beckman) 779; Ni–Cu–Au–Ag (Parravano) 1024; for electroplating solns. (Gleason) P 1170; f. p. of, with As (Heike) 2374; soly. of H in Pd and (Sieverts) 3006.

Silver ammonoacetate and diammonate (Franklin) 1016, 3037.

Silver ammonobensenesulfonate and its mono- and diammonates (Franklin) 1016, 3037.

Silver azide, photographic action (Bekk) 416.

Silver bromide, acceleration of reduction (Lüppo-Cramer) 762; compressibility of (Richards) 983; Ag clouds in (Lorenz) 1565; green toning on, paper (Namias) 2039; effect of light on (Lorenz) 2490; Ueber einige neue Isocyanine und deren Einwirkung auf Bromsilbergelatine (Bing, book) 2841.

Silver chlorate, rotatory power of mixed crystals of $NaClO_3$ and (Perucca) 407.

Silver chloride, soly. of (Glowczynski) 741; Ag clouds in (Lorenz) 1565; effect of light on (Lorenz) 2490.

Silver chromate, pptn. in gelatin (Liesegang) 632.

Silver cyanide, single potentials in, plating bath (Frary) 3172.

Silver dioxaloacetatoaquochromiate (Werner) 37.

Silver dioxalodiacetatochromiate (Werner) 37.

Silver dioxalodiaquochromiate (Werner) 35.

Silver dioxalodihydroxochromiate (Werner) 36.

Silver dioxalоethylenediaminechromiate (Werner) 35.

Silver dioxalohydroxoaquochromiate (Werner) 36.

Silver disalicylatodiamminechromiate (Barberi) 2849.

Silver fluoride (Guntz) 1880.

Silver halides, progression and regression in, films (Volmer) 415.

Silvering, mirrors (Lenk) 695; Dewar flasks (Wolschek) P 734; quartz fibers (Williams) 749.

Silver iodide, phot. development with (Lüppo-Cramer) 273; properties of, and thermodynamic conceptions (Jones) 1268.

Silver molybdic acid phosphates (Rosenheim) 3039.

Silver nickelomolybdate (Barbieri) 897.

Silver nitrate in therapy (Lublinski) 105; solvent properties of (Lowry) 559; double compd. of creatinine with (Smorodintzev) 3088; formula for ammoniacal (Richard) 3329.

Silver nitrite, soly. and degree of dissociation in satd. soln. (Creighton) 2827.

Silver ores, Pb-Ag mines of Gilmore, Idaho (Nichols) 579.

Silver oxides, soly. in water (Rebiere) 3158.

Silver phenylammonoacetate and its monoammonate (Franklin) 1016, 3037.

Silver preparations, evaluation of org. (Lehmann) 2125.

Silver proteate, in therapy (Lublinski) 105.

Silver salts, anodic oxidation of NH_3 in alk. media in presence of (Scagliarini) 33; (Scagliarini) 182; sensibility to light (Guareschi) 399; soly. of (Thiel) (Hill) 994; acceleration of reduction of, by acids (Lüppo-Cramer) 1722; conc. cells built up from ammoniacal

Digitized by Google

solns. of (Reychler) 2733; "double complexes" in ionization of (Blomberg) 3153.

Singeing, tendering of cloth during (Thomson) 3132.

Sintering ores (Schlippenbach) P 195 (Krom) P 591 (Timm) P 1298 (Plock) P 1743 (Bartsch) P 2505; oxide ores and foundry products (Bartsch) P 292; temp. (Ormandy) 700; flue dust (Downs) P 781 (Anon.) 2636; (Polysius, etc.) P 1100.

Siphon (Bradbury) 1; (Rebenstorff) 1; for H_2SO_4 (Nagelschmidt) P 1231; acid (Szigeti) 1557; on soln. samplers, 2053.

Sirups, detg. citric acid in fruit (Kunz) 687; from fruit juice (Gore) P 1952; high % sugar (Giess) P 2464; Michael Servetus' book on (Cremston) 2553; fermentation of table (Owen) 2720; detn. of added sugar in jams contg. starch (Jungius) 3304; purity of, adhering to raw sugar (Koydl) 3375; from sugar beets (Gore) P 3376; see also *Glucose; Sugar, analysis.*

Six hundred and six (606). See *Salvarsan.*

Sizing, paper (Wagg) P 149 (Anon.) 245, 713, 1390 (Schacht) P 2312 (Altmann) P 2591 (Cyster) 2708; for walls (Porter) P 158; in paper machine (Fues) 964; detection of rosin and animal (Kollman) 965; ledger stock (Maddox) 1113; app. (Pyrah) P 1252; wood (Perkins Co.) P 2435; resin (Heuser) P 2590 (De Cew) P 3141; rosin (Schlick) 2708; with "Regenerite" (Keil) 2965 (Heuss) 3325.

Skin, action of aminoazobenzene compds. on (Martinotti) 224; effect of substances inhibiting tumor growth on regeneration of (Leighton) 483; fatty acid and cholesterol of (Weill) 648; black pigment in (Young) 649; absorption of water through, of frog (McClendon) 1488; wheat flour as application (Unna) 1971; physiol. climatology (Osborne) 2398; cutaneous reaction (Dominicis) 3089; serum-, test in diagnosis of pathol. conditions (Bronfenbrenner) 3292; see also *Hides.*

Skin diseases, autoserotherapy of (Hilario) 654.

Skin effect, in bimetallic wires (Miller) 1879; in conductors (Kennelly) 2624.

Slag cement. See *Cement, hydraulic.*

Slags, heat in (Johnson) 47; availability of H_3PO_4 in basic (Jones) 232 (Williams) 3319; blast furnace, in concrete (Anon.) 239 (Aiken) 1680; detn. of Mn in 278; detg. citric acid sol. H_3PO_4 in basic (Hausding) 347; influence on muffles in Zn furnaces (Proske) 429; constitution (Osann) 430; m. out slag notch 431; solubility of H_3PO_4, in basic steel (Jung) 501; basic phosphatic (Demolon) 684; occluded scoria in steel (Giolitti) 589; solubility of constituents of basic (Sirot) 684; action of fluorspar on (Hamilton) 777; enclosures in steel (Giolitti) 905; utilizing (Rohland) 959; detg. P in 1019; detg. Fe in basic Bessemer (Blum) 1157; occluded in steel (Giolitti) 1168; blast-furnace (Passow) 1986; gas generators producing fluid (Voigt) 1990; inter-relationships between constituents of basic (Collins) 2121; bricks from 2136; contg. Mn cloud (Lorenz) 2474; blast furnace handling system (Prentiss) 2636; high-lime, in smelting of Pb ores (Bretherton) 2865; detn. of P_2O_5 in basic (Patten) 3318; liquid, produced in gas generators (Gwosdz) 3350. *Patents:* Granulating (Donaldson) 51 (Walter) 1028 (Hochofen-, etc.) 2420 (Lessing) 2580; castings from blast furnace (Risch) 53; generating steam by heat of (Smoot) 259; treating (Sutcliffe) 291; removing from gas generators (Gas Gen., etc.) 859 (Stettiner Charmotte Fab., etc.) 1841; tiles, paving-slabs from (Chiapponi) 1103; container for (Wärme-Verwertungs-G.) 1263; mechanism for removing, from open-hearth furnace (Kosinski) 1297; briquets of Thomas (Crusius) 1298; phosphate (Deutsch-Luxemburgische, etc.) P 1299; utilizing, from steel manuf. (Dahl) 1299; rich in sol. phosphates (Vögler) 1599; solubility of phosphate (Küppers) 1744; utilizing hot (Williams) 1814; converting, into porous lumps (Schol) 1837; making more viscous (Schol) 1837; increasing citric acid solubility of phosphatic (Act.-Ges. Peiner, etc.) 1964; extg. metals from (Vadner) 2219; Pb (Doanides) 2222; utilizing heat of cooling (Wärme-Verwertungs-G.) 1601, 2056; see also *Fertilizers.*

Slaking. See *Hydration.*

Slate in U. S. (Dale) 45; artificial (Macdonald) P 854; sepg. coal from (Ayres) P 1685.

Slaughter house (Rohland) (Stein) 2118; Utilisation des débris des animaux et déchets de la boucherie (Lesé, book) 2990.

Sleep, action of chloral hydrate and urethan (Morita) 1511; variations of efficiency of respiratory center in (Straub) 3280.

Slide rule for pulp measurement (Barth) 2503.

Slimes, detg. Prussian blue in cyanide (Anderson) 423; removal from waste water at blast furnace plants (Opderbeck) 2681; cyanide process—sepn. of metal-bearing soln. from, residue (Mills) 2867; agitation and soln. replacement (Carpenter) 2869. *Patents:* Dehydration (Hencke) 133 (Techen) 874; filtering ore (Salisbury) 195 (Lass) 2220 (Holderman) 2376 (Kelly) 3216; heating or distg. (Wolters) 398; filtering cyanide solns. from ore (Trent) 592; separator for metallurgical (Hardinge) 593; settling, decanting and dissolving cyanide (Trent) 1171; gasifying (Nübling) 1243; tank for treating (Dreves) 1263; sepg. sand from (Marmor, etc.) 2119; utilizing brown coal filter (Maschinenbau, etc.) 2146; obtaining metals from ore (Littleford) 2218; utilizing (Fleissner) 2377; dressing ore (Freimuth) 2378; dehydrating sea (Meyer) 2472; handling and mixing (Polysius) 2506; working (Jüngst) 2506; pressure carbonization of (Ges. für Indus triellen) 3355.

and phenol (Weinland) 319; H potentials of mixts. of HOAc and (Walpole) 999.

Sodium alloys, amalgams (Vanstone) 409 (Zappi) 3039.

Sodium aluminate (Spence) P 698; solns. of (Spence) P 3335.

Sodium arsenates (Fuller) P 563; assay of (François) 1974; system: $Pb(NO_3)_2$–H_2O–Na_2HAsO_4 (Curry) 2196.

Sodium arsenites, action on nitrosomethylurethan (Gutmann) 1053; effects on soil (McGeorge) 2684.

Sodium bicarbonate. See *Sodium carbonates.*

Sodium bisulfate. See *Sodium sulfates.*

Sodium bisulfite. See *Sodium sulfites.*

Sodium borates, acid (Ponomareff) 1435.

Sodium boroformate, action on urine (Köthner) 635; and pathogenic bacteria (Köthner) 2919.

Sodium bromide, and convulsions (Yanushke) 658; cond. and ionization in abs. EtOH (Robertson) 2018.

Sodium carbonates, $NaHCO_3$ and pancreas (Willbrand) 223; pptn. of amino acids with (Neuberg) 470; crystals (Spazier) P 516, 1673; $NaHCO_3$ edema in diabetics (Labbé) 652 (Levison) 825; mol. wt. of Na_2CO_3 (Richards) 734; $NaHCO_3$ (White) P 849; (Spazier) P 849; influence of $NaHCO_3$ on excretion of NaCl and intravenously injected lactose (Goldberg) 1203; action of phenolph. on $NaHCO_3$ (Mallat) 1368; chemist and soda ind. (Hazard) 1372; recovering from waste liquors from sulfate pulp (Moore) P 1691; formation in nature (Lucas) 1732; detecting $NaHCO_3$ in Na_2CO_3 (Haslam) 1886; (Hirt) P 1977; soda-KCN method for detg. As (Klason) 2493; continuous causticizing (R. W. S.) 2697; hydrolysis in soln. (Frary) 2827; electrolytic dissociation of $NaHCO_3$ (d'Agostino) 3062; influence on glucosuria, hyperglucemia and respiratory metabolism of depancreatized dogs (Kramer) 3091; see also *Ammonia-soda process.*

Sodium carbonitride (Peacock) P 1279.

Sodium chlorate, rotatory power of mixed crystals of $AgClO_3$ and (Perucca) 407; soln. of crystals of (Poppe) 744.

Sodium chloride, hemolysis by hypotonic, solns. (May) 91; elimination in perspiration (Viale) 97; effect of subconjunctival injections of, on ocular tension (Verderame) 107; system: KNO_3–NaCl–H_2O (Leather) 181; systems formed by $SrCl_2$, $BaCl_2$ and NaCl or KCl (Vortisch) 182; compressibility of (Essex) 261; effect of injection into intestine (Sato) 337; mixt. with H_3PO_4 for cooking (Berry) P 339; mining (Bradley) P 358; converting rock salt into table salt (Damman) P 362; stimulation of skeletal muscles by weak, solns. (Benda) 478; production in 1913 (Phalen) 515; soln. in urea solns. (Schnorr) 574; and growth of corn (Caldwell) 685; evapg. brine and graining and purifying salt (Frasch) P 697 (Wood) P 2800; soln. of crystals of (Poppe) 744; medicinal table salt (Howe) P 847; (Intern. Salt Co.) P 849; deformation of rock-salt crystal (Terada) 876; system: (Ba–K–Na)Cl (Jänecke) 895 (Vortisch) 896; solubility of curd in, soln. (Orla-Jensen) 918; in Manitoba (MacLean) 1022; $NaHCO_3$ and excretion of (Goldberg) 1203; solubilities of mixts. of KCl and, in HCl (Hicks) 1268; as fertilizer (Gonehalli) 1362; salt-conc. and hemolysis (Topley) 1502; as poison for stock (Guthrie) 1510; fertilizing value of (Söderbaum) 1525; as medicine (Berger) 1531; fine crystals (Bergen) P 1535; evaporator (Stubbs) P 1536; salt in blocks, cubes, etc. (Malcolm) P 1536; in coke ovens (Broadhead) 1543; effect on growth of *Salicornia* (Halket) 1797; influence on respiratory metabolism (Raeder) 1807; moisture-proof table salt (Miller) P 1813; products from (Pietrusky) 1831; effects on perfused heart (Burridge) 1933; in plasma—(McLean) 1939; (Weil) P 1978; potential of Ag against Ag ion in conc. solns. of (Forbes) 2026; exam. of dairy salt (Wolff) 2116; fertilizing sugar beets with (Stutzer) (Schneidewind) 2122; purifying rock salt (Bayer & Co.) P 2438; cell for electrolyzing (Nelson) P 2625; ground rock salt (Damman) P 2802; and germination (Micheels) 2922; detn. in feeding stuffs (Filippo) 2951; vasomotor center —effects of intravenous infusion of normal saline soln. (Pilcher) 3088; sepg. from $NaNO_3$ (Gibbs & Co.) P 3119; m. p. (Kaye) 3161; elec. resistance of soln. (Pieri) 3191; action of steam on (English) 3181; detn. in bread (Zylstra) 3304; see also *Ringer solution; Salt deposits; Electrolysis, industrial.*

Sodium citrate, and curdling of milk by rennin (Bosworth) 465; in transfusion of blood (Weil) 825.

Sodium citrovanadate (Barbieri) 3038.

Sodium columbates (Smith) 2357.

Sodium compounds, with pyridine and picoline (Emmert) 85; velocity of combination of Na derivs. of phenols with olefin oxides (Boyd) 198; thermal analysis of mixts. of alkali hydroxides with corresponding halides (Scarpa) 2828.

Sodium cyanide (Freeman) P 2296.

Sodium dioxaloacetatoaquochromiate (Werner) 37.

Sodium dioxalodiacetatochromiate (Werner) 37.

Sodium dioxalodiaquochromiate (Werner) 35.

Sodium dioxalohydroxoaquochromiate (Werner) 36.

Sodium disalicylatodiamminechromiate (Barbieri) 2849.

Sodium ethylate, ionization and cond. in abs. EtOH (Robertson) 2018; reactions with 1,2-dinitro-, 1,2,4-dinitrochloro- and 1,2,4-dinitrobromobenzene (Acree) 2343; reactions

with MeI (Robertson) 2343; reaction with EtBr and EtI (Marshall) 3155.

Sodium ethyl thiosulfate, action of alkali sulfide on (Gutmann) 2744.

Sodium fluoride, poisoning (Stanton) 1943; (Ullmann) P 2578.

Sodium formate, reduction of $HgCl_2$ by (Linhart) 567.

Sodium glycerophosphate, milk powder (Dunham) P 829; influence on N metabolism (Montuschi) 3296.

Sodium hydraside, electrolysis of, in anhydrous N_2H_4 (Welsh) 1015.

Sodium hydrosulfite, anhydrous (Specketer) P 3333.

Sodium hydroxide, mercerization and recovery of (Zänker) 528; caustic soda and S dip (Shilston) 686; manuf. of NaClO from (Cattania) 1670; (Hirt) P 2800; H potentials of, solns. and dissociation const. of water (Frary) 2827; influence on α-glucosidase (Bourquelot) 2896; H- and hydroxyl-ion activities of, in presence of neutral salts (Harned) 3156.

Sodium hypobromite, estg. urea by (Mestrezat) 1069.

Sodium hypochlorite, photokinetics of, solns. (Spencer) 407; manuf. from NaOH (Cattania) 1670; prep. (Ricci) 2294; action on amides of α-hydroxy acids (Weerman) 3233.

Sodium hypoiodite, estg. aldoses—action of neutral (Bland) 186.

Sodium hyposulfite, anhyd. (Kinzlberger & Co.) P 1378; concd. solns. (Oddo) P 2804.

Sodium iodide, action on heart and blood vessels (Macht) 659; elec. cond. and viscosity of, in mixts. of EtOH and H_2O (Wightman) 993; cond. and ionization in abs. EtOH (Robertson) 2018; compd. with sarcosine (Pfeiffer) 2653.

Sodium magnesium borosilicate, glass (Weintraub) P 3034.

Sodium methylate, reactions with 1,2-dinitro-, 1,2,4-dinitrochloro- and 1,2,4-dinitrobromobenzene (Acree) 2343.

Sodium molybdenum semipentoxide and trihydrate (Mawrow) 2359.

Sodium nitrate *vs.* $(NH_4)_2SO_4$ as fertilizer (Pospisil) 116; (Bosch) P 129; as fertilizer (Wagner) 502; action on potato and sugar beet (Mausberg) 685; in 1914 848; production statistics (Bradbury) 1217; perchlorate in Chile saltpeter (Maschhaupt) 1651; fertilizer expts. for 1912 (Reitmair) 1818; detg. strength of sewages (Lederer) 2786; and germination (Micheels) 2922; sepg. NaCl from (Gibbs & Co.) P 3120.

Sodium nitrite, manuf. (Turner) 2431.

Sodium nitroprusside, titration of Ni with (Zuccari) 2200; see also *Nitroprussides*.

Sodium oxides, heat effect of Cr_2O_3 and Al_2O_3 in fusions with Na_2O_2 (Mixter) 1437; Na_2O_2 method for S (Roe) 2203; detg. heat of combination of H_2O by fusion with Na_2O_2 (Mixter) 2478; disintegration of materials by fusion with Na_2O_2 (Noaillon) 2745; system: Na_2O–B_2O_3–H_2O (Sborgi) 2845.

Sodium perborate, in dyeing (Trepka) 2151; stable mixts. with tartaric or citric acid (Chem. Werke Kirchhoff, etc.) P 2577; soap (Kochendoerfer) P 2821.

Sodium phenolate, cond. and ionization in abs. EtOH (Robertson) 2018.

Sodium phenylthiourasole, cond. and ionization in abs. EtOH (Robertson) 2018.

Sodium phosphates and photographic development (Lüppo-Cramer) 1722; intravenous injections of (Greenwald) 2671; NaH_2PO_4 (Strickler) P 2798; toxicity of $Na_4P_2O_7$ (Symes) 3101.

Sodium salicylate, discoloration of, soln. by alkalies (Greenish) 1530; caffeine- (Liesegang) 1572; and arthritis (Davis) 1640; discoloration of, soln. (Macadie) 1666; influence on elimination of waste products from blood (Denis) 3299; see also *Salicylic acid*.

Sodium salts, absorption spectra of, of aldoximes (Brady) 197; *vs.* K salts medicinally, 353; from ashes of algae (Klingbiel) P 518; (Hargreaves) P 1673.

Sodium selenate, prep. (Meyer) 2744.

Sodium silicates, $Na_2SiO_3.9H_2O$ (Vesterberg) 276; (Magelssen) P 851; prepg. soln. of (Vail) P 1125; clarifying, solns. (Vail) P 1227; S, Se and Te in, glasses (Fenaroli) 1539; heat-insulating tubing from (Maywald) P 2300; (Erdenbrecher) 2627; as preservative for preps. evolving O (Kind) 2971.

Sodium silicoaluminate (Cowles) P 696.

Sodium sulfates, scrapers for salt-cake furnaces (Farbw.) P 358; mol. wt. of Na_2SO_4 (Richards) 735; action of Na_2SO_4 on wool (Fort) 1120; Na_2SO_4 (A.-G. Dynamit Nobel) P 1228 (Chem. Fab. Rhenania, etc.) P 1233; formation in nature (Lucas) 1732; Na_2SO_4 as substitute for soda in bottle glass, 1981; in plaster of Paris (Canals) 2290; double salt with K_2SO_4 (Okada) 2491; transformation p. of Na_2SO_4 (Kaye) 3161; partial substitution of $NaHSO_4$ for alum in sizing paper 3129.

Sodium sulfide (Moore) P 1099.

Sodium sulfites, formation from $Na_2S_2O_3$ by yeast (Neuberg) 58; drying $NaHSO_3$ crystals (Howard) P 1672; detecting $NaHSO_3$ in meat (Folck) 2111.

Sodium tellurite, as rapid test for viability of tubercle bacilli (Corper) 1340.

Sodium tetraoxalodioldichromiate (Werner) 37.

Sodium thiocyanate, action in tuberculosis (Corper) 1508.

Sodium thiosulfate, transformation into H_2S and Na_2SO_3 by yeast (Neuberg) 58; disintoxication of malonic nitrile by (Somer) 104; action of acids on, in presence of CH_2O (Vanino) 275; (Descamps) P 516; reactions between $CaOCl_2$ and (Strunk) 1208; stand-

ardization of, soln. (Mayer) 1286, 2853 (Grant) 2628; and estn. of pentavalent V (Oberhelman) 1727; (Chem. Fab. Greisheim-Elek.) P 1832; action of Cl on (Self) 2628.

Sodium tungstate, action of acids on (Lottermoser) 748.

Softening of olives (Bioletti) 1350; wood (Petersen-Hviid) P 1681; of white pigment paints 1848; influence of time of annealing on, of stretched bronze wires (Müller) 3208; degummed flax, ramie, etc. (Burton) P 3366; skins (Morin) P 3379; see also *Water, purification of*.

Soils, white, in variegated sandstone regions (Falckenstein) 115; capillary power of (Green) 115; sources of NH_3 in (Jodidi) 115; phys. properties of (Kopecky) 115 (Trnka) 231; denitrification in, of diff. water content (Lemmerman) 115; bacteria in forest (Räuber) 115; locking up of phosphate fertilizers in Java (Jongh) 116; fine, in mortars (Benson) 139; recent brown, in India (Lang) 191; present state of, chemistry (Jodidi) 230; consistence curves of mineral (Johansson) 230; decomp. of carbonates (McIntire) 230; sterilization and disinfection of 231; red (Blanck) 231; effect of calcareous, on plants (Gile) 231; in Russia (Nabokich) 231; oxidizing NH_4 compds. to nitrates in (Wood) P 233; tetracarbonimide in (Shorey) 345; non-existence of $MgCO_3$ in humid (MacIntire) 346; acidity of Iowa (Brown) 347; bacteriol. study (Brown) 347 (Voitkievicz) 2788; fertility in Iowa (Brown) 347; nitric N in Utah (Stewart) 347; Kansas (Swanson) 347; Bacteriology (Burgess, book) 349; Management (King, book) 349; destructive distn. of (Holmyard) 498; bacterial action in (Rahn) 499 (Greaves) 1215 (Christensen) 1961; antagonism between anions as affecting bacteria of (Lipman) 499, 1649; N metabolism of (Green) 499; acid, in Assam (Meggitt) 500; red clay, of Porto Rico (Gile) 500; acidity of (Daikuhara) 500 (Voelcker) 2281; and strawberries (Vercier) 502; Clyde series of (Bonsteel) 680; laterite, and laterization in Italian (Dominicis) 680; and N changes (Robson) 681; mineralogical analyses of sandy (Vendl) 681; bacteria of frozen (Conn) 683; crops on alkali land (Hansen) 683; moisture in, of Western Oregon (Powers) 683; colloids and, solns. (Cameron) 832; intern. comm. for exam. of (Schucht) 832; nitrate content of, and lab. drying (Buddin) 832; N and org. matter in (Stewart) 833; evapn. of water from (Keen) 833; higher plants and nitrates in (Lyon) 833; detg. sulfofying power of (Brown) 833, 2280; sterilizing (Buddin) (Berthault) 834 (Holmes) P 949 (Russell) 1649; ammonification in (Lipman) 834; bacteria in (Conn) 835; nitrification in fallow (Velbel) 835; enriching in N (Krainskii) 835; nitrate content of (Welbull) 835 (Kellerman) 1215; removal of lime from, by fumes (Wieler) 836; S in bacterial activities of (Vogel) 837; lime on moor (Densch) 838; cancer in relation to (Barth) 932; As and N fixing powers of (Greaves) 946; form of N in (Schmuk) 946; assimilation of N by organisms in (Schneidewind) 947; barren spots (Hutin) 947; escape of NH_3 from, treated with liquid manure (Liechti) 947; inoculation with legume bacteria (Feilitzen) 947; isolation of *B. radicicola* from (Lipman) 947; sandy, Sylvan Beach, N. Y. (Knight) 947; field test with vanillin (Skinner) 948; effect on plant growth of satg., with CO_2 (Noyes) 949; Letter Files of S. W. Johnson (Osborne, book) 949; from E. Africa Protectorate 1084; development of science of (Neuss) 1084; colloids and sugar beet culture (Rohland) 1084; biol. absorption of H_3PO_4 in (Dushechkin) 1085; crop-residue in (Schulze) 1085; injury by disinfectants to seeds and roots in sandy (Hartley) 1086; Die Klassifikation der Bodenarten auf Grund des Gehaltes an bodenbildenden Bestandteilen (Kopecky, book) 1087; colloid chemistry and—exchange reactions in (Gedroits) 1215; adsorption phenomena (Ssokolovskii) 1215; utilisation of muck lands (Robinson) 1216; mobilization of H_3PO_4 of (Severin) 1216; "moor colonial oat sickness" on clay (Hudig) 1217; osmotic pressure of, soln. and growth of wheat (Toulaikov) 1217; recognition of lateritic (Bernardini) 1292; concretions due to Mn or lime (Helbig) 1292; moisture and succession of plant associations (Fuller) 1345; of Pa. (Shaw) 1360; of Sassafras series (Bonsteel) 1361; Miami series of (Bonsteel) 1361; nitrification in peaty (Coquidé) 1361; of New Zealand (Neustruev) 1361; protozoa (Cunningham) 1361, 1650 (Martin) 1650 (Sherman) 1961 (Kopeloff) 2788; accumulated fertility in grass land from phosphatic manuring (Somerville) 1362; radioactive content of Minnesota (Sanderson) 1428; osmosis in (Lynde) 1524; atm. of (Russell) 1648; fertility relations in strata of, (Nostitz) 1648; "nitre spots" in (Stewart) 1649; petrography of volcanic (Fry) 1649; relation of chem. compn. to fertility of (Fraps) 1649; influence of smoke acids on (Gerlach) 1650; in Oregon (McCool) 1650; moisture relations of Texas (Fraps) 1650; of Mass. and Conn. with special reference to apples and peaches (Wilder) 1650; relation of S to fertility (Shedd) 1652 (Brown) 2120; lime requirements of (Hutchinson) 1652 (Jones) 1961; surface tension and moisture (Karraker) 1815; engineering properties (Davis) 1815; N fixation in Colorado (Headden) 1815; Li in (Steinkoenig) 1815; colloidal properties of, of Japan (Takodoro) 1815; S and S compds. in (Kappen) 1816; action of foliage and needle forests on (Koch) 1816; alk. reaction of (Masoni) 1816; of Hawaiian Is. (McGeorge) 1816 (Wilcox) 2417 (Kelley) 2960; hay from diff. (Tacke) 1951; absorption

Traube (Waterman) 3153; mol. state of salts in (Turner) 3154; dissoc. of water in salt (Palmaer) 3154; dilatation of (Cabrera) 3156; influence of nature of adsorbent in adsorption from aq. solns. (Freundlich) 3156; d. and viscosity of aq.—HNO_3 (Bousfield) 3157; mutarotation in aqueous (Irvine) 3230.

Solutions, solid, sp. heat of alloys composed of (Rolla) 173, 2620; hardness of (Desch) 437; metallic (Guertler) 779; in steels (Campbell) 2756.

Solution volume, of Br in H_2O, CCl_4 and $PhNO_2$ (Joseph) 993.

Solvate theory, of soln. (Schaeffer) 13; absorption spectra and, of solns. (Jones) 408.

Solvay process, demonstration of (Bräuer) 549.

Solvents, ebullioscopic behavior of, at diff. pressures (Beckmann) 7, 746, 3011; pyridine as, in detg. active H in org. compds. (Zerevitinov) 75; for pyroxylin (Kniffen) P 153; cryoscopic and ebullioscopic (Beckmann) 171; salts contg. 2, of crystn. (Marsh) 171; and optical rotation—isomeric (Patterson) 171; e. m. fs. and electrode potentials in mixed (Pearce) 172; recovery of volatile (Barthélemy) 245, 1259 (Boecler) P 872 (Du Pont de Nemours Powder Co.) P 2727; for varnish (Frank) 386; detg. diff. between v. p. of soln. and that of (Frazer) 403; solvent properties of $AgNO_3$ soln. (Lowry) 559; C_2HCl_3 for rubber (Hildebrand) P 872; action of chlorinated, on copals (Coffignier) 972; elec. cond. of electrolytes in org. (Pearce) 992; and viscosity of rubber solns. (Kirchhof) 1134; extg. oils by volatile (Kosel) 1256; anyhdrous hydrazine (Welsh) 1267; conds., dissocns. and viscosities of solns. of electrolytes in aq., non-aq. and mixed (Jones) 1269; influence on mol. wt. of dissolved substances (Beckmann) 1570; influence of sucrose and alkali chlorides on solvent power of water (Philip) 1572; dielec. const. of org., at their m. or b. ps. (Cauwood) 1576; influence of, on splitting off of CO_2 from dihydroxybenzoic acids (Hemmelmayr) 1761; HNO_3 as, for rubbers (Jones) 2004; hydrated and complex mols. in non-associated (Szyszkowski) 2014, 2015; association between ions and (Quartaroli) 2017; for extg. metal from ores (MacKay) P 2038; elec. cond. in mixed (Doroshevskii) 2173; distribution of electrolyte between water and a 2nd (Creighton) 2175; influence of, on sign of product in conversion of phenylchloroacetic acid (Senter) 2227; for acetylcellulose (Lindsay) P 2311 (Bayer and Co.) P 2312; recovery from machine processes in rubber ind. (Hoffmann) 2327; $SbCl_5$ as (Moles) 2342; action on vulcanized rubber (Stevens) 2466; use of HCNO in glacial AcOH, etc. (Bailey) 2530; extn. by immiscible (Self) 2691; rubber, in war time (Frank) 2822; reaction of amylene with CCl_3CO_2H in different (Timotheev) 2896; resin (Hilwitz) 2988; elec. cond. and dissociation in, with dielec. consts. up to 80 (Sakhanov) 3009; influence of electrolytes on dissociating power of (Sakhanov) 3014; heat of soln. in mixed (Tanatar) 3018; ionization in, of low dielec. const. (Turner) 3154; variation of cryoscopic const. with mol. wt. of solvent (Guzman Carrancio) 3157; of gutta-percha (Prins) 3299; for nitrocellulose (Hibbert) P 3363.

Sommerfeld action principle and Planck's quantum theory (Wolfke) 3021.

Soot, sepg., from producer- or water-gas (Dicke) P 1108; (Schröder) P 2438; compn. for destroying (Watt) P 3125.

Sopium preparations 954.

***d*-Sorbitol**, test for (Mandel) 3081.

Sorghum, as source of sugar or as fodder (Annett) 1701; preserving (Benjamin) P 1855; HCN in (Willaman) 1949.

Sorting, finely divided materials (Hitchcock) P 1232.

Sound, velocity of, in gases (Westphal) 12; velocity of, in A and influence of X-rays on it (Streider) 553; influence of X-rays, ultraviolet light, γ-rays and alternating field on velocity of, in gases (Küpper) 554; abs. measure of (Heindlhofer) 879; velocity of, in detg. sp. heats of gases (Leduc) 2021.

Sound-absorber (Sabine) P 238.

Soups, com. condensed (Congdon) 1077.

Soy bean, urease of, in urine detn. (Eigenberger) 1187; urease (Jacoby) 1492; activation of, urease by human serum (Neumann) 1491; (Friedman) P 1643; lipase of (Falk) 1922; plastic material from (Dodd) P 2296.

Soy bean oil, for paint 386; oxidation and polymerization of (Taverne) 2716.

Space lattice, visualization in crystals (von Laue) 3000.

Spangolite (Ford) 425.

Sparing action, N, of NH_4 salts and urea (Grafe) 3279.

Spark-over, in oil (Peek) 2487.

Spark plug, porcelain (Singer) P 1104.

Spark points, alloy for (Brown) P 2740.

Sparks, branching, on Röntgen tubes (Thieme) 1718.

Sparteine, assay of medicinal tablets (Jones) 509; chloroplatinate of addition product with AcPh (Paternò) 618.

Digitized by Google

Spasms, action of diff. poisons producing (Morita) 1511.

Specific gravity. See *Density*.

Specific heat of Cu (Harper) 10; of alloys (Rolla) 173, 2620; at low temps.—of Pb and Cu (Keesom) 405; of alkali halides (Brönsted) 405; detn. of C_p/C_v (Nagele) 548; of liquids (Schulze) 548; of air, H, CO_2 and N_2O (Mercer) 738; relation between Joule-Thomson effect, equation of condition and (Plank) 880; measuring (Ewald) 997; (A. B.) 1141; ratio of, for N and H and for CO_2 (Crofts) 1573; of liquids and vapors (Pagliani) 1574; equi-partition hypothesis and detn. of, of gases (Stewart) 1575; of Hg at low temps. (Onnes) 1580; of refractory products (Steger) 1675; ratio of, of gases (Leduc) 2021, 1870 (Schöler) 2181; detg., of liquids (Hartuug) 405, 2180 (Heydweiller) 2181; of ice (Dickinson) 2344; of Pt (Fabaro) 2346; of superheated steam (Knoblauch) 2480; of NH_3 (Haber) 2620; new relations between thermodynamics and kinetic theory of (Pagliani) 3016; of gases at high pressures (Holborn) 3148; of gases at low temps. (Scheel) 3148; and plasticity of metals (Skaupy) 3161; Bestimmung der spezifischen Wärme unvollkommener Gase nach der Durchströmungsmethode (Berneis, book) 3167; of muscle protein (Krummacher) 3284.

Specificity, non-, of carbohydrate tolerance tests (Friedman) 98; of cholesterol with syphilitic serums and of cholesterol-reinforced heart antigen in Wassermann reaction (Walker) 98; sex, of Abderhalden protective enzymes (Wegener) 98; of protective enzymes (Jaffe) 930, 2105; of caseinogens (Dudley) 1623.

Specific volume. See *Volume*.

Spectacles, for viewing sources of intense radiation (Clark) P 1138.

Spectrochemistry of benzene derivs. (v. Auwers) 1459; of heterocyclic compds. (v. Auwers) 1460.

Spectrographs, light intensities of (Volkmann) 2029.

Spectrography, in analytical and ind. chem. (Lewis) 1883; of amino acids and polypeptides (Kober) 3252.

Spectrometer, influence of components of crystal on form of spectrum in X-ray—analysis of crystals with X-ray (Bragg) 1579.

Spectroscope, micro-, in mineralogy (Wherry) 1445.

Spectroscopy of active N (Jevons) 749; of Extreme Ultraviolet (Lyman, book) 886; of reduction of hemoglobin by reductase (Harris) 1489; color reactions of indole derivs. and of urine of dogs after their administration (Homer) 3074; Numerical Data of (Brüninghaus, book) 3167.

Spectrum, resonance, of Hg vapor (Malinowski) 14; ultraviolet, of aq. solns. of HNO_3 and of metallic nitrates (Massol) 14; emission of enhanced lines in H atm. (King) 15; Fe (Eversheim) 17; action of elec. and magnetic fields on red H line (Garbasso) 18; const. diffs. in line (Paulson) 18; of CO and CO_2 (Hof) 18; of Hg (Cardaun) 18; pressure displacement of spectral lines and mol. constitution (Livens) 18; widening of H lines in spark (Rossi) 18; Die Atomionen chem. Elemente und ihre Kanalstrahlen-Spektra (Stark, book) 19; ordinals (Brock) 22; burners with salt spray (Beckmann) 173; of H (Lunelund) 173; phenomena in radiation of edges with X-rays (Laub) 174; refraction of Röntgen light on Pb edge (Laub) 174, 552; quantum effect in high frequency (Landé) 175; Röntgen, of Pt (Seemann) 175 (Wagner) 1718; sepn. of, lines (Wood) 264; wave lengths of lines of N and O (Clark) 264; of Cu, Al, Au, Ag, Zn and C (Eder) 408; infra-red (Bjerrum) 408 (Westphal) 2621; of vapor lamps (Saunders) 549; of alkali metals (Theissen) 549 (Watts) 2484; luminous vapors distd. from arc and, series (Strutt) 550; of oscillatory discharge in gases (Brunetti) 551; Röntgen ray (Siegbahn) 750 (Sommerfeld) 2032; La (Paulson) 751; Zeeman effect in (du Bois) 751; widening of, lines (Wendt) 751 (Rayleigh) 1872; magnetic decompn. of, lines and temp. (Woltjer) 752; magnetic field of an atom and spectral series (Allen) 753; series, of H and structure of atom (Allen) 753 (Bohr) 1005 (Vegard) 2484; of Pd (Paulson) 881; permanent electronic orbits and origin of spectral series (Walker) 881; effect of elec. field on (Stark) (Voigt) 882; red, of A (Paulson) 882; spark, of Ni (Bilham) 882; dispersion of light in gases in ultraviolet (Koch) 884; regularities in line (Popow) 884; of X-rays obtained by lamellar or fibrous substances (Nishikawa) 888; Stark-LoSurdo phenomenon (Garbasso) 998; anomalous Zeeman effect in satellites of violet line of Hg (Nagaoka) 1001; wave length sensibility curves for Se (Sieg) 1002; Zeeman effect for series lines (Voigt) 1002; of H and He (Evans) 1002 (Merton) (Bohr) 1269 (Nicholson) 1003, 1269; "Grundspectra" of alkali and alk. earth metals (Nelthorpe) 1003; high frequency, of elements (Malmer) 1144; of ordinary Pb and Pb of radioactive origin (Merton) 1148; elec. decompn. of spectral lines (Lo Surdo) 1269; resonance, of Na vapor in magnetic field (Strutt) 1269; variability of, lines in Fe arc (St. John) 1424; wave lengths in ultraviolet Fe (Burns) 1424; elec. resolution of series lines in Hg (Wendt) 1425; wave frequency in Sc (Paulson) 1426; laws of series (Nicholson) 1577; variation with temp. of, of V and Cr (King) 1577; diff. character of, lines belonging to same series (Royds) 1578; displacements in, lines of Zn and Ti (Morrow) 1578; influence of components of crystal on form of, in X-ray spectrometer—X-ray, of

Digitized by Google

quartz and S crystals (Bragg) 1579; intensity of X-ray (Webster) 1714; of β-rays of Radio-Th and Th-X (Baeyer) 1717; ultraviolet excitation of D line of Na (Strutt) 1871, 1872; effect of pressure on arc (Duffield) 1872; from Hg vapor in elec. field (Child) 1874; arc, of Au (Quincke) 2029; arc, of Mn (Fuchs) 2029; continuous, of gases (Lewis) 2029; of Gd (Paulson) 2030; Pt (Paulson) 2030; infra-red transmission and reflection of aniline dyes (Johnson) 2031; plotting sepn. of homologous pairs of, lines against at. numbers (Ives) 2031; investigations with X-rays (Wagner) 2033; and constitution (Tammann) 2348; of homogeneous secondary X-rays (Glagolev) (Broglie) 2350; spark, of N'Kandhla meteorite (Lunt) 2366; and heliotropic reactions (Loeb) 2391; origin of, lines (Merton) 2481; pole effects in Fe arc (St. John) 2481; quantum theory (Wilson) 2481; spark, of Pt metals (Kail) 2481; beyond Schumann region (Lyman) 2482; dissociation (Gramont) 2482; of alk. earths (Hicks) 2482; radiation from elec. source and line (Silberstein) 2484; emission of, lines (Ladenburg) 2621; comparison of wave length of Ne line with that of Cd line (Takamine) 2622; of Bi and Cd (Takamine) 2622; effect of elec. and magnetic fields on emission lines of solids (Mendenhall) 2733; interference measurements of wave length in Fe (Burns) 3021; tube-arc, of Fe (King) 3021; wave lengths in, of Ne (Meggers) 3021; comparison of arc and spark, of Ni (Duffield) 3022; high-frequency, of W (Barnes) 3026; ionization potentials and, of Hg, Cd and Zn (McLennan) 3155; dispersion in long wave (Rubens) 3164; infra-red arc, of Ba (Marshall) 3164.

Spectrum, analysis, of mol. canal rays (Stark) 13; Elektrische Spektralanalyse Chemischer Atoms (Stark, book) 1004.

Spectrum, band, of BN (Jevons) 749; new type of series in He (Fowler) 1426; in residual rays of diat. substances (Mandersloot) 1713; of N and C (Seeliger) 2030; of He (Nicholson) 2482; Thiele's "phase" in (Uhler) 3164; **absorption,** of oximes, their Na salts and Me ethers (Brady) 197; of BzH derivs. (Purvis) 207; of phthalides and related compds. (Pratt) 295, 882; of thiazine dyes (Kehrmann) 318; and solvate theory of solns. (Jones) 408; of X-rays (Kossel) 552; and constitution of ketones (Henderson) 611, infra-red bands of hemoglobin (Hartridge) 634; of H_2SO_3 and sulfites (Wright) 749; at low temps. (Mazzucchelli) 750; of org. substances and electron theory (McCleland) 882; polymorphism and (Schaum) 1003; of chlorophyll (Gulik) 1145; of solns. studied by radiomicrometer (Jones) 1269 (Jones, *et al.*, book) 1874; of dioximines (Chugaev) 1270; and chem. constitution (Goudriaan) 1871; of halogen derivs. of C_6H_6 and toluene (Purvis) 2030; and constitution of benzene derivs. (Velyashko) 2070; (Lankshear) 2184; of NH_4 *d*-α-bromocamphor-β-sulfonate—of anisole, phenetole, and derivs. (Purvis) 2184; of monosubstituted benzene compds. (Strasser) 2348; (Baly) 2729; of diethyl succinosuccinate (Gibbs) 2526; quantum theory and ultra-red, of water vapor (Eucken) 2622; of derivs. of benzoic acid (Purvis) 2734; of Nd (Garnier) 3162; of aromatic nitroamines and nitroamides (Morgan) 3164; of compds. of P, As, Pb and Br (Crymble) 3164; of acid sulfites (Garrett) 3165; see also *Absorption, of rays; Light.*

Spectrum, fluorescence, of Na vapor (Strutt) 2184.

Spelter, manuf. and properties (Stone) 1294; analysis (Price) 2203; detg., coating on sheets and wire (Aupperle) 2630; standard specifications 3201; effects of impurities on slush castings (Rigg) 3212; from mixed Fe-Pb-Zn ores (Fingland) P 3216.

Spent oxides. See *Iron oxides.*

Spermaceti, solidification and m. ps. of (Meldrum) 974; prep. of histone from flounder (Eddy) 3071.

Spermatozoön, entrance of, into egg (Loeb) 938.

Speziaite (Colomba) 577.

Sphagnum (Skene) 1797.

Sphalerite, constitution of (Beutell) 2495.

"Spherosiderite," from coal basin (Kubart) 2859.

Spices, analysis (Arragon) 1945; detg. water in (Itallie) 2269; comp. (Sutthoff) 2948.

Spider, common red (Ewing) 665; poisons of (Walbum) 2552.

Spinal fluid, amino acid in, of syphilitics (Ellis) 655; As in (Hall) 1509; urea in (Cullen) 1635; N partition in (Woods) 3287.

Spine, spinal anesthesia in cat (Smith) 2778.

Spinel, group of crystals (Bragg) 2731.

Spinning, silk (Herzog) 1250; prepg. fibers for (Kubler) P 1251 (Freeman) P 1546; glass (Passiczky) P 1679.

Spiranes, prep. of stereoisomeric (Leuchs) 84; (Leuchs) 2381; ring formation in (Leuchs) 3242.

Spirit of nitrous ether (Umney) 351; compn. and pharmacol. action (Marshall) 2672.

Spirits, Sike's tables for detg. proof-strengths (Carter) 117; motor (Hempel) 372 (Mohr) 373 (Hall) P 1840, 1994 (Shedlock) 1994; estg. S in motor (Bradbury) 1111; inds. in 1913 (Rüdiger) 1221, 1658; continuous distn. and rectification (Salvicek) P 1527; working up raw sugars into (Reinke) 1824; exam. of potable (Buchka) 1967; distd. in 1912 (Adams) 3115; see also *Beverages; Ethyl alcohol; Liquors,* etc.

Spirochetes, action of atoxyl and immunity with fowl (Aoki) 223; *Spirochaeta pallida,* agglutination (Kissinger) 1804.

Digitized by Google

Spiro compounds, from cyclohexane (Beesley) 3059.
Spiropters, cancer (Fibiger) 101.
"Spitting" of Ag (Baker) 566.
Spleen, lipoids in (Kusonoki) 99; and cholesterol metabolism (Soper) 2397; influence on localization of Fe in organs of pigeon (Chevallier) 2551; as Fe assimilative organ (Chevallier) 2933; metabolism in dog before and after removal of (Goldschmidt) 2936; function in exptl. infection of albino mice with *B. tuberculosis* (Lewis) 2937; hemolytic activity in pernicious anemia (Robertson) 3288.
Splenectomy, N metabolism and, in pernicious anemia (Minot) 482; serum in hemolytic anemia by (Bastai) 1935; permeability to glucose of red corpuscles of splenectomized dogs (Donati) 2767; metabolism studies before and after, in congenital hemolytic icterus (Goldschmidt) 2929; urobilin in stool in pernicious anemia as influenced by (Robertson) 2929.
Splenomegaly, metabolism in (McKelvey) 933, 1635.
Splitting. See *Cleavage*.
Spodumene (Jaeger) 894.
Sponge, art. (Otterepetz) P 956 (Raabe) P 1378 (Pum) P 1978 (P. Röder, etc.) P 2433.
Spontaneous combustion. See *Combustion*.
Spoonwort, volatile oil of (Prenbrock) 123.
Spraying, applying metal surface by (Osborne) 587 (Schoop) P 1278; coal (Morin) P 1387.
Sprays, Burgundy mixt. (Fonzes-Diacon) 686; and rate of transpiration (Duggar) 949; for Peronospora (Bretschneider) 1220; Paris green (McGill) 1363; for potatoes (Bedford) 1654; As and Pb (Cutolo) 1654; Cu (Fonzes-Diacon) 1963; effect of KCN on trees (Shattuck) 1963; for cooling water 2009; for plants (Grether) P 2560; effect of Na_2AsO_3 on soil (McGeorge) 2684; control of wooly aphis by Duval's method (Liévre) 3114; expts. with crude H_2O_2 (Portele) 3114; see also *Bordeaux mixture; Lime-sulfur; Disinfectants; Insecticides*.
Springs, alloy for (Metzger) P 2637.
Sprinkling, pulverulent material (Mörtelwerk Jolit) P 361.
Spruce, available for paper pulp (Brown) 1113.
Sputum, fats in (Barbaro) 101; "albumin reaction" of, in tuberculosis (Glover) (Benzler) 215 (Cocke) 481; albumin in (Lockwood) 933; sterilization of tuberculous (Messerschmidt) 1343; physico-chem. investigations —in pneumonia (Bertollini) 3097.
Stability, of an oil emulsion and p. d. at oil-water boundary and coagulation of colloidal suspensions (Powis) 737; of mol. and of complex anions (Ephraim) 2195; effect of addition of diphenylamine on, of nitrocellulose powders (Dupre) 2980.
Stabilization, adsorption and (Blucher) 169; of nitro explosives (Stoltzenberg) P 2313; see also *Hydrogen peroxide*.
Stachydrine, extn. of (Deleano) 3327.
Staining, vital, with acid dyes (Mettenddrf) 220; vital, of kidneys (Gross) 222; physico-chem. of vital (Höber) 467 (Traube) 1791; *Treponema pallidum* (Droedova) 814; of yeast cells (Matthews) 923; for potato starch (Blunck) 1809; Ueber den mikroskopischen Nachweis v. Oxydase in Gewebeschnitten m. e Anh. über Vitalfärbung (Kriegbaum, book) 1928; testing non-, quality of textile oils (Gray) 2816; cells in cerebrospinal fluid (Lemchen) 3080; of leathers in war time (Lamb) 3143.
Stains, for wood (Roberts) P 726 (Harris) P 972; for diphtheria (Kenyoun) 1343, removing (Ockelmann) P 2003; for bacteria (Beintker) P 2395; for mucins and mucoids (Berman) 3079.
Stair-treads (Hopp) P 3333.
Stalactites, pseudo-, etc. (Liesegang) 773.
Stalagmometer (Traube) 2902.
Stalagmometry (Berceller) 2902.
Staling of bread (Katz) 1808.
Stamping fibrous materials (Bermig) P 699.
Stamps (Rieder) P 1012.
Stand, filter 537; test tube 537.
"Standard acetate" solutions, effect of dila. on H potentials of (Walpole) 999.
Standard cell. See *Cells, voltaic*.
Standardization of alkalimetric solns. (Dodge) 277; of $Na_2S_2O_3$ soln. (Mayer) 1286, 2853 (Grant) 2628; of $KMnO_4$ (Moyer) 2199; of colored fluids (Arny) 2492; acid K phthalate and acid Na phthalate as standards in acidimetry and alkalimetry (Hendrixson) 2853; of digestive ferments and animal products (Graber) 2968; of mill process (Kress) 3129.
Standard solutions, As_2O_3 (Menzies) 2628.
Stannic acid hydrosol (Zsigmondy) 546.
Stannic and stannous chlorides, etc. See *Tin chlorides*, etc.
Staphylococci, proteolytic action of (Rosenthal) 1493.
Starch, chemistry of (Pringsheim) 83, 1132; and infant digestion (Southworth) 96; action of HCl on (Daish) 196; diastatic decompn. (Samec) 468; formation and decompn. (Lundegardh) 476; modification of, by gaseous HCl (Frary) 1132; food unit and, value (Hansson) 1355; soly. of CO_2 in water in presence of (Findlay) 1572; pasta iodi et amyli, B. P. C. (Boa) 1667; tacca umbrarum 1702; change in staling of bread (Katz) 1808; effect of Pb tannate on polarimetric detn. (Grossfeld) 1853; plurality of starches (Tanret) 1912; changes in colloidal state (Samec) 2097; behavior of iodized, toward Pukall cell and Vanino's reagent (Vanino) 2125; enzyme from malt (Born) 2562; digestion (Yerington) 2664; as intermediate product in metabolism of organisms (Waterman) 2775; enzyme producing (Heintz) (Windisch) (Lintner) 2964; prepg., that swells rapidly in water (Gies) 3079; action of mineral acids

Steel alloys. See *Iron alloys.*

Steeping, of grain, with H_2O_2 (Deyl) 3113.

Stellasterin (Kossel) 2947.

Stellite (Haynes) 1892, 3204.

Stemming, origin and meaning of term (Spilsbury) 2983.

Stencil-paper (Gestetner) P 697; (Strippel) P 2298.

Stercobilin, test for, in feces (Gastaldi) 638.

Sterculia foetida (Brill) 3140.

Stereochemistry of germ plasm (Reichert) 918; and biol. action of NH_4 compds. (Plate) 1071; and the electron theory of valence (Fry) 1327.

Stereo-hexite-pentite theory, topical parameters in light of (Asch) 3152; and constitution of zinnwaldite and cryophyllite (Asch) 3194.

Stereoisomerism. See *Isomerism.*

Stereoscopic effect in pictures (Friedmann) P 1283.

Steric hindrance, effect of, on formation of amides (Morrell) 293; (Wenzel) 599; (Reddlien) 3246.

Steric influence (Davis) 2515.

Sterigmatocystis nigra, adaptation of, to lactose (Coupin) 640; in media contg. Cu, U and V (Javillier) 924.

"Steriline" (Bordas) 2677.

Sterilisation of milk (Lobeck) P 111 (Stanzwerk, etc.) P 944 (Cerlini) 1353 (Nielsen) P 673 (Rutter) P 1643 (Pfyl) 2405; of cottonseed (Barrow) P 227, 3372; of soils 231 (Berthault) 834 (Buddin) 834 (Holmes) P 949; of liquids (Henri) P 673; of tuberculous sputum (Messerschmidt) 1343; liquids in bottles (Giommi) P 1647; partial, of soils (Russell) 1649; (Helbronner) (Rutter) P 1813 (Dawe) P 2626; of phosphate sera (Guyot) 1927; of food products (Fenn) P 1952; of air (Calcar) P 2118; of vessels (Quarzlampenges) P 2124; of liquids by Schumann rays (Bovie) 2661; of vaccines (Taylor) 2668; ultraviolet rays for (Kowalski-Wierusz) P 2741; of ampoules (Stick) 3326; of wood or cellulose pulp (Ling) P 3314; see also *Milk; Water, purification of.*

Sterilising apparatus for milk (Reynierse) (Henri) P 111 (Merie) P 1082 (Shelmerdine) P 2408; for liquids (Henri) P 1214 (Recklinghausen) P 3314; (Deussen) 1862; using ultraviolet rays (Kowalski-Wieruss) P 2472 (Henri) P 2407; (Linden) P 2332; see also *Milk,* etc.

Sterins, sepn. from fats (Berg) 388; fungus (Ikeguchi) 473.

Sterol, pptn. with digitonin (Kühn) 1079, 2270 (Matthes) 1969.

Sterolin 955.

Stibnite, light sensibility of (Elliott) 1002; (Quercigh) 2045.

Stigmasterol glucoside and Ac deriv. (Clewer) 2885.

Stilbene derivatives (Stoermer) 1756.

Stilbene picrate (Reddelien) 1911.

Stilbenearsonic acids and derivs. (Karrer) 1333.

Stilbenes, photochem. study of (Stobbe) 1174; configuration of stereoisomeric, and their carboxylic acids (Stoermer) 1756.

Stilbite dehydration (Merwin) 31; analysis of (Vendl) 577; interchange of bases in (Beutell) 1889; (Beutell) 2046; (Surgonov) 2859.

Still. See *Apparatus, distillation.*

Stillingia sylvatica (Miller) 1533.

Stimulants, strychnine and caffeine as cardiovascular (Newburgh) 1202; action of central, on chloral narcosis (Morita) 1511; mate tea (Brieger) 1640.

Stimulation, muscarine poisoning and, of vagus nerve (Raaflaub) 484.

Stirrer of roasting furnaces (A.-G. für Zinkind. etc.) P 1300; for melting furnaces (Hall) P 1410; for slurry (Schröder) P 1559; for liquids, powders (Janensch) P 3338.

Stockfisch (Buttenberg) 2949.

Stock's reaction and vol. detn. of Al (Osipov) (Kovsharova) 2493.

Stockyards, biochem. O demand in, waste (Lederer) 1956.

Stoichiometry, review (Kremann) 1270.

Stokes method for detg. pyrite and marcasite (Allen) 187.

Stoking in gas generators (Poetter, G. m. b. H.) P 2586; with bagasse (Prinsen-Geerligs) 2722.

Stomach, neutralization of acid in (Milovsorov) 97 (Zaitzev) 3285; amino N in (Zunz) 332; action of bitter tonics on secretion of gastric juice (Carlson) 485; stimulatory power of water in human (Bergeim) 642-3; f. p. lowering by contents of (Meunier) 660; gastric hunger mechanism (Luckhardt) 818; HCl in (Hammett) 929; achylia of (Orlov) 933; effect of various procedures on passage of liquids from (Nelson) 1636; physiology of (Brunemeier) 1803 (Carlson) 2932; reactions of enzymes in (Pribram) 2097; Bi prep. for examg. (Réchou) 2128; gastric hyperacidity (Rolph) 2776; fat absorption from mammalian (Mendel) 2931; acidity of infant (Hess) 2936; acidity curves in (McClendon) 2937; pepsin and trypsin in fasting (Dorner) 3254; effect of X-rays and Bi taken *per os* on (Dietlen) 3282; production of gastric lesions and ulcers by extirpation of adrenals (Friedman) 3289; reaction between H_2S and salts of heavy metals in (Meneguzzi) 3296.

Stomach tube (Lanza) 2393.

Stone, cleaning (Bilton) P 140; porosity of building (Campbell) 240; drying and heating (Coleman) P 704, 1988; pulp (Dickson) 1390; transfers on (Homburg) P 2439; **light wt.** (Hochofen-, etc.) P 2446; -frame chem. hood (Weaver) 2470; sepg. from clay, loam, etc. (Müllenbach) P 2472; analysis of "ironstone" (Vickery) 2498; waterproofing (Heide) P 2808; see also *Lithographic stone.*

P 1837; (Atterbury) P 1837 (Capece) P 1987; products from (Fleishmann) P 1988; drying (Davidson) P 2140; (Westergard) (Weiler) P 2302; (Kraner) P 2303; (Conn) P 2808; (Whipple, book) 3346; see also *Cement, hydraulic; Concrete.*

Stone-ware ventilators (Fritzweiler) 539; see also *Ceramic ware.*

Stool, lab. (Deming) 2470.

Stopcocks, vacuum and pressure (Randall) 537; for liquids or gases (Buess) P 2011.

Stopper, bottle (Cantzler) 1261 (Fox-Bourne) P 2699; indicator, for distns. (Ferraro) 2165.

Storage of coal (Kershaw) 365, 706; coal, under water 365; of eggs and fruit (Dreher) P 493; of water (Houston) 495; tanks for pharm. preps. (E'We) 513; influence on ester content of beers (Windisch) 1089; of H_2O_2 (Zirconglas-G.) P 1101; of combustible liquids (Ind. Architektur- etc.) P 1139 (Hoffmann App. Ges.) P 2999; of digitalis substances in heart (Issekutz) 1511; of C_2H_2 (Dalen) P 1840; variation in weight of flour during (Sanderson) 1950; Conservation of Water by (Swain, book) 1959; magazines for explosives 2150; Am. table of distances between, magazines for explosives (Assheton) 2150; decrease of sugar content of sugar beets on (Foth) 2605; of benzine (Vernon) P 2826 (Strache) 3127; storing $CaCN_2$ (Burgess) 2961; see also *Refrigeration.*

Storage battery. See *Accumulators.*

Stovaine, strychnine antagonistic to? (Simon) 2400.

Stove, hot-blast (Brown) P 1743 (Pappe) 3198; prep. of charcoal for (Freund) 1989.

Strainer for liquids (Hindley) P 874; for paper pulp (Beaumont) P 1246; for wood-pulp and cellulose (Thoresen) P 2588.

Strainer plates, tests on 1208

Strains, internal, in cold-wrought metals (Heyn) 586.

Stratification, soln., as aid in purification of electrolytes (Pyne) 2624.

Straw, vat for drying (Kluge) P 382; and utilization of org. N in manures (Von May) 501; distn. of (Plauson) P 523; paper pulp from (Burton) P 525; sepg. resin from (Melhardt) P 1254; stock food from (Walker) P 1813; sepn. of wax from (Heuser) 2980; food value (Beckmann) 3309; disintegrated, for fodder (Lehmann) 3309; flax (Lappen) P 3356.

Strawberries (Vercier) 502.

Streak disease of barley (Tritschler) 1363.

Streaming of gases under high pressure (Cranz) 12; demonstration of, in interior of liquid (Zenneck) 16.

Streams. See *Waters, natural.*

Strecker's reaction (Stadnikov) 1901.

Streptococcus in excrement (Houston) 640, virulence among (McLeod) 1344; proteolytic action of (Rosenthal) 1493; *S. mucosus:* (Holman) 2394; classification (Hopkins) 2549, environmental studies—fermentative reactions (Broadhurst) 3268; splitting of casein by *S. lactis* (Barthel) 3269.

Stress, metals under (Lanstberry) 587; equalizing mol., of iron (Heinze) P 1170; time and shrinkage effect on, of reinforced-concrete beams (McMillan) 3345.

Striebeck system (Jurisch) 2429.

Stripping of elec. metal deposits (Jones) 56[illegible]

Strontia, sugar recovery from beet molasses by use of (Daude) 2158.

Strontium, incompatibility of, and Bi mixt (Sharman) 353; in 1913 (Hill) 431; in sugar ind. (Meyer) 869; production of metallic (Trautz) 3033.

Strontium, analysis, in water (Skinner) 3310

Strontium chloride, systems formed by $SrCl_2$, $BaCl_2$, and NaCl or KCl (Vortisch) 182, effect of growth of corn (Caldwell) 685, compd. with sarcosine (Pfeiffer) 2653.

Strontium dioxalodiaquochromiate (Werner) 35.

Strontium dioxaloethylenediammine chromiate (Werner) 35.

Strontium dioxalohydroxoaquochromiate (Werner) 36.

Strontium sulfate, solubility in solns. of Ca salts (Raffo) 2176.

Strontium sulfide, phototropy of (Mourelo) 1145.

Strophanthidin, identity with cymarigenin (Windaus) 2380.

Strophanthin, cryst. Kombé- (Brauns) 50[illegible] and suprarenal secretion (Richards) 659, behavior in digestive tract—splitting of, by enzymes—identification in stomach and intestine (Johannessohn) 663; action on coronary vessels (Sakai) 2110.

Strophanthin reaction (Baldoni) 2792; Kombé and Gratus (Reichard) 2792.

Strophanthus (Baldoni) 2792.

Strophanthus oil (Matthes) 1969; digitonin method for sterols in (Matthes) 1969; unsaponifiable constituents of (Heiduschka) 1970.

Strychnine, chem. constitution and physiol. action of (Paderi) 224; and respiration (Edsall) 336; assay of nux vomica for (E'We) 513; addition product with AcPh, and its picrate (Paternò) 619; fats and toxicity of (Paulucci) 1201; as cardiovascular stimulant (Newburgh) 1202; and brucine (Cinsa) 1479 in nux vomica (Ericson) 1528; antagonistic to stovaine? (Simon) 2400; color reactions of (Mameli) 2565; sepn. of quinine and, (Watson) 2969.

Strychnine compound, colloidal (McGuire) 225.

Walther etc.) 945; desulfurizing ores (Fusina) 1170; treating ores contg. (Birkeland) 1172; removing, from H (Bosch) 1227; removing from coal gas (Lloyd) 1242; desulfurizing shale oils (Hall) 1245; recovering, in smelting sulfide ores (Hall) 1297; from SO_2 in smelter gases (Lamoreaux) 1742; burner (Coombs) 2331; mining by fusion process (Frasch) 2800; extg. (Chem. Fab. Heyden) 3340; see also *Ores; Sprays; Lime-sulfur.*

Sulfur, analysis in peptone (Redfield) 1069; in motor spirits (Bradbury) 1111; (Levi) 1157; in rubber (Gaunt) 1258 (Tuttle) 1704 (Stevens) 2466; in gas (Dewey) 1385 (Weaver) 2304; in org. substances (Krieger) 1590 (Mandel) 3043; in wine (Baragiola) 1820; in culture medium (Redfield) 1929; in pyrites (Moore) 2203; Na_2O_2 method (Roe) 2203; in vegetable substances (deJong) 2745; in plants (McIntire) 3261; see also *Sulfuric acid; Sulfurous acid*

Sulfur compounds, oxidation of, of coal (Regester) 142; from gases (Cobb) P 371; obtained by action of HNO_3 on proteins (Mörner) 917; sepg., from producer- or water-gas (Dicke) P 1108; insecticidal alkali- (Hite) P 1220; action of pyridine on org. (Raffo) 1473; indigoid dyes contg. S (Albert) 1775; in soils (Kappen) 1816; in wine (Baragiola) 1820; derivs. of indole and methylindole (Madelung) 2253; action of $HgCl_2$, $CuCl_2$ and $PtCl_4$ on org. (Rây) 2890.

Sulfur dioxide in wine (Ferre) 117, 2685; from waste gas in sulfite pulp mills (Bergström) 149; (Sander) 279, 2042; utilizing, in gas mixts. (Det norske Aktieselskab) etc. P 371; system: H_2O–SO_2 (Baumé) 402; detg. in foods (Molstad) 487 (Jaffa) 1351; density of liquid (Baumé) 547; fusibility curves system SO_2–Me_2O and SO_2–MeOH (Baumé) 547; sepg., from gases (Basset) P 593 (Garner) P 2375; compd. of isoprene with (de Bruin) 623; detg. in gases (Lüders) 868 (Gautier) 3123; in wine making (Bioletti) 1221 (Mathieu) 1221 (Zanettini) 1967; reducing in smelter gases (Hall) P 1297 (Lamoreaux) P 1742; in cider vinegar manuf. (Cruess) 1350; detecting, in air (Denigès) 1359; Thorne's reclaiming system (Thorne) 1390, treating pearl barley with (Plücker) 1949; absorption by wine (Omeis) 2123; prepn. of solns. of (Cheney) 2286; oxidizing properties (Smythe) P 2491; (Cantilena) P 2700; in refining petroleum (Black) P 2814; addition products of olefins with (Matthews) P 2971; in sulfited tannin exts. (Schiffkorn) 2995; extinction measurements of (Garrett) 3165, action on eserine, etc. (Polonovski) 3222; internal temp. of S furnaces (Pagliani) 3331; reduction of, content in flue gases (Donath) 3349; method for detg. aromatic constituents in hydrocarbon mixts. (Rittman) 3356; recovering from paper pulp digesters (Miller) P 3358; see also *Sulfurous acid.*

Sulfuretted hydrogen. See *Hydrogen sulfide.*

Sulfuric acid, absorption of gasoline vapor in natural gas by (Anderson) 142; free from HNO_3 and oxides of N (Gregoire) 184, soln. velocity of Zn blende and galena in (Rosenkränzer) 276; viscosity of (Dunstan) 405; org. addition compds. with (Kendall) 454; formation of, from alkyl, and sulfonic acids (Neuberg) 472; formation from S (Zänker) 527; action on diprimary glycols (Franke) 910; sapon. of nitriles and ether, by conc. (Bougault) 1048; neutralizing fumes in smelter gases (Murray) P 1170; siphoning (Nagelschmidt) P 1231; as desiccant (Marden) 1264; drying vessel (Berkeley) 1569; use in fields of cereals (Hitier) 1653; pptn. of P in presence of (Falk) 1725; oxonium compds. of with ethers (Chelintzev) 1749; action of conc., on acetylene compds. (Zal'kind) 1897; transportation of fuming 2295; action of $SnCl_2$ on (Durrant) 2357; removing As from (Martin) P 2488; action on strophanthus seed (Buldoni) 2792; substitute in soap and fat ind. (G.) 2989; dissolution of Ni in (Reichinstein) 3019; Brit

works 3332; (Taylor) P 3335; purifying C_6H_6 with (Koppers) P 3353.

Sulfuric acid, analysis (Ledoux) 184; detn. of As, Fe and Hg in (Nissenson) 278; in mine waters (Cappo) 770; in K salts (Vaubel) 1730.

Sulfuric acid, manufacture, condensing app. (Mason) 514; tower systems (Schliebs) 514; Pb-chamber process (Wentzki) 515; (Düron) 848; concentrators (Kausch) 955; effect of war on Ger. (Reusch) 1372; fused silica dishes for concn. (Marshall) 1372; app. for (Kausch) 1372; 100-ton chamber process plant (Mathewson) 1452; impurities of metallurgical chamber acid (Hoffman) 3200; proposed new method of (Waggaman) 3331; *Patents:* Pb-chamber app. (Gen. Elec. Co.) 132 (Nemes) 1100 (Krantz) 2439; concg. (Carmichael) 132 (Bithell) (Beck) 1229 (Bermutat) 1834; (Meigs) 357; plant (Hartmann Ges.) 358 (Mackenzie) 360; regulating d. of (Santa) 360; Pb-chamber manuf. (Torand) 699; (Hoefling) 850; (Bithell) P 1536; (Littmann) 1538, 1981; (Hoefling) 1538; (Hunnybun) P 1672; recovering from pickle liquor (Howl) 2297; (Lutjens) 2434; (Hartmann) 2437; (Pintsch) 2441; continuous evapn. (Brünler) 2577; (Howard) (Schliebs) 2798; (Bambach) 2804; app. for catalytic (Brockbank) 3335; see also *Sulfur trioxide.*

Sulfur ores, ind. in Norway 585.

Sulfurous acid, reaction of *p*-benzoquinone with (Dodgson) 206; reduction of (Griesheim-Elek.) P 518 (Chem. Fab. G.-E.) P 1832; absorption spectra of (Wright) 749; action of, on sugar juices (Janak) 868; stability of aq. (Förster) 1821; action of $SnCl_2$ on (Durrant) 2357; basic Al salts of CH_3O- (Bleckwenn) P 2795; extinction measurements of solns. of (Garrett) 3165; see also *Sulfur dioxide.*

Sulfur trioxide (Bayer & Co.) P 131; detg. free in leather (Paessler) 252, 977; (Naamlooze, etc.) P 361; in S oven gases (Pellet) 532; loss of, in incineration (O'Sullivan) 573; (Bayer & Co.) P 1537; (Badische) P 2574; (Cantilena) P 2700.

Sulfuryl chloride in alkylation of phenols (Smyth) 608; thermodynamics of equil. (Trautz) 3008.

Sumac, ind. in Sicily (Ascione) 2607.

Sun, reproducing temp. (Lux) 562 (Lummer, book) 143, 562.

Sunflower, glucoside in (Zanotti) 1483.

Sunlight. See *Light.*

Super-conductors, imitating permanent magnet by (Onnes) 545.

Superfused state, matter in (Nasini) 169.

Superheaters, Their Heating Power and Efficiency (Smith, book) 1241.

Superphosphates, total H_3PO_4 in (Peters) 347; (Willson) P 1220; emptying dens (Bakema) P 1654; sifter and comminutor (Akt.-Ges. Chem. Prod. Fabr.) P 1708; cutting (Pfaul) P 2420; concg. (Gabbiati) 2133; crushing and transporting (Bakema) P 2576; see also *Calcium phosphate; Fertilizers, phosphorus.*

Supersaturation theory (Jones) 9, 876.

Supertension (Crabtree) 409.

Supracapsuline. See *Epinephrine.*

Suprarenal capsules or glands. See *Adrenal glands.*

Suprarenaline. See *Epinephrine.*

1993; removing, from gas (Steere) 1108 (Smith) 1840 (Moore) 1992 (Otto & Co.) 3125 (Soc. d'Exploitation) 3354; receivers (Schüler) 1388; (Hargreaves) 1673; drying and mixing, macadam (Taylor) 1680; separator (Berlin-Anhalt., etc.) 2146; filters (Rhodes) 2307; sepg. bells (Berlin, etc.) 2449; macadam (Parkinson) 3347; extg., from distn. gas (Tschudy) 3352.

Tar products, Japanese by-products ind. (Inubishi) 1241; Dyestuffs and.: Their Manuf., Properties, Tests and History—Their Chem., Manuf. and Application (Beacall, *et al.*, books) 1549; extn. of PhOH from tar distillate (Mason) 1684; Kubierschky system of distn. (Borrmann) 1684; in U. S. (Porter) 1839; in explosives (Storm) 1844; export of German, to U. S. (Pietrusky) 1845; Dyestuffs and (book) 1996; satd. hydrocarbons from vacuum tar (Pictet) 2058; gasification of tar (Wyatt) 2305; preheater for tar distn. (Kuroda) 2305; distg. plant of Nürnberg gas works (Terhaerst) 2809; distn. (Giua) 3361. *Patents:* Distn. of tar (Keller B. A.-G.) 144 (Raschig) 147, 1977 (Boormann) 2144; fungicidal and insecticidal properties of N bases from tar (Chem. Fab. Nördlinger) 503; hydrocarbons from (Melamid) 712; low boiling products of, distn. (Melamid) 963; still (Crossley) 1707; sepg. constituents of coal tar (Davies) 2585.

Targets, X-ray (Coolidge) P 3027, 3171.

Tarnish, removing from Ag (Keyt) P 1009; preventing, of Ag, etc. (Lounds) P 2432.

Tar oils, open-hearth furnace fired with (Ring) 430; washing (Pepper) P 711; (Markl) P 861; heating, lighting and power (Markl) P 2814.

Tarring roads (Rosen) P 3347.

Tartar, powder or paste for removing, from teeth (Wischo) P 2796.

Tartaric acid and prep. of a *l* benzaldehyde (Erlenmeyer) 58; transformation into AcH (Neuberg) 59; and fermentation of sugar (Neuberg) 472; toxicitity of Na salt (Salant) 485; alleged activation of BzH by *d*- (Wedekind) 629; *l*-menthylamine salts (Patterson) 1038; modification during fusion (Bruhat) 2046; conversion of racemic into mixt. of racemic and *d*-, by means of *l*-malic acid (McKenzie) 2223; stable mixts. of Na perborate with (Chem. Werke Kirchhoff, etc.) P 2577; rotatory powers of tartrates of *d*- and *l*-isoamarine (Snape) 2892; bisanisylidenedimethylpyrone salt (Boon) 2893; polarization (Gore) 3105; titration with $KMnO_4$ (Dean) 3189; complex rotatory dispersion of Et and Me esters (Lowry) 3225; pharmacology of Na salt of (Salant) 107.

Tartaric acid, analysis in beverages (Häussler) 117; in foods (Häussler) 338; (Percia-bosco) 900; in alc. drinks (Astruc) 1655; in wines (Kling) 1655.

Tartrates, influence on isolated heart (Salant) 1807; adulteration (Carles) 2561.

Tartronic acid prep. (v. Friedrichs) 319; oxidation of tetrahydroxybiphenyl to (v. Friedrichs) 1051-2.

Taste, chem. constitution and (Cohn) 464, 937; of hard water (Friedmann) 675; removing bitter, and burnt, from malt exts. and worts (Cantor) P 2285.

Tautomerism. See *Isomerism.*

Taxus cuspidata (Ueda) 623.

Tea, from Asia Minor (Hanausek) 940; exts. of (Schmidt) P 1081; from new sources 1205; mate (Brieger) 1640; max. stem content standard for (Besson) 1641; heather (Schneider) 1945; drying (Davidson) P 2275.

Teaching. See *Education.*

Technical chemistry. See *Chemical industry; Chemistry.*

Teeth, use of bad Au alloy in filling for (Harnack) 89; Ca in (Morgulis) 478 (Simonini) 1501; effects of acid on (Lothrop) 632; hardness of water and (Rose) 2098; powder or paste for removing tartar from (Wischo) P 2796; dental models (Nielson) P 2800; oral bacteria in relation to (Gies) 3094; biol. test for As in (Prinz) 3266; internal secretions in their relation to development and condition of (Gies) 3282; germicidal efficiency of dental cements (Poetschke) 3289; production of dental caries (Hopewell-Smith) 3291; dental medicines (Prinz) 3299; dental amalgams (Atkinson) (McBain) 3300.

Telegraphy, wireless (Langmuir) 2036, sensitiveness of crystal detectors for wireless (Guirgea) 3000.

Telephony, line protection (Schroetter) 2035; wireless (Langmuir) 2036.

Tellurides, m. and b. ps. of minerals (Borgström) 2364; double salts of Hg with aromatic (Lederer) 3241.

"Tellurite reaction" (Davis) 923, 1493

Tellurium, in Na Ca silicate glasses (Fenaroli) 1539; pressure and elec. cond. of (Beckmann) 2026; Ueber das Atomgewicht des Tellurs und seine Beziehung zu den Gruppenhomologen (Pellini, book) 2836.

Tellurium, analysis (Browning) 3041

Tellurium alloys, Hall effect in, with Bi (Trabacchi) 2183; Hall effect in (Trabacchi) 3019.

Tellurium compounds, analytical reactions of (Denigès) 1287.

Tellurium dihalides, action of PhMgBr on (Lederer) 3235.

Tellurium ethers, Pt compds. with (Fritzman) 2491.

Temperature, reduction of gas. vol. to normal (Wendriner) 12; Temperatur und Lebensvorgänge (Kanitz, book) 91; influence of substances raising and lowering, on thyroidectomized dogs (Karelkin) 104; effect in formation of marcasite and wurtzite (Allen) (Merwin) 187; and epinephrine glucosuria (Nardelli) 223; and pyroelec. excitations

1,1,4,4 - Tetramethyl - 2 - cyclohexanone and semicarbazone (v. Auwers) 2871–2.
β,ζ,ζ,ι - Tetramethyldecan - ϵ - one (Parry) 1038.
p,p' - Tetramethyldiaminodibenzyl sulfone and dervis. (Binz) 2536.
Tetramethyldiaminodiphenylmethane (Neundlinger) 2872.
Tetramethyldiaminodiphenylnitrosoamine (Wieland) 2537.
p_3 - Tetramethyldiaminodiphenyl - α - pyridylmethane and derivs. (Harries) 2880.
Tetramethyldiaminodiphenylthiotonyl methane and corresponding carbinol (Vlastelitza) 1750.
Tetramethyldiethylpyrranthranol (Piloty) 457.
Tetramethyldiethylpyrranthraquinone (Piloty) 457.
2 - (α,α') - Tetramethyldipyrrylmethane and salts (Piloty) 82.
2 - (α,β') - Tetramethyldipyrrylmethane - 2-β-dicarboxylic acid, di-Et ester, etc. (Piloty) 83.
Tetramethylenedicarbamic acid, di-Et ester (Curtius) 1606.
Tetramethylenediguanidine and salts (Kizel) 2897.
Tetramethylene d peroxide-dicarbamide (von Girsewald) 77.
Tetramethyleneglycol homologs of (Longinov) 1899.
Tetramethylgluconolactone (Irvine) 1908.
Tetramethyl-γ-glucose (Irvine) 1908.
***N* - *gem* - Tetramethylhippuric acids** and nitriles (Immendörfer) 1914.
***N* - *gem* - Tetramethylhippurylmalonic acids**, di-Me esters (Immendörfer) 1914.
Tetramethylisopropylpyrrolenine and salts (Plancher) 1478.
1,3,4,6 - Tetramethylmercaptobenzene and dipicryl deriv. (Schadler) 911.
Tetramethyl - γ - methylglucoside (Irvine) 1907.
2,4,4,6 - Tetramethylpentoxazole and picrate (Gabriel) 2876.
Tetramethylpyrranthranol (Piloty) 456.
Tetramethylpyrranthrone (Piloty) 457.
Tetramethylsorbitol (Irvine) 1908.
α,α' - Tetramethyltetramethylene oxide (Weinhagen) 2232.
Tetramethyltetraminodibenzyl sulfone (Binz) 2536.
Tetramic acids (Gabriel) 322.
3,4,3',4' - Tetraminobenzophenone (Montagne) 2533.
Tetramminoferrous sulfate (Spacu) 180.
Tetranickel triarsenide (Palmer) 44.
Tetranitroaniline (Verona Chem. Co.) 1391.
4,4',3,3' - Tetranitro - 1,1' - anthrimide (Eckert) 601.
Tetranitrobenzophenazoxine (Kehrmann) 627.
Tetranitro - 6,6' - dicarbomethoxytetraphenylhydrazine (Kenner) 606.
Tetranitrodimesitylmethane and oxime (Wenzel) 599.
Tetranitrodipseudocumyl ketoxime and -Br$_2$ deriv. (Wenzel) 599.
Tetranitroluteolin tetraethyl ether (Perkin) 1311.
Tetranitromethane, coloration produced by (Harper) 1037; as reagent for structure (Filipov) 1901; action with compds. having residual affinity (Harper) 610.
Tetranitromethylaniline (Glua) 3362.
Tetraoxalodioldichromiates (Werner) 37.
1,1,6,6 - Tetraphenylhexane (Bouvet) 2640.
1,1,6,6 - Tetraphenylhexane - 1,6 - diene (Bouvet) 2639.
1,1,6,6 - Tetraphenyl - 1,6 - hexanediol (Bouvet) 2639.
1,2,3,4 - Tetraphenylhydroxyguanidine and salts (Ley) 315.
Tetraphenylphthalane (Schlenk) 1918.
Tetraphenyl - *o* - xylyleneglycol (Schlenk) 1918.
Tetrapropylhexanediol (Bouvet) 2639.

(Briscoe) 984; statistics (Hess) 1024; cleaning, plates (Reynard) P 1455 (Moore) P 1559; plates (Thomas) P 1456; action on water (Jorissen) 1597 (Isnardi) 3211; treatment of waste waters from, mines (Kershaw) 1957; lacquered, plate (Miyazaki) P 2601; detn. of Cu in presence of (Coltman) 2747; tinning Al (Roy) P 2870; m. p. (Kaye) 3161; fusible, boiler plugs (Burgess) 3210; coating metal plates with (Taylor) P 3217; toxicity of (Salant) 3297; Brit., works 3332.

Tin, analysis, elec. pptn. (Humphreville) 185; sepn. of Cu and Pb from (McCay) 277; detection (Pertusi) 572; in alloys (Stief) 898; sepn. of Pd and Sn (Gutbier) 1726, 1727; sepn. from As and Sb (Hahn) 2747.

Tin, metallurgy of, detinning, scrap (Weber) (Linde) P 50 (Goldschmidt) P 1585, 3216; (Billiton Maatschappy) P 290; (Martin) P 430; electrolytic refining (Michaud) P 562 (Whitehead) P 3176; electrolytic recovery (Michaud) P 564 (Battle) P 3177; (Rueb) P 590; extg., from alloys or mixts. (Spitz) P 1027; furnace for (Gebr. Karges) P 1300; (Hills) P 1744; (Richards) P 2505; detinning plate (Losner geb. Dietsch) P 2506 (Chem. Fab. v. d. Linde) P 2761.

Tin alloys, with Mn and Cu (Heusler) 193; phosphor-Sn (Vickers) 587; Lagermetalle, Antimon - Blei - Zinn - Legierungen (Heyn, Bauer, book) 906; magnetic measurements on Heusler's Sn-Mn bronzes (Take) 1146; adding phosphor-Sn to molten Al (Naylor) P 1170; (Wilkins) P 1298; constitution of Cu alloys with (Haughton) 1597; with Pb and Sb (Bauer) 3203; Cu-Sn-Zn (Hoyt) 3205; see also *Bronze.*

Tin chlorides, double salts of $SnCl_2$ and KCl (Fujimura) 1284; action of $SnCl_2$ on H_2SO_4 and H_2SO_3 (Durrant) 2357.

Tin compounds of cyclohexane (Grüttner) 804.

Tinctures (Wilbert) 512; MeOH in pharm. (Franceschi) 952; preventing pptn. of, by water (Simon) 2421; in therapeutics (Pescitelli) 2794.

Tin deposits, red feldspar of Bushveld (McDonald) 1160; of Tasmania (Noelting) 2861.

Tin group, analysis (Gilmour) 1725.

Tin ores, from Island of Flores (Wichman) 580; concn. (Simmons) 1594.

Tin oxides, pure SnO_2 (Spitz) P 237; reaction between SnO_2 and CoO (Hedvall) 2844; Ueber die Reaktionen zwischen Zinndioxyd und Kobaltoxydul bei höheren Temperaturen (Hedvall, book) 2853.

Tin-plating, Industry (Jones, book) 49; machines (Krämer) 905; waste liquors (Kershaw) 1211.

Tin sulfides, Sn_2S (Epprecht) 2357.

Tinting, paper, pulp, textiles (Aflenzer, etc.) P 2590.

Tiqui-tiqui (Albert) 2929.

Tires, mixt. for vehicle (Guidry) P 163; sealing punctures (Seely) P 163 (Cruse) P 1859 (van Valkenburg) P 2327; comp. (Monnot) P 164; coating metal fabrics of pneumatic (Brandenburger) P 536; filler (Oliver) P 731; comp. for repairing (Butlin) P 872; (Baker) P 1135 (Halsall) P 1260; furnace for heating metal (Lincoln) P 1027; inner tubes of pneumatic (Clare) (Savage) P 1704; vulcanizing rubber pneumatic (Miller) P 2007; fabrics for pneumatic (Bright) P 2163.

Tissue, animal, reducing endo-enzyme in (Harris) 89, 2659; absorption of granulation

Digitized by Google

tissue (Hirsch) 106; fixation of poisons by (Haye) 225; microchem. test for O place in (Drury) 326; sp. precipitins in art. (Przygode) 334; effect of exts. of, on adult mammalian cells (Walton) 465; effect of gentian violet on (Russell) 465; elec. cond. in (Osterhout) 466; vital staining (Höber) 467; destruction of cell structure and oxidation in (Battelli) 635; lipoids of, and nutrition (Terroine) 645; variations in, during starvation (Mayer) 645; lipoids in (Mayer) (Terroine) 647 (Mayer) 648; resistance to proteolytic enzymes (Laugenskiöld) 649; Physikalische Chemie der Zelle und der Gewebe (Höber, book) 919; elasticity of living (Golowinski) 937; self-digestion of living (Best) 1186; chem. environment and life and growth (Loeb) 1193; cellular reactions by cholesterol in (Stewart) 1198; adipose necrosis of peripancreatic (Verdozzi) 1348; I and growth of, *in vitro* (Pitini) 1349; rate of penetration of marine, by alkali (Harvey) 1350; F in (Gautier) 1361; cholesterol in (Lander) 1632; cultivation of human, *in vitro* (Losee) 1636; ester-splitting faculty of normal (Quinan) 1637; radioactive susbstances for destroying living (Hertwig) 1507; extn. of creatine and creatinine from (Costantino) 1792; Ueber den mikroskopischen Nachweis v. Oxydase in Gewebeschnitten m. e. Anh. über Vitalfärbung (Kriegbaum, book) 1928; action of bacterial filtrates on (Bittrolff) 1935; detg. inorg. P in (Costantino) 2100; detg. hippuric and benzoic acids in (Kingsbury) 2259; fibrinolysins (Fleisher) 2390; relation between creatine and creatinine in autolyzing (Myers) 2662; of fasting animals (Morgulis) 2664; enzyme action (Morse) 2768; fibrin reaction occurring in living cultures of frog (Baitsell) 2905; fermentative activity of organ, after pancreatectomy (Stawraki) 2907; physiology of living matter (Heilbronn) 2924; action of aseptic, on glucosone (Levene) 3073; I in tuberculous (Lewis) 3091; reaction of, to antigen stimulation (Coca) 3092; conduction and excitation in (Lillie) 3257; chemotactic action of, exts. (Dold) 3288; appearance of protective enzymes after parenteral administration of peptone prepd. from kidney (Bassani) 3289; atrophy and acceleration of, enzyme action (Morse) 3293; see also *Respiration*.

Tissue, plant, carboniferous (Barbour) 904; extn. of diastases from (Thatcher) 918; oxidases of acid (Reed) 1071; killing, by low temp. (Chandler) 1344; action of KCN in (Moore) 2661; distribution of invertin in, of beets (Colin) 3085.

Tissue fluid, substances with inflammatory action in (Dold) 1194; compn. of, in normal and nephritic animals (Boycott) 2105.

Titanite (Bianchi) 575; He in (Magli) 1005.

Titanium, effects on steel (Fitzgerald) 433 (Comstock) 778; production (Hess) 1024; behavior of phenols, etc., toward quadrivalent (Hauser) 1180; displacements in spectral lines of (Morrow) 1578; and titaniferous ores (Berggreen) 1740.

Titanium, analysis (Moistad) 422.

Titanium alloys, Fe–Ti–Al (Goldschmidt) P 1456; bronze 3205.

Titanium chlorides, $TiCl_3$ in qual. analysis (Monnier) 768; Fe detn. in water with $TiCl_3$ (Zink) 1357; transformation of $TiCl_3$ in aq. soln. (Heydweiller) 1570; $TiCl_3$ in detg. oxides of Pb and Mn (Moser) 1726; action of $TiCl_4$ on org. O compds. (Rosenheim) 1773; magnetic rotation in (Siertsema) 3165.

Titanium compounds (Farup) P 362; from material contg. Ti and Fe (Farup) P 3121.

Titanium deposits, geology of, of Virginia (Watson) 2861.

Titanium ores, in blast furnace (Core) 46.

Titanium oxides, titaniferous Fe ores (Farup) P 3214; pigment contg. (Barton) P 3369.

Titani-urea iodide (Barbieri) 2852.

Titani-urea perchlorate (Barbieri) 2852.

Titration. See *Analysis*.

Toadstools, discoloration of (Ven. Arnhem.) 3269.

Tobacco, fertilizer expts. (Mathewson) (Anderson) 348; blue mold in (Smith) 348; curing (Garner) 511 (Bernardini) 2792; technology of (Spallino) 513; fertilizers (Tricheresa) 838; and nicotine (Florent) 949; mosaic disease of (Allard) 1190; compn. of, plant (Pannain) 1224; analysis (Thurston) 1366; effect of shading on transpiration and assimilation of, plant in Cuba (Hasselbring) 1629; alkaloids in, ext. (Noga) 1769; nicotine in Hungarian Cserbl (Toth) 2126; protein and nicotine content of, plant during growth (Rasmussen) 2925; Textbook on (Werner, book) 2970; action of org. substances on, plants (Ciamician) 3271; detn. of nicotine in (Rasmussen) 3326; extg. nicotine from, dust (Mewborne) P 3330; bleaching (Delling) P 3340.

Tolerance, non-specificity of carbohydrate, tests (Friedman) 98.

Tolubalsam, Colombian (Wielan) 2126.

Toluene, bromination (Le Blanc) 294 (Ducelliez) 787 (Cohen) 2895; ternary mixts. of CCl_4, $C_2H_4Br_2$ and (Rosanoff) 402 detg., in com. "toluol" (Colman) 962 (Northall-Laurie) 3044; recovery 1106, 2584; test for, in C_6H_6 1107; detg. naphtha (Colman) 1545; surface tension (Richards) 2025.

Toluenesazo-*o*-cresol and benzoate (McPherson) 1330.

***o*-Toluenesazo-*α*-naphthalenesazo-*β*-naphthylamine** (Jacobs) 2073.

***p*-Toluenesazophenyl benzoate** (McPherson) 1330.

***p*-Toluenesazothymol** and benzoate (McPherson) 1330.

***o*-Toluenesazo-*o*-toluenesazo-*β*-naphthylamine** and chloroacetyl deriv. (Jacobs) 2073.

Triazoles, new prep. (Brunner) 3058.

Triazolone, Ba salt (Lifschitz) 1614.

Triazosulfole, constitution (Oliveri-Mandalà) 71.

Tribasic acids. See *Acids*.

Tribenzoin (Balbiano) 67.

Tribenzoylbaptisol (Clark) 2773.

Tribenzylammonium hexabromoösmiate (Gutbier) 1439.

Tribenzylammonium hexachloroösmiate (Gutbier) 1440.

Tribenzylammonium hexachloroiridate (Gutbier) 1439.

Tribenzylidenetriaminoguanidine and salts (Pellizzari) 450.

Triboluminescence. See *Luminescence*.

2,4,6-Tribromoacetophenone (Fuchs) 1464.

2,4,6-Tribromochloroacetylaniline (Jacobs) 2073.

Tribromo-*p*-cresoxyethyl bromide and deriv. (Jacobs) 2076.

Tribromo-*p*-cresyl, ester of (Jacobs) 2077.

4',3,5-Tribromo - 4 - hydroxyazoxybenzene (Angeli) 617.

Tribromoisopentane, action of Mg on (Krestinskii) 1897.

Tribromo - *p* - methylphenoxyethyl bromide and -piperidine-HBr (Jacobs) 2076.

Tribromophenylglyoxylic acid (Fuchs) 1464.

Tribromotriacetylcyclohexanetriol (Griffin) 2091.

Tri-*i*-butylammonium hexabromoösmiate (Gutbier) 1439.

Tri-*i*-butylammonium hexachloroösmiate (Gutbier) 1440.

Tri-*i*-butylammonium hexachloroiridates (Gutbier) 1439.

Tri - *i* - butylammonium hexachlororuthenate (Gutbier) 2196.

Tri-*i*-butylammonium pentachlororuthenate (Gutbier) 2196.

Tributyrinase of serum (Pietri) 1338.

Tricalcocasein 954.

Trichilia, seeds of (Ammann) 1697.

Trichlorin 955.

Trichloroacetic acid, hexamethylenetetrammonium salt (Vanino) 121; NH_4 salt (Bateman) 454; addition compds. of (Kendall) 908; reaction of amylene with (Timotheev) 2896; system with dimethylpyrone (Plotnikov) 3050.

Trichloroacetoxyisobutyric acid and chloride etc. (Blaise) 787.

Trichloroacrylic acid and derivs. (Böeseken) 2382.

Trichlorocholic acid, Et ester (Moreschi) 797.

Trichloroethylene, solvent for rubber (Hildebrand) P 872; solubility of substances in (Wester) 876.

3,5,7-Trichloroindazole (Kenner) 606.

Digitized by Google

Trichlorolactic acid, imido ether and its -HCl (Kötz) 208.
Trichloromercuri compounds of the pyrazolone series (Schrauth) 304.
Trichloromethyl - *R* - carbinols, cleavage (Kötz) 207.
2,4,6 - Trichlorophenoxyethyl bromide and derivs. (Jacobs) 2076.
3,5,7 - Trichloro - 2 - phenylindazole (Kenner) 606.
Tricresol, toxicity of (Fitzpatrick) 3302.
Tricyclohexylbismuth (Grüttner) 804.
Tricyclohexyltin chloride (Grüttner) 804.
Tridens (Alsberg) 2773.
Triethylammonium hexabromoösmiate (Gutbier) 1439.
Triethylammonium hexabromoselenate (Gutbier) 1436.
Triethylammonium hexachloroösmiate (Gutbier) 1440.
Triethylammonium pentachlororutheniate (Gutbier) 2196.
Tri-9-ethylcarbazyldiphthalide (Copisarow) 2520.
Triethylcyclohexylmethane (Halse) 3232.
Triethylphosphine dichloride (Collie) 1469.
Triethylphosphine oxide, removal of O from (Collie) 1469.
Trigonocephalus blomhoffi, chem. constituents of (Suguro) 664.
1,2,4 - Trihydroxyanthraquinone - 3 - carboxylic acid (Bayer & Co.) P 847.
4,6-β-Trihydroxycoumarin and derivs. (Leuchs) 1061.
1,2,10 - Trihydroxy - 5 - keto - 10 - ethyldihydroanthracene (Sirker) 3231.
2,7,?-Trihydroxyphenanthraquinone and triacetate (Mukerjee) 609.
Triketohydrindene hydrate. See *Ninhydrin*.
Triketohydrindene reaction (Neuberg) 470.
1,2,4-Trimercaptobenzene methyl ether and derivs. (Wienerberger) 910.
1,2,4-Trimercaptobenzene trimethyl ether (Weinerberger) 910.
Trimesic acid, derivs. (Curtius) 1609.
3,5,7-Trimethoxycoumarin (Willstätter) 787.
3,4',5' - Trimethoxy - 2,3 - indeno - 1, 4-benzopyranolanhydroferrichloride (Perkin) 200.
3,4,5 - Trimethoxyphenanthrene - 3 - carboxylic acid (Klee) 300.
Trimethoxyphenyl methylenedioxystyryl ketones and Ph hydrazone (Harding) 603.
3,4,5 - Trimethoxy - 3 - vinylphenanthrene (Klee) 300.
Trimethylamine, derivs. (Herzmann) P 390.
Trimethyl - β - aminoethylammonium hydroxide and chloroaurate (Ewins) 295.
Trimethylammonium hexabromoösmiate (Gutbier) 1439
Trimethylammonium pentachlororutheniate (Gutbier) 2196.
2,4,4-Trimethylbenzopyrane (Dianin) 1904.
Trimethylbenzoylformic acid, Me ester (Wenzel) 599.
1,1,4 - Trimethyl - 4 - bromocyclohexane (v. Auwers) 2871.
2,3,5 - Trimethylcoumarilic acid (Jordan) 1605.
4,5,7 - Trimethylcoumarin - 3 - carboxylic acid, Ag salt (Jordan) 1604.
4,5,7 - Trimethylcoumarin - 6,3- dicarboxylic acid, Et ester (Jordan) 1604.
β-4,6-Trimethylcoumarinic acid (Jordan) 1604.
Trimethylcresorcinolphthalein hydroxide and salts (Kehrmann) 325.
Trimethyl - β - cyanoethylammonium hydroxide and salts (Ewins) 295.
1,1,2 - Trimethylcyclohexanediols and dibenzoate (Crossley) 2225; (Uspenskii) 2512.
Trimethylcyclohexenes and nitrosochlorides (v. Auwers) 2547, 2871; and derivs. (v. Auwers) 2871.
Trimethylcyclohexylmethane (Halse) 3232.
Trimethylcyclopentanone and derivs. (Wallach) 1458.
Trimethylcyclopentenone and semicarbazone (Wallach) 1458.
Trimethylenebis - [α - imino acids] (Shlezinger) 3053.
Trimethylenediamine, formation of propionaldehyde and acetone from (Neuberg) 3058–9.
Trimethylene glycol, formation of propionaldehyde and acetone from (Neuberg) 3058–9.
Trimethylenetetrasine (Müller) 320.
Trimethylethylene, transformation into trimethylcyclopentenone (Wallach) 1458.
Trimethylethylmethane, from pinacolin (Khkner) 3051.
α-Trimethylglucose (Denham) 203.
α, α, δ-Trimethylhexoic acid (Parry) 1038.
Trimethylhippuronitrile (Gabriel) 313.
1,1,3 - Trimethyl - 3 - [γ - hydroxybutyl]hexahydrobenzene and acetate (Skita) 3250.
2,4,4 - Trimethyl - 2 - hydroxyphenyl - 2,3 - dihydrobenzopyrane and derivs. (Dianin) 1903–4.
Trimethylindamine (Wieland) 2538.
Trimethylisopropylpyrrolenine and picrate (Plancher) 1478.
1,1,3 - Trimethyl - 5 - keto - 6 - acetylcyclohexene and derivs. (Scheiber) 1183.
Trimethylmethyldioxytriazine and derivs. (Bougault) 1174.
Trimethyloxy-γ-methylglucoside (Irvine) 1908; monoacetone (Irvine) 1908.
2,4,6-Trimethylphenacyl bromide (Jacobs) 2077.
4,4,6 - Trimethyl - 2 - phenylpentenazole and derivs. (Gabriel) 2876.
1,4,6 - Trimethyl - 2 - pyridone -3- carboxylic acid and salts (Simonsen) 2517.
Trimethylpyrrolenine, picrate (Plancher) 1478
2,3,5 - Trimethyl - 4,6,2',4' - tetranitrodiphenyl sulfide (Huender) 1762.
3,4,6 - Trimethyl - 2 - thio - 2,3 - dihydropyrimidine and -HCl (Hale) 1065.
Trinitrides. See *Azides*.

Tuyères, punching app. (Baggaley) P 1455.

T wave of human electrocardiogram (Cohn) 2109.

Twine (Burton) P 155; waterproofing and protecting from insects (Landsberger) P 864.

Twitchell reagent, decomp. of fats and oils into glycerol and fatty acid by (Wilmart) 250.

Tyndall effect, measurements in monochromatic light (Mecklenburg) 742; (Wilke) 1711; relation between, and size of particles of colloidal solns. (Mecklenburg) 2831.

Tyndall-meter (Mecklenburg) 2; (Bugge) 982.

Type, matrix for forming fac-similes of set (Aylsworth) P 2296.

Type metal, electroanalysis of (Compagno) 1589.

Typhoid bacilli. See *Bacillus, typhosus.*

Typhoid fever, immunization (Gay) 333; respiration calorimeter in (Du Bois) 646; agglutinating action of sera after recovery from (Douges) 931; sensitized *vs.* non-sensitized typhoid bacteria (Garbat) 932; decrease in, death rate in U. S. by filtration of drinking water (Imbeaux) 1518; absorption of fat and protein in (Coleman) 1801; damages for water-borne 1953; water supply and, at Cumberland, Md. (Fowler) 1953; in Philadelphia (West) 2409; Gt. Lakes and (Clark) 2413; persistence of antibodies in blood of inoculated persons (Dreyer) 2667; immunity (Alstaedt) 2668; diagnosis of, in inoculated subjects (Dawson) 2938; water-borne epidemic at Healdsburg, Cal. 2956; production of serum against sp. (Vincent) 3078; Russo test for (Kahn) 3079; action of, antitoxin on suprarenal cells (Demetrescu) 3291; immunized milk in (Rosenberg) 3294.

Typhus exanthematicus (Delta) 2399.

Tyramine, physiol. effect (Vanysek) 662.

Tyrosinase for detg. protein decomp. (Breslauer) 920; action of CO_2 on,—production of BzH by (Chodat) 2099; in skins of vertebrates (Onslow) 3069.

Tyrosine, assimilation by plants of N in form of (Petrov) 682; Hg compds. of (Hoffmann) P 1371; active Me derivs. of (Fischer) 1483; new synthesis of *o*- (Johnson) 2528; in demonstration of origin of living organisms (Bastian) 3075.

Tyrosine bisazobenzenearsonic acid (Pauly) 2905.

***o*-Tyrosinehydantoin** and -HCl (Johnson) 2528.

Ulcers, production by injections of epinephrine and by extirpation of adrenals (Friedman) 3289.

Ultrafilter, living protoplasm as (Kluyver) 3254.

Ultrafiltration, collodion membranes for (Walpole) 3253; detection and concn. of antigens by (Glenny) 3262.

Ultramarine, review (Bock) 1999; constitution of (Rohland) 2987.

Ultramicroscope. See *Microscope.*

Ultraviolet light. See *Light, ultraviolet.*

Ulva lactuca, source of combined N for (Foster) 1071.

***d*-*β*-Undecanol**, benzoate and naphthoates (Kenyon) 1036.

Undecatrione (Harries) 253.

Undecatrioxime and derivs. (Harries) 253.

Undecoic acid, nonanyl and methylbenzylcarbinyl esters (Kenyon) 64; 1-naphthylhexylcarbinyl ester (Kenyon) 293.

Unhairing skins (van Osselaer) P 1857 (Helfrich) 2325 (Vidal) P 3144.

Unions, standard specification for Cu 586; British Standard Specifications for Cu-Alloy Three Piece (book) 1026.

Units, A. E. F. (Strecker) 16; of wts. and measures 16; aerologic (Richards) 17; fundamental elec. (Smith) 556; substitute for kilowatt-hour (Wallis) 754.

Unit-stere theory (LeBas) (Vanstone) 261.

Unna methods for establishing the oxidizing and reducing regions (Schneider) 1188.

Unsaponifiable matter, optical behavior of stearin-free, of fats (Berg) 249; detg. (Rather) 388; in muscle of mammals (Costantino) 818; detg. in boiled linseed oil (Baránу) 969; in greases (Twitchell) 974.

Unsaturated compounds, *α*-halo derivs. of *α*,*α*′-ketones (Heilthaler) 56; behavior toward P and O (Willstätter) 308; metal additions in liquid NH_3 (Schlubach) 1015; oxidation of Me groups of open-chain (Merezhkovskii) 1903; addn. products of picric and nitric acids with (Reddelien) 1910; action of NO derivs. on (Alessandri) 2240.

Uracil-4-aldehyde (Johnson) 2656.

Uranium, culture of *A. niger*, *Sterigmatocystis nigra* in media contg. (Javillier) 924; production (Hess) 1271; at. wt. (Hönigschmid) 1271; as catalyzer in synthesis of NH_3 (Haber) 2620; Ra-, ratio in carnotites (Lind) 2836; relation between, and Ra (Soddy) 2837; see also *Nephritis.*

Uranium, analysis (Newton) 2041.

Digitized by Google

Uranium borate, rubber latex prepd. with 2466.
Uranium-cerium-blue and nature of constitutive coloring (Hofmann) 1015.
Uranium nitrate, diet and nephritis caused by (Opie) 646; response of animals to (MacNider) 3302.
Uranium ore (Grossmann) 774; extn. of Ra from uranium minerals (Ebler) 1147; analysis of U pitch-blendes (Becker) 2485.
Uranium oxides, reduction of U_3O_8 (Rideal) 571; magnetizability of (Wedekind) 1268.
Uranyl ammonium chloride, polarized fluorescence of (Nichols) 3020.
Uranyl chloride compd with bisdimethylchromone (Simonis) 3251.
Uranyl nitrate, hydrates of (Forcrand) 1882.
Uranyl salts, fluorescence under X-rays (Wick) 2186; fluorescence of solns. (Howes) 2734.
Urasoles (Esslinger) 597.
Urea, symmetrically substituted (Sonn) 76; of blood (Tileston) 332; dissolving NaCl in, solns. (Schnorr) 574; formation in liver (Leschke) 636 (Van Slyke) 3276; in hepatic disease (Farr) 655; of naphthalene series (Bayer & Co.) P 1096; content of cerebrospinal fluid with atrophy of infants (Nobécourt) 1200; action on esters of unsatd. acids (Philippi) 1302; double halides of quinine and (Golubev) 1470; in spinal fluid and blood (Cullen) 1635; relation of cyanamide to (Werner) 2514; behavior toward Ac_2O (Kohmann) 2654; liver and, formation from amino acids (Jansen) 2662; significance of distribution in body (Davis) 2777; formation of biuret from, and cyanic acid (Werner) 2894; numerical laws governing rate of excretion in man (McLean) 2928, 2946; predominance of liver in formation of (Taylor) 2931; soly. in ether (Gortner) 3080; N sparing action (Grafe) 3279.
Urea, analysis, in blood (Kristeller) 636 (Hahn) 1924 (Combe) 3266; (Rasmussen) 637; by NaBrO (Mestrezat) 1069; urease of soy bean in (Eigenberger) 1187; (Desgrez) 1491; detg. small amts. in dilu. greater than 1:1000 (Fosse) 1491; gravimetric (Fosse) 1628; xanthydrol in (Hugounenq) (Fosse) 1628; detn. by xanthydrol method (Maestro) 2911; see also *Urine, analysis*.
Urea compounds, compd. from HCHO and H_2O_2 (Girsewald) P 1830; H_2O_2 compd. (Richter) P 1830; (Bayer) P 3330
Urea nitrate as fertilizer (Wagner) 502.
Ureas, monohalogenated, and their hexamethylenetetrammonium salts (Jacobs) 2074; constitution (Werner) 2514; (Bayer & Co.) P 2697; metallic (Barbieri) 2852.
Urease activity (Van Slyke) 89 (Abderhalden) 3255; effect of H ion conc., etc. (Van Slyke) 90; in Indian seeds (Annett) 641; action of serum and of amino acids on (Jacoby) 919; of soy bean (Eigenberger) 1187; activation of soy, by human serum (Neumann) 1491; prep. and properties of soy (Jacoby) 1492; action in destruction of org. matter (Bordas) 3077; in legume nodules and other plant parts (Benjamin) 3086; stable prepn. (Jansen) 3256.
Ureidodiacetic acid, Me and Et esters (Bailey) 1332–3.
Ureines of *peri*-naphthindantrione (Calderaro) 1042.
Uremia (Reiss) 98; (Tschertkoff) 220; (Foster) 1195.
Ureometer, precision (Rodillon) 639; (Mestrezat) 1069.
Urethan(s), expts. on rabbits after removal of cerebrum—sleep-producing action of chloral hydrate and urethan (Morita) 1511; $C_{12}H_{19}O_2N$ (Kursanov) 1753; respiratory metabolism during urethan narcosis (Raeder) 1807; $C_{13}H_{17}O_2N$ (Egorov) 1898; equil. in system: C_6H_6–urethan (Pushin) 2176; monohalogenated urethans and their hexamethylenetetrammonium salts (Jacobs) 2074.
Uric acid, conc. of blood as influenced by atophan and Ra Em (Fine) 105; behavior with organ exts. (Landmann) 634; of blood and atophan—salicylic acid and excretion of (Frank) 660; formation in man (Chrom) 811; and purines (Amberg) 812; endogenous metabolism (Raiziss) 816; destruction in human being (Schittenhelm) 820; organically bound (Schittenhelm) 1067; intoxication of rabbits by (Cosentino) 1349; in nephritis (Myers) 1502; metabolism—in ox and chicken blood (Benedict) 1635; in blood of children (Liefmann) 1637; excretion with occlusion of pancreatic duct (Atchley) 1802; toxicity of (Cosentino) 1805; and gout (Daniels) 2267; diagnostic value of, detns. in blood (Folin) 2398; excretion in nephritis (Palmer) 2399; salicylates and, concn. of blood (Fine) 2402; role of digestive glands in excretion of endogenous (Mendel) 2927; soly. in alc. and in ether (Gortner) 3080; diminished power of nephritic kidney for eliminating (Fine) 3091; influence of salicylates on elimination of, from blood (Denis) 3299; colloidal solns. of Na salt of (Bechhold) 465.
Uric acid, analysis, in urine (Bernard) 328 (Ganassini) 1069 (Benedict) 1626 (Höst) 1792; in blood (Ziegler) 636 (Benedict) 1627 (Maase) 3260; nephelometric estn. in blood and urine (Graves) 2916.
Uricacidemia (Preti) 2107.
Uricolysis, influence of Br-ion on (Jappelli) 2767; relation to suboxidation (Goodridge) 3071.
Urinary tract, $(CH_2)_6N_4$ as disinfectant for (Höst) 1509; disinfectant for urethra (Höst) 1808; elimination of $(CH_2)_6N_4$ in diseases of (Corica) 2944.
Urine, sp. peptolytic enzymes in (Sagel) 92; phenolsulfonephthalein excretion in, in nephritis (Frothingham) 98; hexamethylene amine as urinary antiseptic (Levy) 335

Digitized by Google

pptn. of earth phosphates on heating (Reale) 468; "urogol" and "urogon" in (Neuberg) 479; urinary dextrin (Cammidge) 480; involution of uterus and N output of (Slemons) 481; doubly refracting lipoids in (Secchi) 483; excretion of As in, after injection of salvarsan (Irokawa) 486; toxic compds. of (Claude) 630; blood and urinary amylase (King) 633; action of Na boroformate on (Kothner) 635; diastase in (Brown) 649; diazo-reaction in atophan (Greinert) 661; lipoid substances in, sediment (Reinike) 819; elimination of ethylurethan and peronal through (Bianchi) 824; pressor bases of normal (Bain) 1075; influence of fat and carbohydrate on excretion of S in (Zeller) 1192; pseudo-levulose in (Cammidge) 1194; lactic acid in, of asphyxiated (Ishikawa) 1349; peptolytic enzymes in, of rabbits after burning or photodynamic injury (Pfeiffer) 1506; secretion (Leschke) 1802; *p*-$Me_2NC_6H_4CHO$ reaction in (Rachmilewitsch) 1804; elimination of iodide in (Amstad) 1806; analyses during a 2-week fast (Watanabe) 1931; levulose in (Justin-Mueller) 1931; N in, in pneumonia (Signorelli) 1931; diagnosis of tuberculosis (Bronfenbrenner) 1936; neutralizing power of (Quagliariello) 1923; benzoic acid in (Raiziss) 2261; MeOH in (Fellenberg) 2262; protein of nephritic (Cameron) 2266; significance of acetone derivs. in (Derham) 2668; spontaneously pptd. albumin in (Rosenblum) 2670; of patients with frozen feet (Tixier) 2776; abnormal yellow pigment in (Justin-Mueller) 2777; prep. of indican from (Schwenk) 2883; quant. collection (Folin) 2911; urinary N curves after feeding (Pepper) 2927; diazo reaction of dog,—relation to course of metabolism (Masslov) 2928; secretion of infant (Engel) 2930; spectroscopic exam. of color reactions of indole derivs. and of, of dogs after their administration (Homer) 3074; removal of acetoacetic acid from (Graham) 3080; toxicity of guinea pig—anaphylaxis (Rustis) 3093; catalase in (Kahn) 3094; enzymes in, in nephritis (Lorenzini) 3098; as nitrogenous fertilizer (Hempel) 3113; constituents of (Strickrodt) 3252; elimination of kynurenic acid in (Homer) 3272; acidity of human (Zeman) 3279; elimination of KI in (Wovschin) 3298.

Urine, analysis (Hewat, book) 92; Pb in (Parkinson) 214; decolorizing diabetic (Beckers) 215; Hg in (Klotz) 470 (Perlstein) 3260; estn. of allantoin in (Plimmer) 812; urochromogen reaction in (Balduzzi) 821 (Pulay) 3259; S reaction with cancer (Capella) 822; benzoic acid in (Raiziss) 920; reagent for bile pigments in (Travaillé) 1342; toxicological estn. of Pb in (Meillère) 1590; abnormal reaction obtained in testing with Fehling soln. (Cramer) 1627; detg. sugar in (Salkowski) 1627 (Cramer) (de Jager) 1793 (Gray) 2916 (Folin) 3264; uric acid in (Höst) 1792 (Graves) 2916; I test (Schumacher) 1923, 2548; bile pigments and hemoglobin in (Lipp) 2260; albumin in (Zoiche) (Michel) (Holt) 2392; quinine in (Nischi) 2393; acetone in (Sobel) 1927 (Engfeldt) 2100, 2548; NH_3 in (Bonnema) 2549; Ca in (Lyman) 2770; total N in (Justin-Mueller) 2772 (Meyers) 3260; xanthydrol in (Maestro) 2911; alumina cream in removal of albumin (Tracy) 2912; nephelometer for (Marshall) 2914; sulfates in (Knauer) 2915; oxyproteic acid in (von Furth) 2917, hydrosaccharimeter for (Stephan) 2917; estn. of phenol and *p*-cresol (Siegfried) 2918; lactic acid in (Schneyer) 2918; detg. acidity (Clarens) 3078; indican in (Jolles) 3081; Chemistry and Chem. Uranalysis (Amoss, book) 3259; bile salts in (Allen) 3262; phenol and its derivs. in (Folin) 3263; see also *Albumin; Sugar, analysis; Urea; Uric acid, analysis.*

Urinod poisoning (Hartman) 2401.

Urinoporphyrin and derivs. (Fischer) 2884.

Urobilin in stool (Robertson) 2267; in stool in pernicious anemia as influenced by splenectomy, transfusion and salvarsan (Robertson) 2929.

Urobilinogen, excretion of (Sieber) 3096.

Urochromogen reaction in prognosis of tuberculosis (Schäffle) 92; in urine (Balduzzi) 821 (Pulay) 3259.

Uroerythrin (Gross) 3072.

"Urogol," occurrence in urine (Neuberg) 479.

"Urogon," occurrence in urine (Neuberg) 179.

"Uroleucinic acid" (Oswald) 932

Urology (Rousselet) 3267.

Urotropine as a disinfectant for urethra (Höst) 1808; incompatibility of, with I,I benzoate and official medicaments 2690.

Urticaria, metabolism of (Rosenbloom) 927, 2664.

Uterus, action of exts. of thyroid, ovary and placenta on surviving rabbit (Fuchs) 106; involution of, and N output of urine (Slemons) 481; action of drugs on isolated 824; action of press-juice of, on hexosephosphoric acid (Hagemann) 928; lactic acid and H_3PO_4 in press-juice of (Cohn) 928; effect of pituitary on isolated human (Lieb) 3284.

Uvanite (Hess) 426.

Uveitis, anaphylactic (Fuchs) 1349.

Uzaratan 954.

Vaccination in Light of Experience (Millard, book) 328; tuberculin in (Jousset) 1805; against cholera vibrio (Vincent) 1935; I in (Scott) 1973.

Vaccines, prepg. (Fornet) P 513 (Warden) P 847 (Berthelot) 2394; unheated (Casselman) 823; typhus 953; cultures for making (Nicolle) P 1226; for foot and mouth disease (Otto) P 1226; resistance of, virus to filtration (Green) 1344; sterile (Erben des A. Jaeger) P 1370; sterilization of (Vincent) 1935 (Taylor) 2668; treatment of hay fever (Iskowitz) 2776; immunization tests with glanders

(Mohler) 3090; bacterial, in pyorrhea alveolaris (Hitchens) 3291; see also *Cholera; Typhoid fever*, etc.

Vacuum, thermionic currents in high (Lilienfeld) 17; regulating, in X-ray tubes (Snook) P 27; high (Woodrow) 173; elec., gage (Rohn) 178; fixing microscopic objects in (Wolff) 398; stopcocks (Randall) 537; in incandescent lamps (Thatcher) P 563; double-walled, vessels (Higbee) P 982; measuring high (Allgem. Elektrizitäts-G.) P 1139; app. (Brown, Boverie & Cie) P 2011; electron emission of a CaO electrode in (Germershausen) 2028; producing, in incandescent lamps (Philips' etc.) P 2038; piston pumps (Gaede) P 2332; desiccator (Bruijning) 2997; elec., furnace (Oesterheld) 3028; see also *Apparatus, distillation; Gases.*

Vacuum distillation. See *Distillation; Apparatus, distillation.*

Vacuum guard ring (Nettleton) 2345.

Vacuum jackets (Evans) P 2443.

Vacuum pan, elec. heated (Brodie) P 1707.

Vacuum pump. See *Pumps.*

Vacuum tar. See *Tar.*

Vacuum tubes, production of rare gases in (Goddard) 1874; for telephone-line protection (Schroetter) 2035; charged surface layers on electrodes of (Compton) 2732.

Vagus, muscarine poisoning and stimulation of, nerve (Raaflaub) 484; influence on pancreatic secretion (Von Anrep) 1073; effect of homatropine on (Zulick) 1203; dependence of apnea on (Githens) 1933; action of K on heart, tonus (Hering) 2935; influence of, nerve on gaseous metabolism of kidney (Pearce) 3089; see also *Nerves.*

Valence, role of, in additivity of diamagnetism (Pascal) 17; dependence on temp. (Biltz) 541; electronic conception of (Nelson) 874 (Brunel) 1263 (Fry) 1327, 2826 (Fry) 2826 (Falk) 2172; change of, of Cu (Rebenstorff) 985; of N in NH_4 salts (Noyes) 1062; of atoms and their external form (de Jongh) 1708; higher valences of O in org. compds. (Chelintzev) 1755; oscillation of indene double linkage (Courtot) 1745; of S (Lecher) 1779, 3241; residual (Ephraim) 2194, 2195; vol. theory (Barker) 2474; of central atom in complex anions of W and Mo cyanides (Rosenheim) 2743; residual, of anesthetics (Mathews) 2940; residual affinities in benzopyrones (Simonis) 3250; see also *Affinity.*

Valeraldehyde (Neuberg) 472.

Valeric acid, nonanyl ester (Kenyon) 63; methylbenzylcarbinyl ester (Kenyon) 64; 1-naphthylhexylcarbinyl ester (Kenyon) 293.

Valonia, tannins of (Bennett) 977; extn. (Balderston) 2723.

Valve, high pressure 258; safety-, for furnaces (Beling) P 288; greaseless glass (Stock) 765; electrolytic (Schulze) 1007, 3150; self-lubricating bearing for slide- (Loudenbeck) P 1099; packing for stems (Daum) P 1374; on vertical pipes of tar receivers (Schuler) P 1388; compn. for, disks (Aylsworth) P 1671; gas, for gas firing (Berlin, etc.) P 2449; Zn wearing faces of pump (Platt) P 2218; for kilns (Jansen) P 2579.

Vanadates in vegetables (Ramirez) 2418.

Vanadic acid from Lake Superior (Schaller) 1447; heteropoly acids contg. (Prandtl) 2744; complexes of, with citric acid (Barbieri) 3038.

Vanadium, culture of *A. niger, Sterigmatocystis nigra* in media contg (Javillier) 924; in Fe ore—behavior in production of Fe (Blum) 1165; production (Hess) 1271; variation with temp. of spectrum of (King) 1577; behavior toward Si, Ni, Cu and Ag (Giebelhausen) 2216; and plant growth (Ramirez) 2418; heteropoly acids contg. (Prandtl) 2744; review 2755.

Vanadium, analysis (McCabe) 39; in Thomas meal (Holle) 348; in steel (Rich) 1286 (Dougherty) 1727; by $Na_2S_2O_3$ (Oberhelman) 1727; in Fe-V (Heinzelmann) 2044; (Rodeja) 2201; sepn. from P (Rodeja) 2202.

Vanadium, metallurgy of ores high in P (Vogt) P 1027; (Anon.) 2368; from oxide to steel (Bleecker) 2758.

Vanadium alloys, Fe-V (Alzugary) 286; Al-V (Clark) 3204.

Vanadium chlorides, heat of formation of (Ruff) 1867.

Vanadium compounds, complexes of vanadic acid with citric acid (Barbieri) 3038; (Oefele) P 3333.

Vanadium deposits, in Mich. (McGhee) 282.

Vanadium ferrocyanides (Levi) 2627.

Vanadium ores, new (Hess) 426.

Vanadium oxides (Davis) P 237; heat of formation of V_2O_5 (Ruff) 1867.

Vanadylsalicylates (Barbieri) 1477.

Vanadyltartaric acid, metallic salts (Barbieri) 617.

Vanadylurea compds (Barbieri) 2851.

Vanadylurea bromide (Barbieri) 2851.

Vanadylurea iodide (Barbieri) 2852.

Vanadylurea perchlorate (Barbieri) 2851.

Vanadylurea periodide sulfate (Barbieri) 2852.

Van der Waals formula, gas equil. and test of (Scheffer) 1562; and heat of vaporization (Sutton) 1575.

Vanilla extracts, detecting coumarin in (Dean) 1946; acidity and ash of (Winton) 1946. analyses of (Paul) 3105.

Vanillin, some derivs. of *o*- (Perkin) 199; oxime and derivs. (Brady) 206; reaction with albumin (Häussler) 921; field test with (Skinner) 948; α-naphthylhydrazone, etc. (Padoa) 1319; (Boehringer & Soehne) 1365; detection in quinine wines (Chauvin) 1529; condensation with aromatic amines (Wheeler) 1772; reactions of (Häussler) 1887; compds. with Fe (Weinland) 2083; (Lehmann) 2288.

Vanillylidenearylamines, polymorphic, produced by trituration and light (Senier) 1906 4,4'-diphenylsemicarbazone (Toschi) 1388

Digitized by Google

2 - *o* - Vanillylidene - 5,6 - dimethoxy - 1 - hydrindone (Perkin) 200.
Van Slyke method for amino N detn. (Strauss) 3254.
Van Swieten's liquor (Bilancioni) 3302
Vapor density. See *Density.*
Vaporization of H_3AsO_3 from solns. contg. HCl (Smart) 277; of fuel oil (Irinyi) 1111; entropy of (Hildebrand) 1423; velocity of benzine (Meneghini) 1993; of C (Lummer) 2351.
Vapor pressure, calcn. of curves (Cederberg) 262; of Pt and Mo (Langmuir) 263; hypothesis of contraction of striated muscle (Roaf) 331; detg. (Campbell) 402; partial, of ternary mixts. of toluene, CCl_4, and $C_2H_4Br_2$ (Rosanoff) 402; of alc solns. (Tower) 403 (Price) 1416; detg. diff. between, of soln. and that of solvent (Frazer) 403; of acetone-$CHCl_3$ and temp. (Beckmann) 747; of halogen hydrides and of H_2S (Maass) 876; lines of system P (Smits) 986, 987, 2731; of O and N (Onnes) (Crommelin) 988; measuring, lowering (Washburn) 1143; of I (Baxter) 1414; of H (Onnes) 2023; of sugar solns. (Wood) 2179; of As_2O_3 (Welsh) 2210; of C_2H_6 and C_2H_6 (Burrell) 2350; of binary mixts. (Campbell) 2176; of propane, propylene and normal butane (Burrell) 2614; of liquids in presence of gases (Campbell) 2614; heat effect of soln. and (Leval't-Ezerskii) 3003; unmixing in binary system in which 3-phase pressure is greater than sum of, of components (Scheffer) 3024; of water (Crafts) 3151; detn. of, at low temps. (Gil) 3151; in ternary systems (Jorrisen) 3151; of liquid C_2H_2, NH_3 and isobutane (Burrell) 3152; of Tl amalgams (Hildebrand) 3152.
Vapors, removing dust from (Herbing) P 5; condensation of acid (Leblanc) P 133; measuring consumption of (Nitzschmann) 397; influence on muffles in Zn furnaces (Proske) 429; behavior of jellies toward (Wolff) 546; mol. consts. of (Pochettino) 548; luminous, distd. from arc (Strutt) 550; recovering, of vplatile liquids (Parr) P 964; sepg. solids and liquids from (Reichling) P 1139; measuring elec. cond. above 1500° of (Northrup) 1144; conducting acid (Deutsche Ton- etc.) P 1263; ignition of mixts. of inflammable and air (Hofsäss) 1384, sp. heats of (Pagliani) 1574; corpuscular radiation liberated in, by homogeneous X-radiation (Moore) 1718; from drying paint (King) 1848; sepg., mixts. (Behrens) P 1980, 2441; removing from condensers (Gensecke) P 2011; film between a liquid and its satd. (Mebius) 2022; condensation of (Lenard) 2174; collecting metal (Helfenstein etc.) P 2192; destroying obnoxious, in distn. of NH_3 water (Becker) P 2308; meter (Österreich. etc.) P 2332; inhalation of irritant (Symes) 2402; theory of aq. (Mostovich) 3018; light emission of metal, in glow discharge (Janicki) 3150.
Varnish, progress in, ind. (Rngg) 157 (Fahrion) 2458; detg. body and solvent in (Brown) 248; for balloon covers 386; solvents for (Frank) 386; Painters' Colors, Oils and (Hurst, book) 387; contg. non-drying and mineral oils 530; of cellulose acetate (Clément) 1253; prep. of spar, coach and rubbing 1398; analysis (Darner) 1696; field gray (Zimmer) 1848; Lack und Firnis-Fabrik, Die Fabrikation der Lacke, Firnisse, Buchdrucker-Firnisse und des Siegellackes (Andes, Erwin, book) 2000; Chinese wood oil (Ware) 2459; (Pooth) 2600; Die Fabrikation der Lacke, Firnisse, u. s. w. (Andres, book) 2988; Die Fabrikation die Oellacke und Siccative (Stock, book) 2988; Handbuch der Lack- und Firnis-Industrie (Seeligmann, Zicke, book) 2988; detection of Mn in (Sacher) 3134. *Patents:* (Plüss) 158; (Rosenberg) 726; clarifier (Mason) 726; substitute for linseed-oil (Waentig) 726, 2318; substitutes (Kaempfe) 972 (Waentig) 2320; (Walker) 1126; from paracoumarone and paraindene (Lender) 1127; (Behnisch) 1254; (Eichler) 1398; for linoleum (Girzik) 1398; black dye for coloring (Reissmann) 1398; resin-like products (Badische) 1399; (Chem. Fab. Buckau etc.) 1399; pyroxylin (Kniffen) 1547; (Aylsworth) 1696; from cellulose derivs. (Zapon-Lack-Ges.) 1850; zapon (Chem. Fab. Greisheim, etc.) 1850; submarine (Paternò) 2155; (Griesheim-Elektron) 2156; (Griesheim-Elektron) 2319; dissolving dried (Gottschalk) 2320; oil (Reichhold) 2460; insulating (Baeder) 2715; (Hardcastle) 3136; bronze **powder** (Fehringer) 3369; app. for cleaning used (Schön) 3370; see also *Driers.*

book) 1214; Les eaux minérales alcalines de Roumanie (Saabner-Tuduri, book) 1214; radioactivity of, at Hot Springs, Va. (Hemmeter) 1271; Sharp Point hot spring (Clapp) 1292; of Salsomaggiore (Nasini) 1293; conc. of electrolytes of, and rate of nerve-conduction of *Cassiopea* (Mayer) 1349; changes in salinity and effects on regeneration of *Cassiopea xamachana* (Goldfarb) 1350; of coastal plain of Ga. (Stephenson) (Dole) 1357; poisoning by HgCl after drinking Vichy (Spindler) 1509; hot spring (Rupp) 1518; distg. sea- (Söderlund) P 1524 (Golz) 1644; Ra in, from Gulf of Mexico (Lloyd) 1581; for irrigation in California (Bryan) 1592; of Salton Sea (Vinson) 1652; compn. of port. cement mortars in sea- (Giorgis) 1679; radioactive (von Höfer) 1714; saline springs of Manitoba (Cole) 1891; misbranding of Allouez 1954; of southeastern part of Texas coastal plain (Deussen) 1954; radioactivity of "Kuvak" springs (Veimarn) 2032; radioactivity of Borzhom springs (Burkser) 2032; Reichenhaller salt springs (Gillitzer) 2048; capillary const. of sea- (Berget) 2171; solubility of $MgCO_3$ in (Wells) 2206; chem. compn. of, of "Kuvak" springs and cause of pollution (Veimarn) 2276; phys. and chem. consts. of (Bordas) 2276; in Dakota sand (Huntley) 2367; making water bearing strata watertight (François) P 2581; S in (Shelton) 2753; compn. of Fe-Mn-As, of Tartavalle (Bertoni) 2785; detn. of H ion concn. in (Palitzsch) 2918; reaction of fishes to decompn. products in sea- (Shelford) 2947; reflex action of O content of, on respiration of fishes (Petrik) 2947; gaging flow of streams (Collett) 2954; radioactivity of Roumanian (Giurgea) 3024; combustible gases in (Hauser) 3145; radioactivity of waters in Norway (Poulsson) 3169; nutrition of aquatic animals by dissolved org. compds. of (Lipschütz) 3303; changes in mineral, on standing in metallic vessels (Giurgea) 3312; mineral waters of Roumania (Giurgea) 3312; use of wood and concrete in structures standing in sea- (Taft) 3346.

Water supply, resources of Ill. (Horton) 228; for boiler (French) 341; approval of, plans by state board of health (Higgins) 343; progress in (Hazen) 674; Buffalo (Norton) 829; lab. control (Barton) 829, municipal (Mitchell) 829; review 1210; of San Francisco 1210; Passaic Valley pumping station 1210; state control in Kansas (Anon.) 1210 (Hesser) 2956; in Philippine Is. (Cox) 1210; of Wurttemberg, Germany (Gross) 1210; of coastal plain of Ga. (Stephenson) (Dole) 1357; in Bermudas (Kershaw) 1358; Ontario (Dallyn) 1520; war-time, problems (Weldon) 1521; of German cities of more than 10,000 population (Bunte) 1645; of Bayreuth, Germany (Brunner) 1645; of Würzburg, Germany (Zimpell) 1645; and typhoid fever at Cumberland, Md. (Fowler) 1953; of Niles cone, California (Clark) 1735; of Rome (Giardi) 1955; of Brealau, Germany (Lührig) 1955; of Annecy in Upper Savoy (Thiem) 1956; biochem. and engineering aspects of sanitary (Fuller) 2276; of city of Halle a/S (Precht) 2278; sanitary features of Los Angeles aqueduct (Slater) 2278; at Ymuiden 2409; of Iloilo (Heise) 2409; Madison, Ind. (Moore) 2409; of Long View, Texas (Green) 2681; bureaus of (Bartow) 2784; ground water for irrigation in Sacramento Valley, Cal. (Bryan) 2785; stream gaging stations and publications on resources 1885–1913—drainage basins (Wood) 2785; surface waters of Iowa (Hoyt) 2785; potash liquors and (Tjaden) 2955; at Port Hope, Ont. 2957; of soldiers in the field (Strell) (Christian) 3313; Country Plumbing Practice (Hutton, book) 3314.

Water vapor, action on $Ba(CN)_2$ (Rolla) 767; X-rays and condensation of (Strieder) 2034; contact action of, and C in oxidation of ferrous compds. (Doroshevskii) 2177; absorption spectrum (Eucken) 2622; fusibility of coal ash in mixts. of H and (Fieldner) 2808; see also *Steam*.

Wattle bark for tanning 1554; of Brit. colonies 2464.

Wave form, effect on chem. action of silent elec. discharge in O_3 formation (Lechner) 2737.

Wave length, normals (Eversheim) 17; of H lines (Curtis) 18; absorption and, for X-rays (Siegbahn) 175; in ultraviolet Fe spectrum (Burns) 1424; active, of color filters (Pirani) 2030; in spectrum of Ne (Meggers) 3021; interference measurements of, in Fe spectrum (Burns) 3021.

Wave-number, system of Ru (Paulson) 2029.

Wax cloth (Jaek) P 2156.

Waxes, enzymes that decompose, in organs (Porter) 212; of textile fibers (Higgins) 246; detg. unsapon. matter (Rather) 388; rev. for 1913 (Herbig) 530; candelilla (Berg) 728; meliponen and bumblebee (Fischer) 867; exam. of floor (Besson) 971, 2459; m. and applying (Macco) P 1129; waxing thread (Bates) P 1251; impregnating paper with (Stephen) (Carter) P 1843; for waterproofing thread (Vest) P 1846; Exam. of Saponifiable (Holde, book) 1852; Chem. Technology and Analysis of (Lewkowitsch, book) 1852; m. p. of paraffin (Small) 2009; solidity of colophonium-wax mixts. (Hauser) 2022; cane (Cross) 2721; sepn. from straw (Heuser) 2980; from viking ship (Fischer) 2989.

Weathering of marble and limestones (Merrill) 2368.

Weatherproofing paint (Brenneisen) P 2156.

Weaving, Jute and Linen (Woodhouse, Milne, book) 529.

Weeds, chem. compn. of—value as feed and fertilizer (Kling) 1652.

"Weender" method, crude fiber estn. (Fanto) 1950.

Wood blocks. See *Paving.*

Wood borer, toxicity of creosote for *Xylotrya* (Shackell) 704.

Wood oils, Chinese 247; preventing gelatinization (Reisert) P 388; treating (Beringer) P 972; Index to Patents, Technology and Bibliography of China (Stevens, Armitage, book) 1551; methods of using China (Krumbharr) 2155; Chinese, varnishes (Ware) 2459.

Wood pulp, wall-board (Thickens) P 377; variation in length of fibers (Shepard) 713; balsam fir as 714; (Denso) P 862; pulping app. (Hall) P 1246; (Beniamino) P 2312; strainer for (Thoresen) P 2588; see also *Paper pulp.*

Wool, purifying raw (Koch) P 155; extg., acidifying and washing (Bernhardt) P 385; degreasing (Heymann) P 529; black specks in, textiles (Herzinger) 719; action of Na_2SO_4 on (Fort) 1120 (Bland) 3365; treating, cheeses, cops, etc. (Heymann) P 1549; drying (Stone) P 1695; treating to prevent shrinking (Garrett) P 1695, 2455; wastes (Russell) 2281; cleaning (Koch) P 2457; scouring (Chambers) P 3133; purification of, fats (Marcusson) 3137; use of Turkone oil in dyeing (Schonherr) 3365; dressing, rugs (Brumwell) 3377; see also *Dyeing.*

Work, elimination of NaCl in perspiration during (Viale) 97; metabolism during mental (Becker) 816; effects on mechanical properties of metals (Huntington) 1295; muscular, and respiratory quotient (Morgulis) 1930; changes in blood during (Schneider) 1932; protein metabolism during (Kocher) 2928; effect on blood—detg. circulation rate in man at (Boothby) 3283; see also *Muscle.*

Wormwood, oil of Italian (Paolini) 1323.

Wort, nitrogenous material in 234; lab. mashing methods and N compds. in (Ehrich) 350; mashing temps. and comp. of (Ehrich) 350; extg. (Ramsden) P 351; detg. mineral constituents in (Schönfeld) 690; mashing waters and (Ehrich) 842; color detn. of (Schnegg) 1222; filter-plate for (Schaefer) P 1658; extg., from brewer's grains (Schaefer) P 1968; sucrose as additional mashing material (Koritschoner) 2123; preservation (Schönfeld) 2123; removing bitter taste and burnt smell and taste from (Cantor) P 2285; compn. of beer (Moufang) 2562; of 1914—protein and mineral content (Schönfeld) 2965; see also *Brewing.*

Wounds, P in (Henri) 1940; application of HClO (Smith) 2919; antiseptic substances in treatment of infected (Dakin) 2943; treatment by electrolytic bath (Fowler) 3302.

Writing tablets of pottery ware (Steingutfab. Grünstadt) P 1234.

Wulfenite, synthetic (Dittler) 575.

Wurtzite, formation of (Allen) (Merwin) 187; constitution of (Beutell) 2495.

Xanthic acid, polymerized cellulose ester (Lilienfeld) P 3359.

Xanthine derivatives (Jacobs) (Golowinski) 937.

Xanthi yoka (Pannain) 1224.

β-Xanthobutyric acid (Lovén) 2650.

Xanthomatosis (Chalatov) 479.

Xanthophyll, prepg., from grass (Ewart) 3084.

Xanthydrol in detn. of urea (Hugounenq) (Fosse) 1628; in urine analysis (Maestro) 2911.

X-Rays. See *Rays, Rönigen.*

Xylene bromination (Ducellier) 787; tolyl esters and toluidides of the nitrosulfonic acids of *p* (Huston) 2654; action of trioxymethylene on *p*- (Histon) 2900.

***sym-m*-Xylenol,** aceto derivs. of (v. Auwers) 1057.

Xylidines, polymorphism of derivs. of (Senier) 202; vanillylidene derivs. of (Senier) 1986, polymorphic anisylidene derivs. of (Senier) 3228.

Xylidinium hexabromoösmiate (Guthier) 1440.

Xylohexosaminic acid and derivs. (Levene) 2078.

***p*-Xyloquinone,** action of aminobenzoic acids on (Suchanek) 913.

Xylose, cupric reducing power of (Daish) 41.

Xylotrya, toxicity of creosote for (Shackell) 704.

Digitized by Google

2 - *as* - *m* - Xylylazo - 1 - naphthol and Me and Et ethers, etc. (Charrier) 793.

***o* - Xylyl bromomethyl ketone**, *o*- and *m*-, and derivs. (Jacobs) 2077.

Xylylene dichloride, *o*- and *m*-, compd. with $(CH_2)_6N_4$ (Jacobs) 1611.

Xylylhydrazones and phototropy (Padoa) 1318–9.

1,3,4 - Xylylosazones and phototropy (Padoa) 1320.

Yama-nikkei, oil of bark (Schimmel & Co.) 2692.

Yangonin and derivs. (Borsche) 312.

Yarn, dyeing and washing (Hennig) P 155; paper and cellulose (Süvern) 1390; from crude wood wool (Rotter) P 1395; from hydrated cellulose (Pellerin) P 1396; bleaching (MacIlwaine) P 1550; moistening (Schilde) P 2152.

Yeasts, production of *n*-hexyl alc. by (Neuberg) 58; transformation of $Na_2S_2O_3$ into H_2S and Na_2SO_3 by (Neuberg) 58; reduction of cinnamaldehyde by (Rona) 58; assimilation of nourishment by (Rubner) 93; peptic strength of (Bokorny) 349; utilization of AcH by (Kostychev) 471; change in content of glycogen, N and enzyme in living (Kullberg) 471; fermentative action of fresh, in presence of antiseptics (Neuberg) 472; carboxylase in juice of top (Neuberg) 472; metabolism (Waterman) 476; removing fermentation foam in air, manuf. (Wulf) P 506; improving beer (Nydrle) P 506; cultivation of pure (Engelhard) 506; new phosphoric ester by aid of, juice (Harden) 612; and nitrates (Kossowicz) 641; temp. and invertase in (Meisenheimer) 641; as foodstuff and medicine (Mooser) 672; detg. mineral constituents in (Schönfeld) 690; for beet mash (Lange) 690; prepg., for fermentation of molasses (Molhant) P 691; nucleotides of yeast nucleic acid (Jones) 810; beer, in industry and therapy (Carlinfanti) 841; alc. content of (Foth) 842; org. acids and (Zikes) 842; simultaneous change in content of glycogen, N and enzyme in (Salkowski) 921; staining cells (Matthews) 923; fixation of N by (Kossowicz) 1070; influence on ester content of beers (Windisch) 1089; fermentation of carbohydrates by (Euler) 1188; differentiation of (Lichtenstein) 1189 (Linder) 1657; in wine making (Bioletti) 1221; influence of radioactive emanations on (Jacquemin) 1221; vinification by ferments other than wine (Martinand) 1221; pressed (Reavenall) 1222; refermentation of ("Becco," Ges. etc.) P 1223; (Reik) P 1223; prepg. strong invertase solns. from (Hudson) 1342; pure, in cider vinegar manuf. (Cruess) 1350; Mn and (Bokorny) 1510; protein synthesis in (Zaleski) 1796; protein transformation in (Zaleski) 1796; stability of enzymes (Bau) 1823; fermentation of raw sugar by (Nagel) 1824; working up raw sugars into Brewer's (Reinke) 1824; marine (Coupin) 1928; baking with (Ostwald) 1951; production from sugar and mineral salts (Marbach) 1967; measurement of, fermentation (Wolff) 1967; wine prep. with selected (Zanettini) 1967; acceleration of fermentation by dead (Moufang) 2124; as food for stock (Crowther) 2274; feeding expts. with swine (Klein) 2274; top-fermenting and their sugar transforming capacity (Schönfeld) 2284; pressing (Scott) 2561; removing unpleasant taste from (Versuchs- etc.) P 2564 (Docherty) P 2784; peroxidase in beer (Bach) 2659; utilization by animal organism (Völtz) 2661; activation exerted by beer, on gastric juice (Piccoli) 2767; protein from inorg. N compds. (Donath) 2768; influence of org. acids on (Buromskii) 2772; dry, as feed for milk production (Völtz) 2774; influence of NaOH on glucosidase from bottom (Bourquelot) 2896; coenzyme (Hagman) 2919; a. c. and fermentation by (Hägglund) 2920; feed value (Völtz) 2952; action of enzymes on carbohydrates of (Giaja) 3075; enzymes (Neuberg) 3075; change in alc. and aldehyde content of, on standing and during autolysis (Neuberg) 3084; expts. on enrichment of crude alc. with higher alcs. by vitality of (Heinzelmann) 3324; nitrogenous substances of (Meisenheimer) 3324; protein of (Neuberg) 3325; influence of killed, on digestive enzymes (Winckel) 3252; synthesis of albumin from NH_3 by 3254; thermoregeneration of diastases of (Bertrand) 3258; peptone from cells of beer (Vlahuta) 3266; see also *Fermentation*.

Yew (Jensen) 2403.

Ylang-ylang oil (Schimmel & Co.) 2692; modification of, standards (Gibbs) 3140.

Yoghurt, prep. (Brockhaus & Co.) P 340; beer (Versuchs-und, etc.) P 506; bacillus (Duchacek) 2920.

Yohimbic acid, Ba salt (Barger) 2889.

Yohimbine, pharmacology of (Loewy) 661; (Barger) 2888.

Yohimbinesulfonic acid (Barger) 2889.

Young's modulus, temp. coeff. (Harrison) 2215.

Yttrium ethyl sulfate, morphotropic relations to Et sulfates of other rare elements (Jaeger) 990.

Yttrofluorite, fluorite-, group (Vogt) 575.

Zapon varnishes (Chem.-Fab. Greisheim etc.) P 1850.

Zeagonite (Thugutt) 578.

Zeeman effect (Voigt) 13; (du Bois) 751; (Murani) 407; anomalous, in satellites of violet line of Hg (Nagaoka) 1001; magneto-optical absorption effect (Voigt) 1002; for series lines (Voigt) 1002.

Zein, protective enzymes against (Nitzescu) 98; proteoses from (Underhill) 3252.

Zeolites, art. (Duggan) P 114 (Gans) P 1083; art., -permutit (Kocsor) 944; (Brünn) P 2573.

Zero, absolute (Dushman) 547, 1141.

Zinc, allotropy of (Benedicks) 260 (Cohen) 1267; ind. in 1914 284; pipes for water (Rinck) 341; spectrum (Eder) 408; corrosion of (Prost) 435; polymorphism of (Petrenko) 735; system: Mg–Cd– (Jänecke) 895; displacements in spectral lines of (Morrow) 1578; action on water (Jorissen) 1597; cathodic deposition (Mazzucchelli) 1719; photoelec. behavior (Küstner) 2031; influence of impurities on (Freeman) 2212; detg. thickness of, coating on galvanized Fe objects (Bauer) 2217; physico-chem. study (Cohen) 2339; displacement of metals from soln. by (Tzentnershver) 2475, 2828; Ni-plating (Weber) 2739; electrodeposition of, on surface of solns. (Titov) 3031; ionization potential and spectrum of (McLennan) 3155; period of induction and passivity of (Tzentnershver) 3160; m. p. (Kaye) 3161; pptn. by H_2O_2 of Mn from ammoniacal solns. in presence of (Walker) 3188; molten, as reagent for macroscopic etching of Fe and steel (Jones) 3207; action of H_2O on (Isnardi) 3211; Brit., works 3332. *Patents:* Coating inside of, containers (Waitt) 26; receivers of, furnaces (Laue) 1028 (Meguin & Co.) 1172 (Metallw. Unterweser, etc.) 2505; electrodeposition of (Larson) 1880; sponge (Griesheim-Elek.) 2193; pure rolled (Platt) 2218; coating Fe or steel with (Skemp) 2218; see also *Galvanizing.*

Zinc, analysis, pptn. with $(NH_4)_2S$ (Seeligmann) 40, 1884; in treated wood (Bedford) 139; Cd in (Cooper) 185; sepn. from As (Balls) 277; estg. moisture in Zn ashes (Lewis) 423; cyanometric detn. (Treadwell) 899; in art. mineral waters (Reese) 1517; detn. in ores and pyrites cinders (Rubricius) 1729; detn. as $ZnNH_4PO_4$ (Artmann) 1885; (Van Pelt) 2361; in Al alloys (Weirick) 2630; dust pptn. tests (Herz) 2631.

Zinc, metallurgy of, Nassau works (Leslie) 47; at Langeloth, Pa. (Ingalls) 192; treatment of Zn-Au slime (White) 193; in 1914 284; (Riter) 429; elec. (dry) (Lordier) 557; elec. (wet) (Sylvany) 558; elec. smelting (Ingalls) 890; leaching Zn lime-ores with acids (Ralston) 1023; (Siebenthal) 1024; continuous production in blast furnace (Rzehulka) 1594; (Juretzka) 1739; roasting Zn blende (Schütz) 1739; Die Röstung der Zinkblende und die thermochemischen Vorgänge bei diesem metallurgischen Prozesse (Rzehulka, book) 1894; mining and milling (Wright) 2210; (Leslie) 2502; development in U. S. (Stone) 2755; economics of (Ingalls) 2755; magnetic sepn. of Zn-Fe sulfide ores 2865; elec. smelting (Johnson) 3171. *Patents:* (Wagner) 26; (Herter) 29; (Hyde) 51; elec. furnace for (Ruhoff) 269 (Comp pour le traitement) 1280 (Johnson) 2626 (Hampton) 2741; of S and O ores (Borchers) 271; recovery from solns. (Buddeus) 287; roasting (Buddeus) 288; S ores (Birkeland) 288 (Ashcroft) 908 (Langguth) 2219; (Côte) 290; (Woltereck) 292; distg. furnace (Hantelmann) 292 (Thierry) 414 (Roitzheim) 2759; removing, from Zn-coated metals (Weber) 437; electrolytic (Borchgrewink) 564; removing Zn blende from concentrates (Emerson) 780; (Durant) 781; furnace (Lanyon) 781 (Zavelberg) 1455 (Specketer) 2506; recovering (Timm) 783 (Hills) 1744; (Specketer) 908; roasting blende (Buddeus) 908; removing Cd from (Rigg) 1027; extg., from alloys or mixts. (Spitz) 1027; desd-roasting Zn blende (Quineau) 1154; (Rudolph) 1434; muffle furnace (Koppers) 1028, 2377 (Engels) 1455; briquets for furnaces (Brooks) 1600; sepn. of ZnS and PbS in ores (Rose) (Lyster) 2055; concg. ores contg Pb (Lavers) 2218; complex ZnS ores (Kingsley) 2219; working, retorts (Reitzheim) 2219; continuous (Hyde) 2219; sepg. S compds. of, from other ores (Langguth) 2221; (Highfield) 2352; condenser (Johansson) 2376; (Johnson) 2376; (Specketer) 2377; (Doherty) 2638; recovering residual minerals from calcareous final tailings (Spencer) 2758; furnace for reducing ZnO (Highfield) 3034; elec. (Cote) P 3177; (Borchers) 3197; sulfide and sulfate S on reduction of roasted blende (Lindt) 3198; working up of Hg-bearing by-products in Zn plants (Juretzka) 3199; (Best) P 3213, 3214; (Peacock) P 3214; Zn-bearing slag (Truax) P 3214; sepg. Pb from Zn in sulfide ores (Bechi) P 3215; selective flotation of (Owen) P 3216.

Zinc alloys with Fe (Taboury) (Le Chatelier) 49; microchem. of corrosion (Whyte) 432; with Ag and Pb (Bogitch) 432; soln. velocity in HCl (Centnerswer) 745; elec. cond. of (Petrenko) 777; hardness of system Ag–Zn (Petrenko) 777; α,β- with Cu (Whyte) 1294; Cu–Zn and Cu–Zn–Pb (Parravano) 1453; hardness of Cu–Zn (Meneghini) 1453, 3206; with Mn (Parravano) 1454; with Cd (Kammerer) P 2869; Cu–Sn–Zn (Hoyt) 3205 (Rawdon) 3208.

Zinc ammines (Ephraim) 2195.

Zinc-ammonia tetrathionate (Calsolari) 2845.

Zinc ammonium phosphate, detg. Zn as (Artmann) 1885.

Zinc azide (Wöhler) 1115.

Zinc blende. See *Zinc sulfide.*

Zinc chloride, purifying, solns. contg. dissolved ferric salts (Lawton) P 1671; action on hydroxystearic and ricinoleic glycerides (Fokin) 1896; in wood preservation (Goltra) 2138; influence on tendering of cloth during singeing (Thomson) 3132; hydrolysis of (Sordelli) 3185.

Zinc compounds, synthesis by means of org (Blaise) 786 (Wohlgemuth) 1602, 1310, 2057.

Zinc deposits of northwestern Ill. (Cox) 579; of eastern Tennessee (Nason) 1591; geol anatomy of Tenn. Zn mine (Nason) 2633.

Zinc-dibraunite (Nenadkevich) 1446.

Zinc dioxalodiaquochromiate (Werner) 35

Digitized by Google

Zinc dioxalohydroxoaquochromiate (Werner) 36.
Zinc green 3134.
Zinc hexaamine chlorate (Ephraim) 2194.
Zinc hydroxide-ammonia and rhamnose (Windaus) 623.
Zincing. See *Galvanising.*
Zinc ores, formation of oxidized, from sulfide (Wang) 2752.
Zinc oxides, ZnO (Stuckle) P 130; influence of ZnO on celluloid (Nishida) 148; use of ZnO in detg. Mn (Massinon) 185; absorption of ZnO by clay of muffles (Proske) 429; ZnO (Cochlovius) P 516; extn. of Pb from ZnO (Tenenbaum) P 594; from Sardinia (Ferraris) 968; ZnO_2 (Riesenfeldt) 1018; ointment of ZnO (Jones) 1531; from waste liquors from wet Cu extn. (Asef) P 1535; ZnO (Erzverwertungs-Ges.) P 2601 (Ferrère) P 2715, 3121; from low-grade carbonate ore 3134; ZnO (Hunebelle) P 3338.
Zinc perborate (Weber) P 358; (Henkel et Cie) P 1979, 2428.
Zinc salts, recovering (Bourgeot) P 29 (Buddeus) P 1229; leaching of, in wood preservation (Angier) 2138; in Ag extn. (Morris) 2865.
Zinc sulfate (Araki) P 132; crude (Llopart) P 1849; soln. (Hunt) P 1979; production (Llopart) P 2295, 3136.
Zinc sulfide, crystn. of (Merwin) 42; velocity of soln. of Zn blende in H_2SO_4 (Rosenkränzer) 276; pigment of $CaSO_4$ and (Carpenter) P 2459.
Zinc sulfite (Ferrère) P 3121.
Zinc tetraammine chlorate (Ephraim) 2194.
Zinc tetraammine iodate (Ephraim) 2194.
Zinc tetrathionate-pyridine (Calzolari) 2845.
Zinnwaldite (Asch) 3194.
Zircon, ferrite halos around (Grengg) 188.
Zirconium, electrolytic sepn. of Ce, Th and (Dennis) P 27; mordants (Wengraf) 381; Die elektrischen Metallfaden-glühlampen aus Zircon (Weber, book) 1009.
Zirconium, analysis, sepn. of Zr from Al (Ferrari) 1019.
Zirconium oxides (Meyer) 362; refractory utensils of (Arnold) P 363; refractory properties (Meyer) 2136.
Zymase and antiseptic agents (Neuberg) 472; relation to carboxylase (Neuberg) 3076; activity of (Abderhalden) 3255.
Zymogens (Pribram) 2097; detecting, in molds (Henneberg) 2903.

LIST OF PERIODICALS ABSTRACTED

Each of the 671 periodicals listed below is examined systematically and abstracts are published of all original papers which may be considered as possibly new contributions to chemistry in any of its phases. If anyone knows of a publication which is likely to contain such papers and which is not in this list, the editor will appreciate hearing of it. In addition to the full titles and official abbreviations the dates of appearance, 1915 volume, price and name and address of the publisher are given, the last so that originals can be conveniently ordered in case more than the abstract is wanted. In a few cases this additional information has been omitted because of the fact that the periodicals concerned have, in so far as can be determined, been discontinued, apparently on account of the war. These have been retained on the list because some of them may be expected to be published again later. A dagger (†) after the title is used to indicate the discontinued ones.

Title and Order.—In the full titles given, the letters which constitute the official abbreviation used in the abstracts are printed in black type. Thus, the abbreviation of The American Journal of Science is *Am. J. Sci.*

The names of the periodicals are arranged in the alphabetical order *of their abbreviations.*

Dates of Appearance.—The following symbols are used: *a* annual, *sa* semiannual, *q* quarterly, *bm* bimonthly, *m* monthly, *sm* semimonthly, *bw* biweekly, *w* weekly, *sw* semiweekly, *irr* irregular.

Volume.—If the number of volumes per year is other than 1, the number is next given. The volume number of the first issue in 1915 is printed in black type; if the first issue is not number 1 of the volume its number is given in parenthesis after the volume number. In some cases the "whole number" is given in this way. If the volume number belongs to a new series, this is indicated in brackets placed before the volume; thus, [3] **29** (4), states that the first issue in 1915 is number 4 of volume 29 of series 3.

Price.—The abbreviation *d* following a price means "domestic" (that is, in the country of publication); *f* means "foreign" (Postal Union). Prices in parenthesis are for single numbers; prices not so enclosed, unless otherwise stated, are for a *year's* subscription. In some instances an asterisk is used to indicate that the members of some organization enjoy a lower rate than that given. M = mark ($0.238), pfg. = pfennig (1/4 cent), F = franc ($0.193), L = lira ($0.193), K = krone (Austria-Hungary, $0.203), or krona (Sweden, $0.268), R = ruble ($0.515), G = gulden ($0.402), s. = shilling ($0.243), d. = penny (2 cents).

Publisher.—The name and address of the publisher or person to whom orders are to be sent are given in italics.

Example.—Full title of periodical, The American Journal of Science. Abbreviation, *Am. J. Sci.* Monthly, two volumes a year. The first issue in 1915 is volume 39, No. 229. Price of a year's subscription, $6 in the United States, $6.25 in Canada, $6.40 anywhere in the Postal Union. Subscriptions may be sent to New Haven, Conn.

Great pains have been taken to make the following information strictly accurate, but it is collected from many sources and the editor will not hold himself responsible for errors in it.

TABLES OF PROPERTIES

of over Fifteen Hundred Common Inorganic Substances

By Wilhelm Segerblom, A.B., Instructor in chemistry at The Phillips Exeter Academy, Exeter, N. H. An indispensable reference book for chemists, manufacturers, and science teachers. Gives common names, chemical and physical properties, and solubilities of common chemicals. 8vo, x + 144 pages. Cloth. $3.00 (prepaid).

Also FIRST YEAR CHEMISTRY, a modern elementary text by the same author. Cloth, $1.50 (prepaid).

Specimen pages of either book sent FREE upon request.

EXETER BOOK PUBLISHING COMPANY, EXETER, NEW HAMPSHIRE

QUALITATIVE ANALYSIS

For the Last Three Months of Freshman Chemistry

The simplest possible system of Qualitative, compact but complete. Gives the student of General Chemistry a discipline in system and comparison—shows him the application of a great number of apparently unrelated facts.

Such simplified Qualitative in the first year arouses interest at a critical time and holds the student for advanced chemistry! ***Pocket size. 25 cents.***

Written and published by

HARRY N. HOLMES, Ph.D.

Professor of Chemistry, Oberlin College, Oberlin, Ohio.

SEE the "Journal of Industrial and Engineering Chemistry" for Display Advertisements of Machinery, Equipment and Supplies used in Chemical and Metallurgical operations.

Wanted—Back Numbers

of the

American Chemical Society Journals

The Society is anxious to complete certain volumes of its publications which are nearly exhausted, and for which there is a heavy demand.

The Society will Buy.

The amount indicated is offered for the publications named, subject to withdrawal without notice. Only those listed below are desired. Publications are to be sent carriage-free to the Secretary and must be received in good condition.

Journal American Chemical Society.

Vol. 17; No. 1, 75 cents; No. 8, $1.50.
Vol. 18; No. 5, $1.25; No. 8, 50 cents.
Vol. 19; No. 1, $1.50; No. 3, 50 cents.
Vol. 20; No. 3, $1.50; No. 4, 50 cents.
Vol. 21; No. 12, 50 cents.
Vol. 22; No. 3, $1.50; No. 11, 50 cents.
Vol. 35; No. 9, 50 cents.

Chemical Abstracts

Vol. 1; Nos. 3, 12, 13, 14, 15 and 16, 25 cents each.

Journal Industrial and Engineering Chemistry.

Vol. 1; Nos. 3, 6, 7 and 12, 25 cents each.
Vol. 6; Nos. 5, 6 and 8, 25 cents each.
Vol. 6; No. 7, 50 cents.

Libraries and members of the Society are urgently requested to examine their files for extra numbers mentioned above.

All communications should be addressed to

CHARLES L. PARSONS, *Secretary*,

Box 505, Washington, D. C.
